

ZERO • JZ: Zero-Waste Loop — Zero-Waste City Practice Belt & Resource Circularity System (Concept)

Official scopes: coordinated research ~43.6 km² / overall design ~11.4 km² / key areas ~368.4 ha | boards from participant provisional model data (not official redlines)

ZERO • JZ • Concept Design Boards (A0 page 1)

Land-Use Structure (Concept Shares • Single Caliber)

临时概念边界 • 非官方红线 • 官方数据发布后复算
Provisional concept boundary • Not an official redline • Recalculate after official data

Three-Level Scope & Official Caliber
Coordinated research area ~43.6 km² (industry & future-city research); overall design area ~11.4 km² (one corridor, two belts, three nodes; this package's geometry is a concept sub-scope at this level, provisional polygon ~11.41 km²); key areas ~368.4 ha (three concept envelopes, not official redlines). Regional interface partners: Beiwai Community, Future Science City, Huairou Science City, Economic-Technological Development Area, Beijing–Tianjin–Hebei direction (concept protocols).

Three Project Families (Concept)
Treatment facilities (workshop/station/on-site food-waste points) • collection network (drop-offs/two-level routes/closed logistics/reversible in stallations) • governance mechanisms (EPR/points & deposits/preferential procurement/zero-waste convention).

Land Use — Single Caliber (Concept Shares)
Research ~30.4% • Park green ~27.1% • Business/Finance ~15.6% • Commercial ~13.4% • Residential ~11.1% • Cultural ~2.3%; caliber: geometry/land_use.geojson (EPSG:4548, class area ÷ provisional overall area). Not current or statutory land use; re-cut after official regulatory plan release.

