ROOTS

How the three engines land

FIG-01 | Roots, space and evidence chain

根系、空间与证据链

ROOTS → CHOICES → OBJECTS

- R-01 Self-reliant making

ORIGINATE → TEST → ADOPT
- R-02 Shared commons

park first / human path
- R-03 Reversible resilience

gate / fallback / restore
- R-04 Quiet intensity

90% quiet / 10% nodes

PACKAGE DERIVATION

- 01 Official / context sources

sources.json
- 02 Spatial objects

geometry/*.geojson
- 03 Evidence + gates

metrics.json / simulation.json
- 04 Records

rooted_design_matrix.json
- 05 Readable outputs

PWG / A3 / A0 / HTML

Sources: submitted GeoJSON / metrics.json / rooted_design_matrix.json; provisional boundary; scenarios defined_not_run.

ORIGINATE

Beijing AI Origin Community
research → commons → translation

TEST

Zhongzhiyuan AI Acceleration Area
contained, reversible, human takeover

ADOPT

Dazhongsi AI Industry Cluster

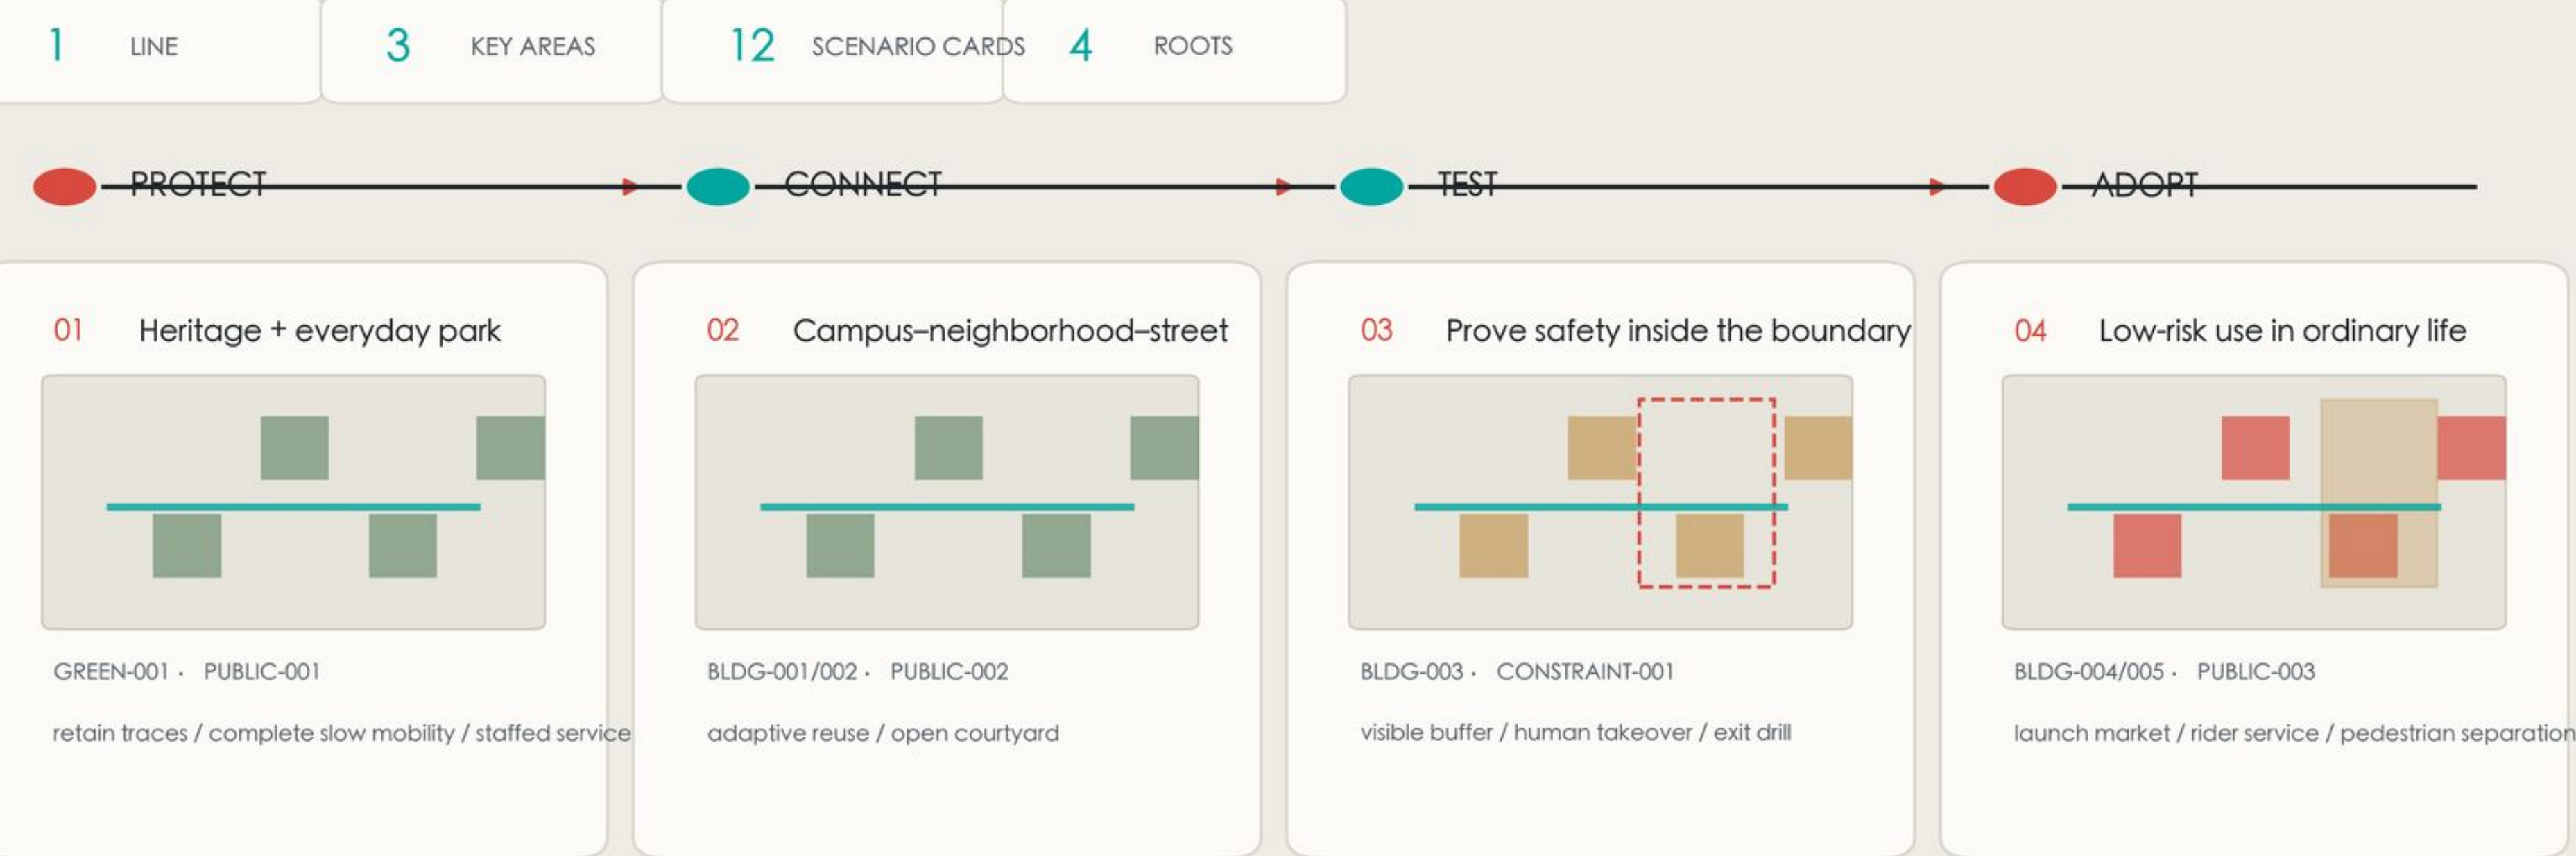

Four roots

self-reliant making · shared commons · reversible resilience · quiet intensity

Not slogans: each root becomes a concrete move—retain, adapt, test, and step back.

Build sequence: from one railway trace to an auditable public innovation line

Four steps make the future legible: protect first, connect next; test in a contained setting before entering everyday life.

Construction grammar

Every step has an evidence gate:

public baseline → ownership/fire checks → independent safety review → real-user observation → run receipt + sunset review

Concept atlas | visual references explain spatial moves; they are not official renderings, statutory boundaries, or construction drawings. Linked to geometry/*.geojson and simulation.json.