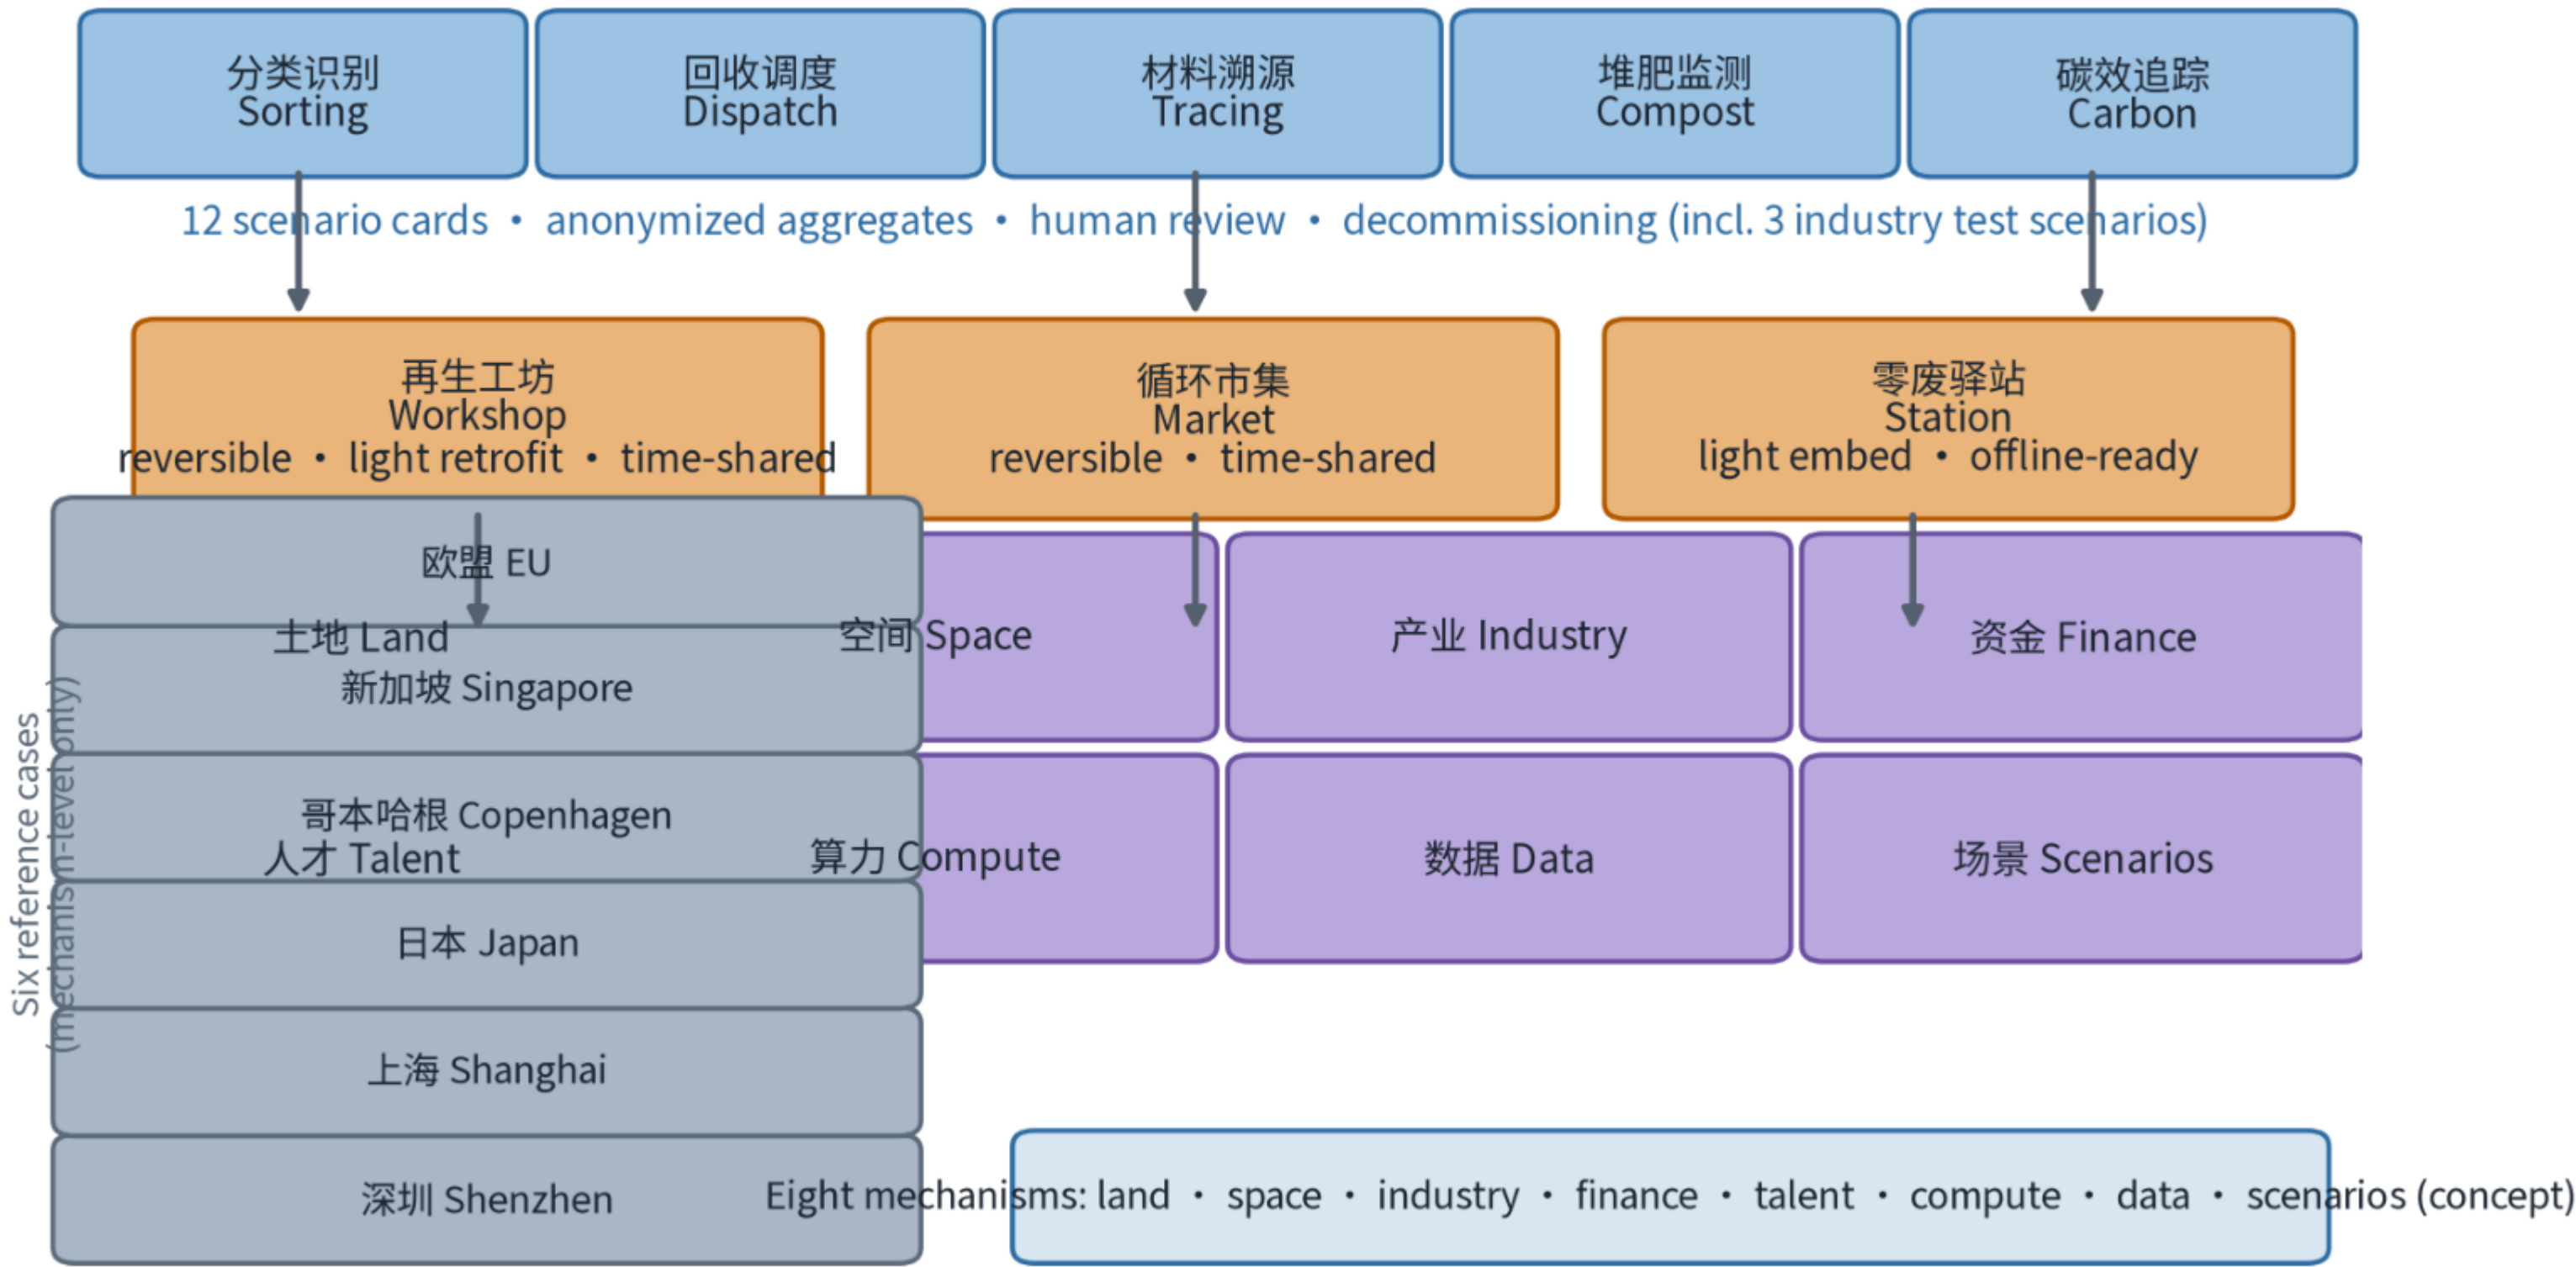

ZERO • JZ: Zero-Waste Loop — Zero-Waste City Practice Belt & Resource Circularity System (Concept)

临时概念边界 • 非官方红线 • 官方数据发布后复算 | Provisional concept boundary • not an official redline • recalculate after official data

Concept Design Boards (A0 page 2)

AI Ecosystem Atlas & Full-Stack Resource-Circularity System (Concept)

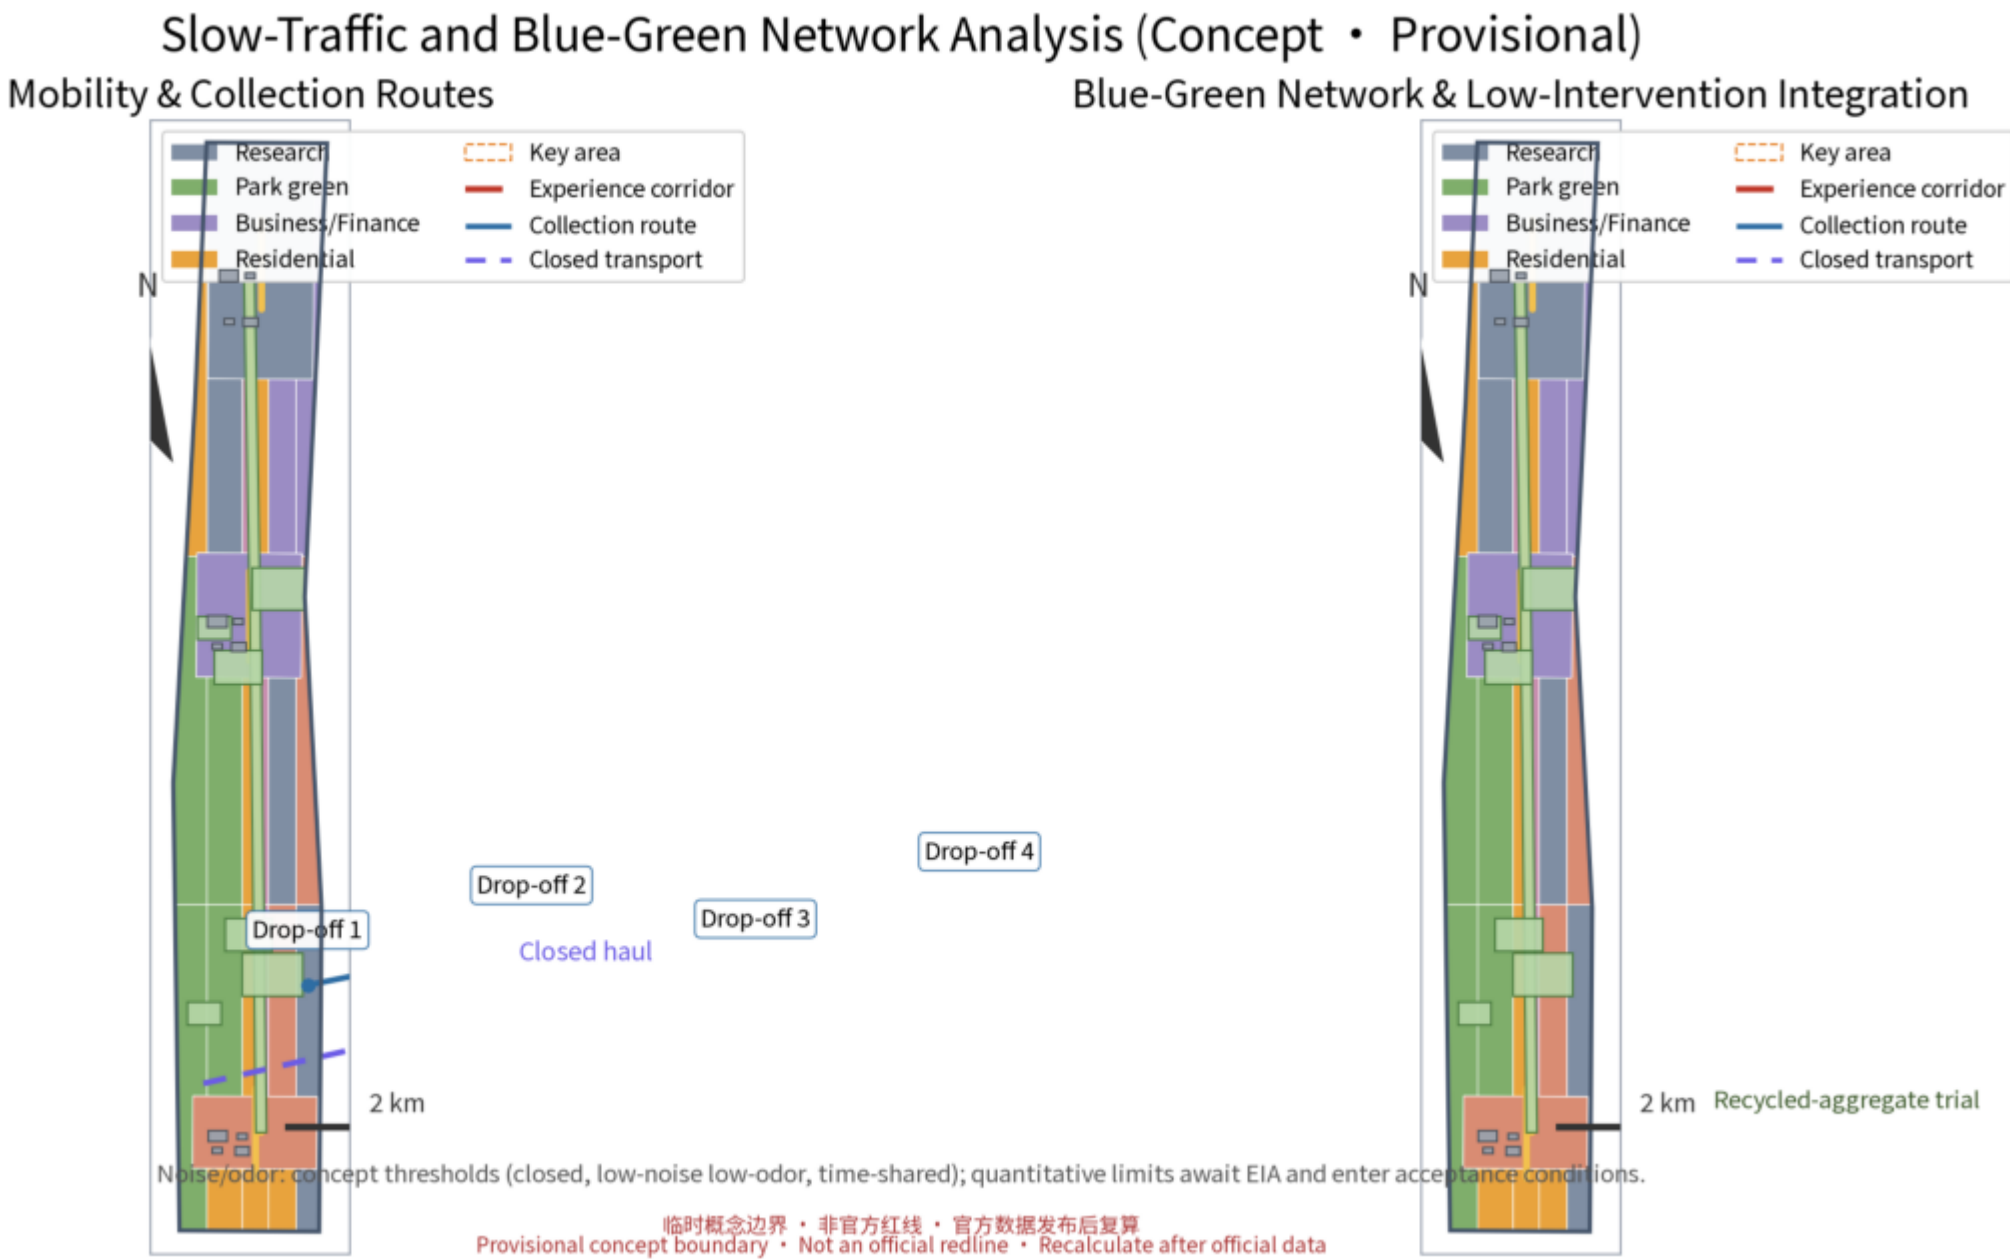

Waste flow → data flow → industry flow → spatial flow → public experience (concept directions)