PROTECT: heritage + everyday park

retain traces, slow mobility, staffed service

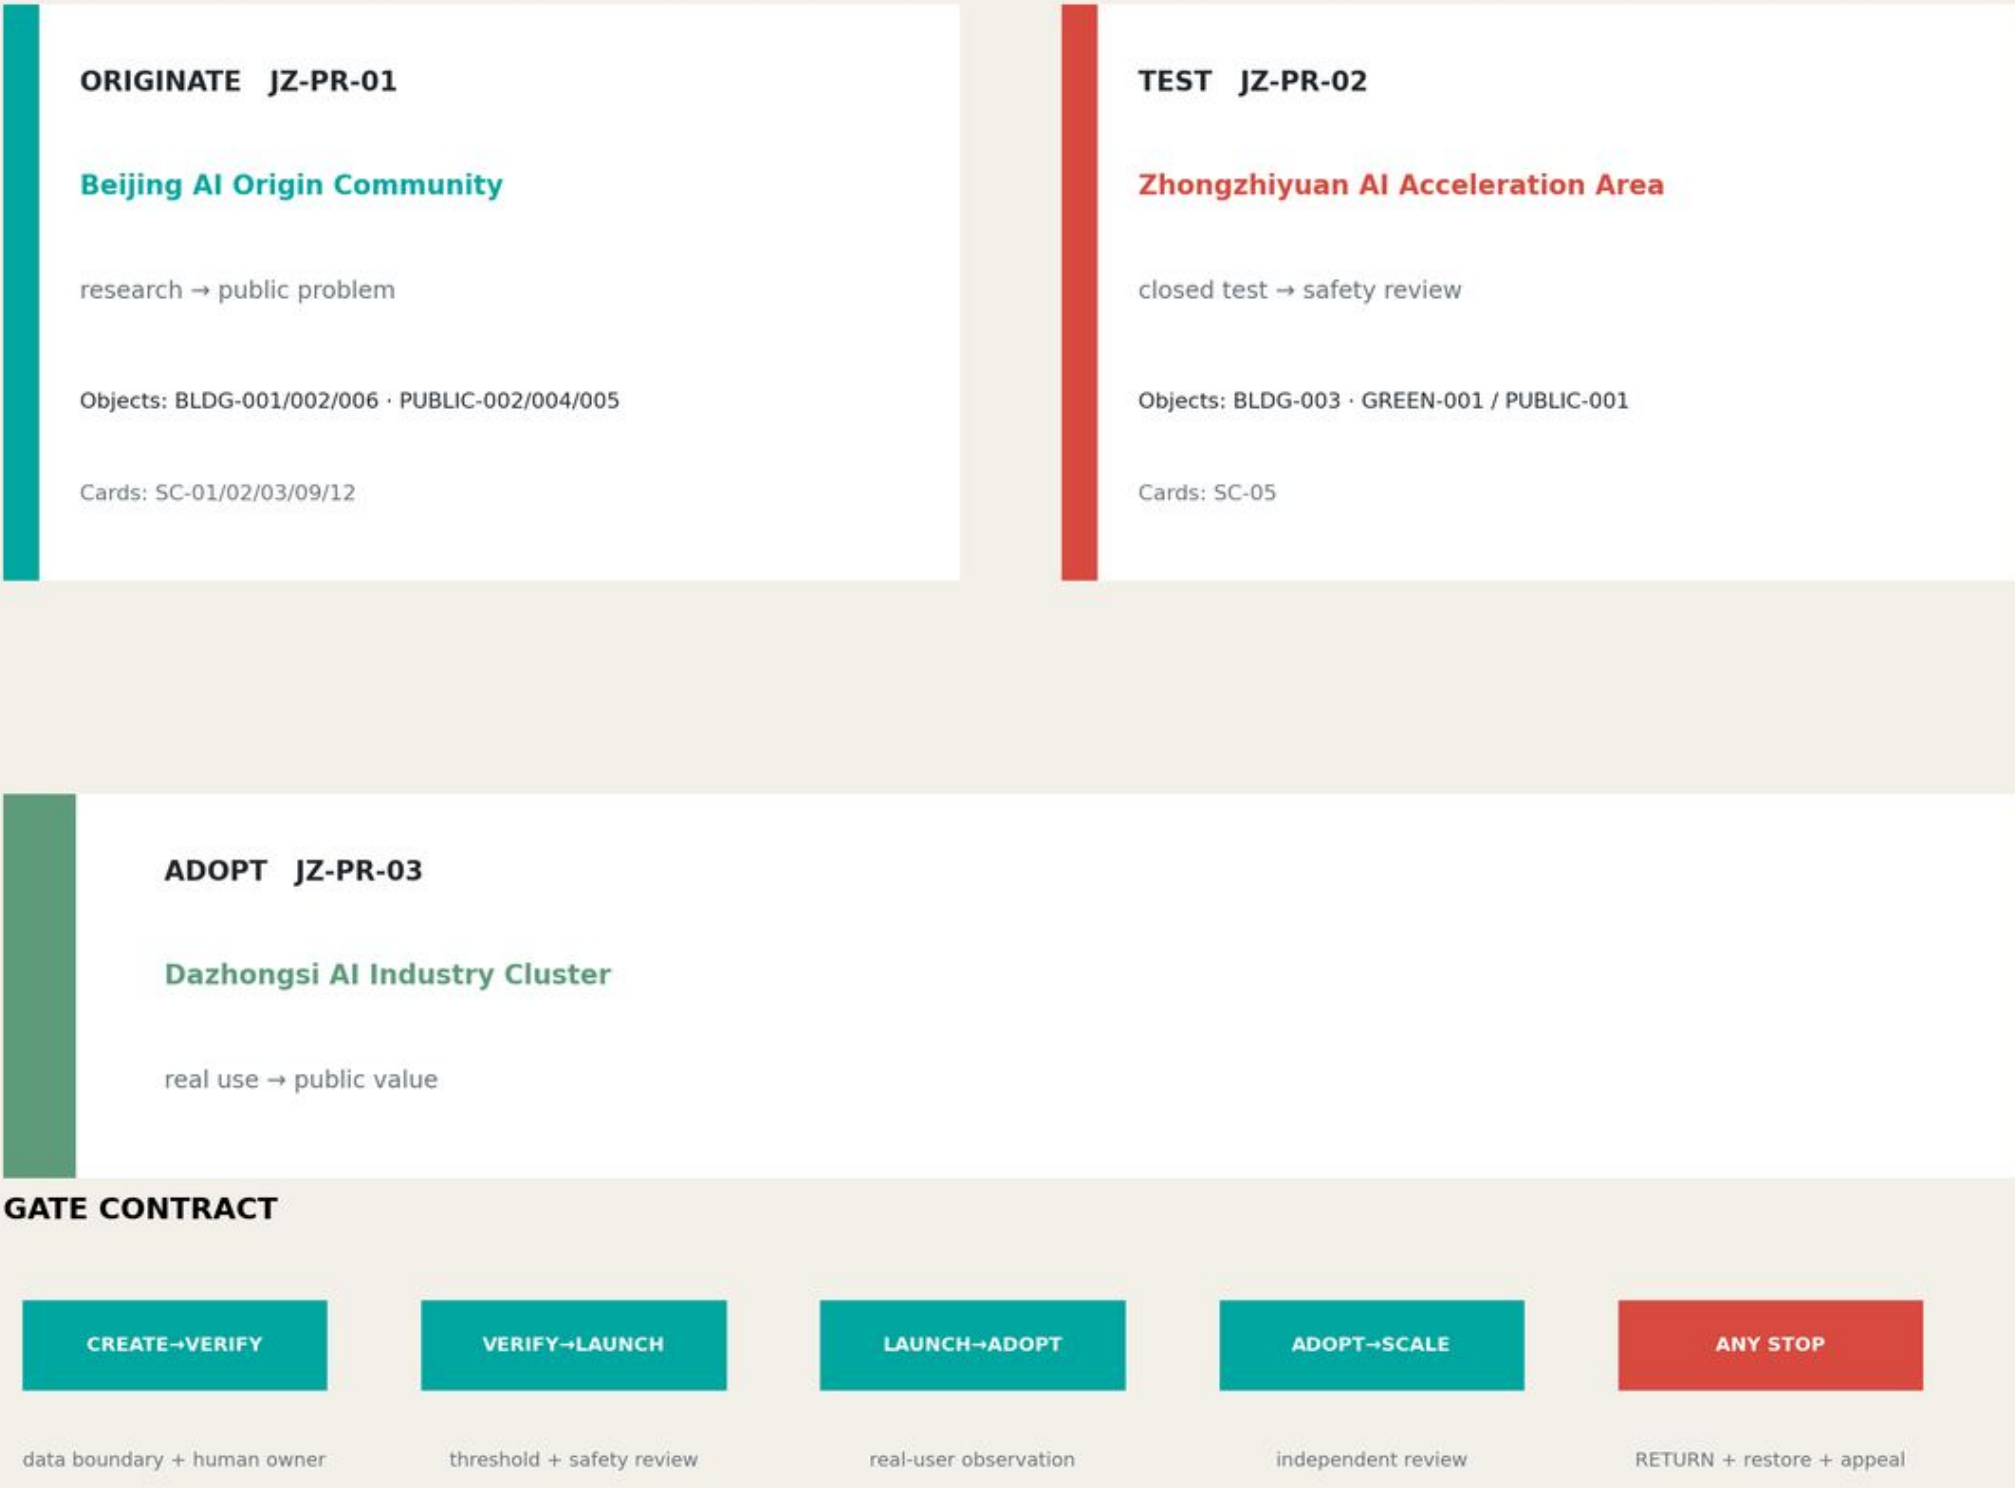

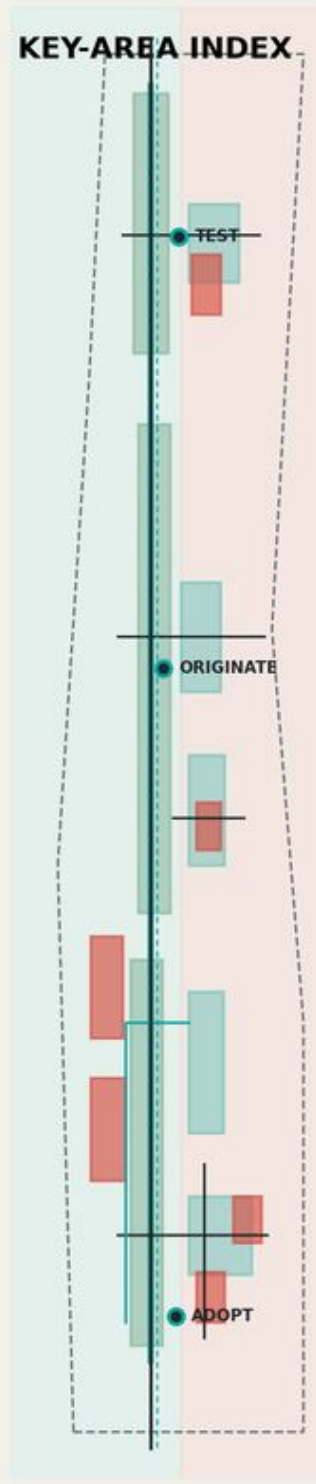

CONNECT: campus-neighborhood-street

adaptive reuse, open courtyard