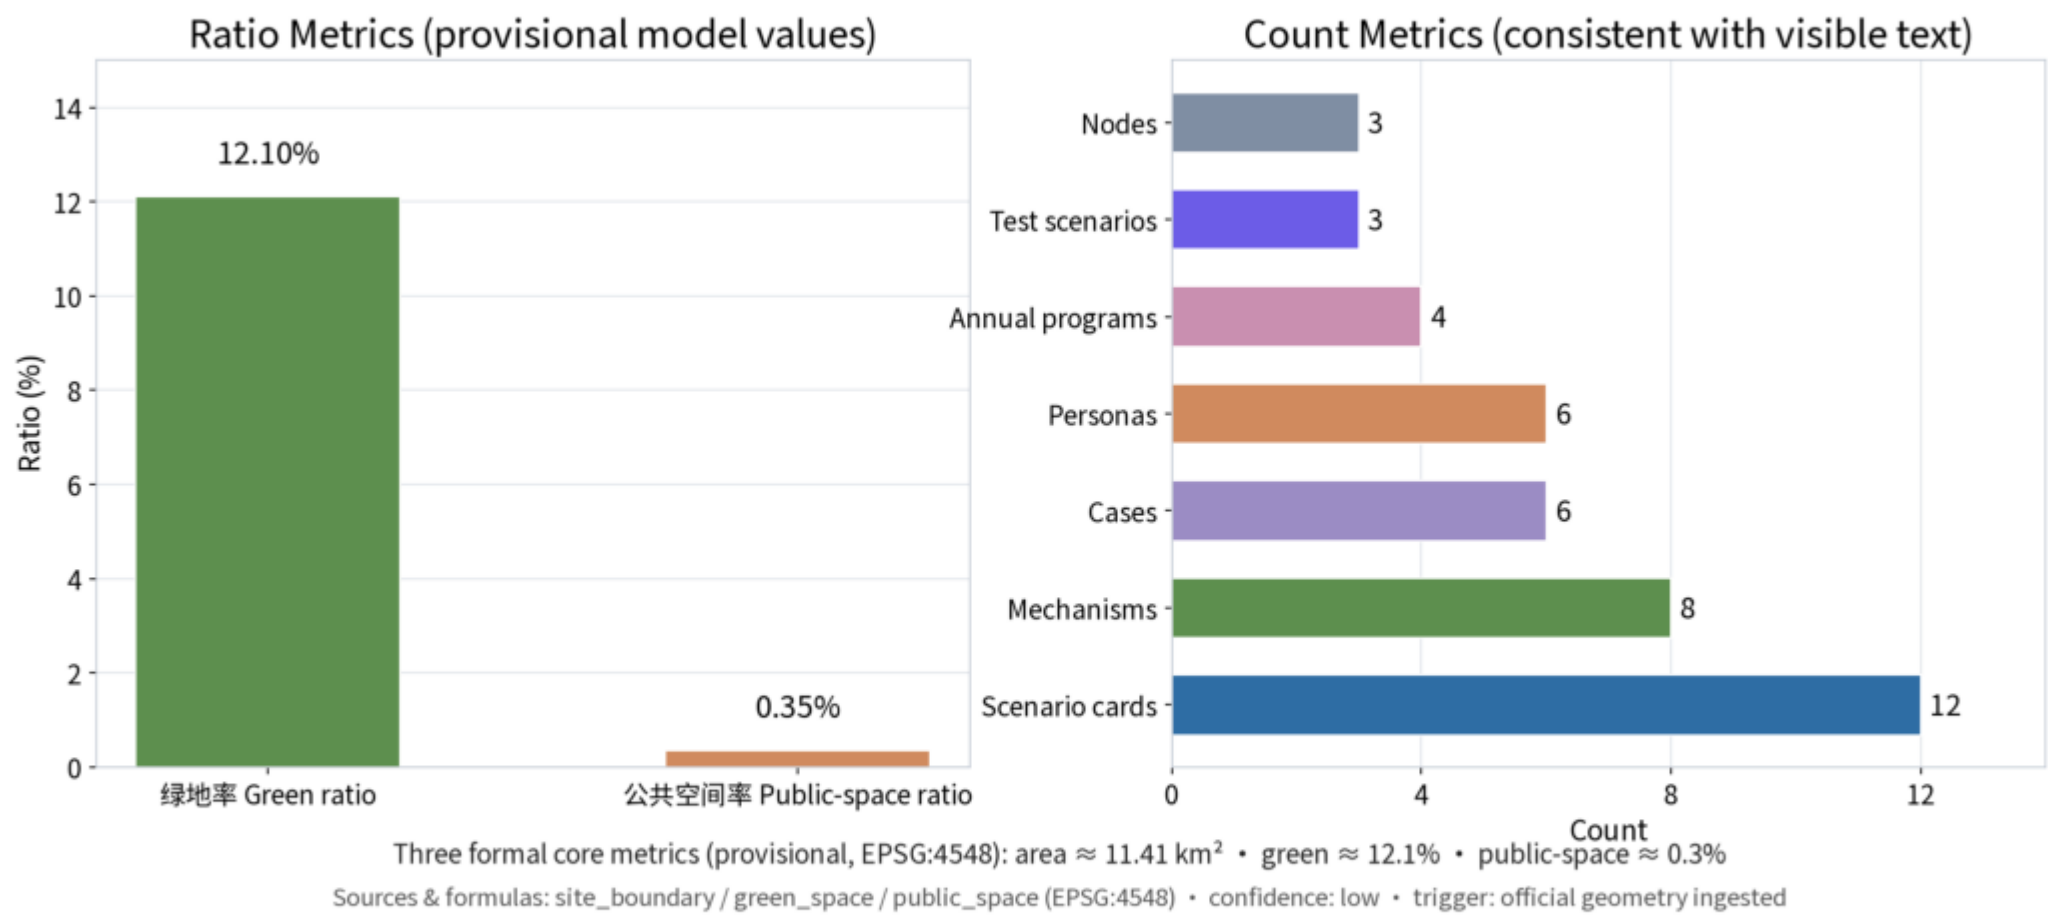

临时概念边界 • 非官方红线 • 官方数据发布后复算
Provisional concept boundary • Not an official redline • Recalculate after official data

Ecosystem Atlas & Scenario Placement
Five AI scenario families (sorting/dispatch/tracing/compost/carbon) expanded to 12 scenario cards, each bound to spatial placement, human-review points and decommissioning conditions; industry–space mapping is one-to-one across workshop, market and station.

Implementation & Operation (Concept)
RACI role matrix, siting thresholds, stage gates, professional verification checklists, public participation, NIMBY control, maintenance frequencies, decommissioning conditions and annual review metrics; costs as qualitative tiers only (low/medium/high); phased delivery (pilot → network closure → Beijing–Tianjin–Hebei synergy); developer community, scenario-opening flow, talent/enterprise conversion paths (concept).

Core Metric Evidence (ratio and count charts on separate axes)

临时概念边界 • 非官方红线 • 官方数据发布后复算
Provisional concept boundary • Not an official redline • Recalculate after official data

Core Metrics (Provisional)
Three formal core metrics: site_area_sqm ≈ 11,412,825 (~11.41 km²) • green_ratio ≈ 12.1% • public_space_ratio ≈ 0.3%; recomputed in EPSG:4548, low confidence, same-formula recalculation after official geometry is ingested.