FIG-03 | Three engines: Project Records and gates

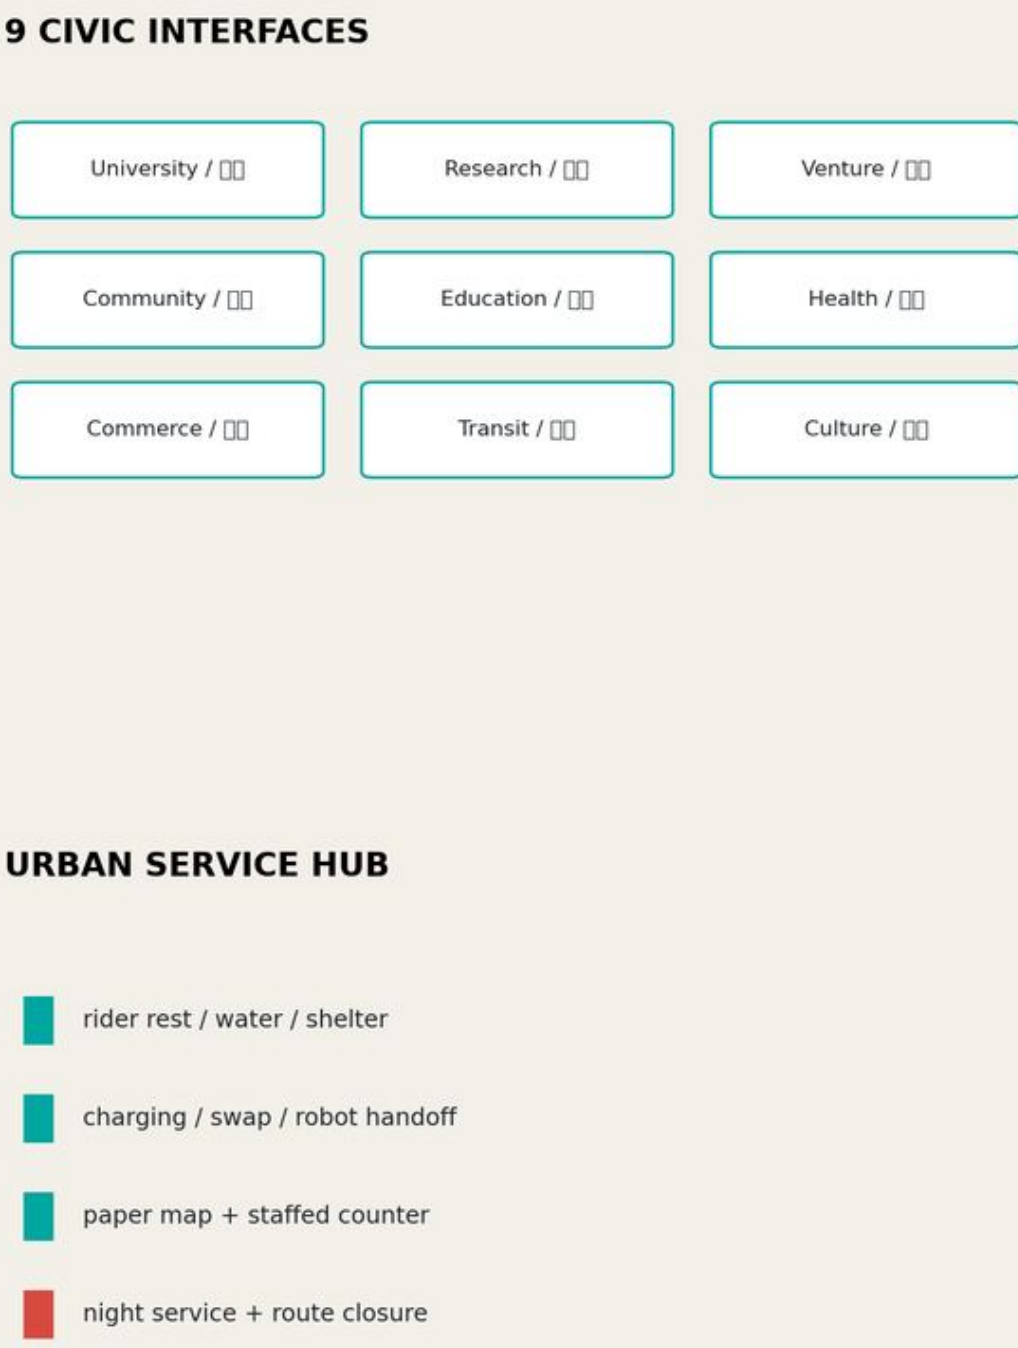

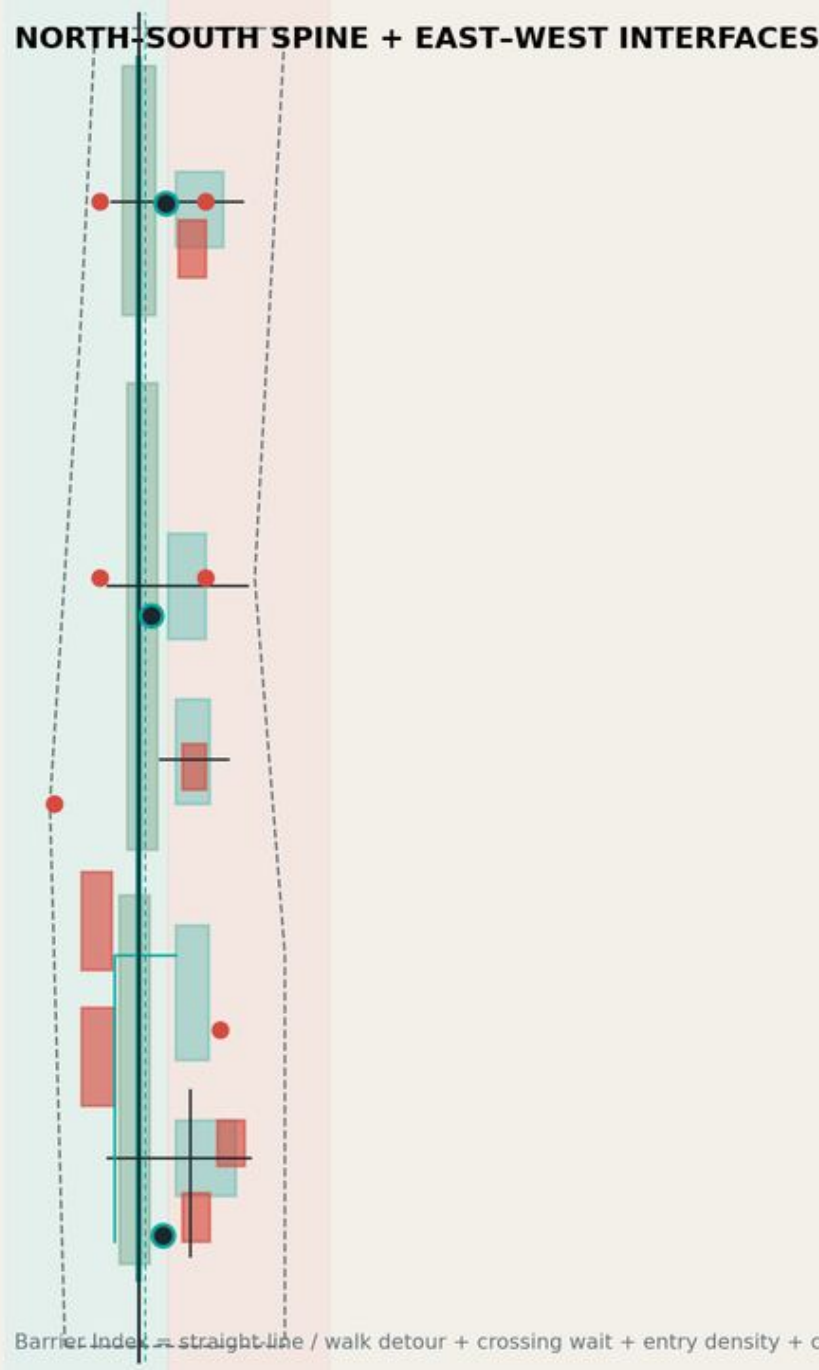

三引擎项目档案与阶段门

Sources: submitted GeoJSON / metrics.json / rooted_design_matrix.json; provisional boundary; scenarios defined_not_run.

FIG-04 | East-west stitching, blue-green network and services

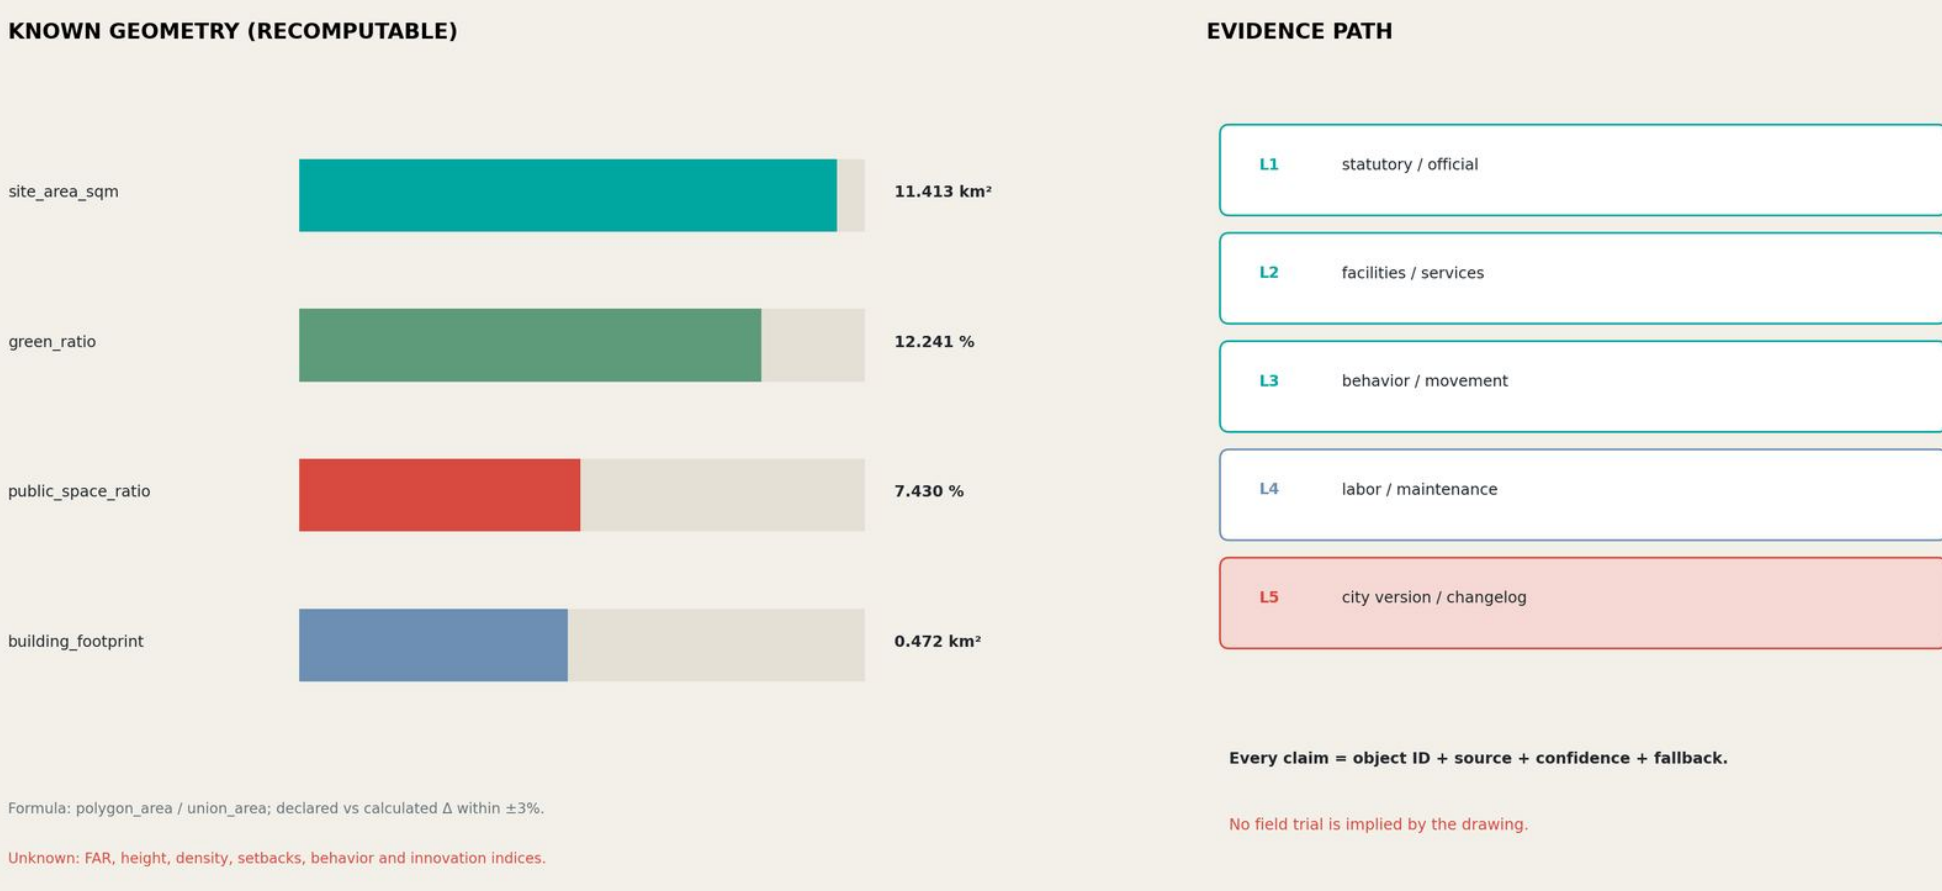

东西缝合、蓝绿复合与公共服务

Sources: submitted GeoJSON / metrics.json / rooted_design_matrix.json; provisional boundary; scenarios defined_not_run.

FIG-05 | Metric recomputation, confidence and evidence chain

指标复算、置信度与证据链

Sources: submitted GeoJSON / metrics.json / rooted_design_matrix.json; provisional boundary; scenarios defined_not_run.

Evidence gates

- public baseline
- ownership / fire checks
- independent safety review
- real-user observation
- run receipt + sunset review

No scale-up before the gate; failures return; every scenario keeps a human-equivalent path.

JZ OPENLINE / 07

CONCEPT / NTS

Three typical interfaces: what gets built

Not construction drawings: no invented site dimensions: object IDs, build actions and safety edges make the concept spatially explicit.

01

Quiet heritage park

Retain the trace first, then add everyday park use: digital service does not displace quiet commons.

GREEN-003 · ROAD-005 · PUBLIC-003

RETAIN · INSERT

02

Contained test interface

Public path and test movement never mix: transparent edge, human takeover and emergency stop arrive as one package.

BLDG-003 · PUBLIC-001 · CONSTRAINT-001/002

INSERT · STOP

03

Everyday adoption forecourt

Adapted hall, small service hub and separated routes are built together: staffed service remains when automation fails.

BLDG-004/005 · PUBLIC-003 · ROAD-004/007

ADAPT · INSERT

rail trace

slow path

rain garden

staffed help

public path

planted buffer

visible edge

test yard

walkable forecourt

rain garden

staffed service

separate delivery

Basis: geometry/"_geojson and simulation.json | Boundaries, ownership, fire access, utilities and exact widths require survey and statutory confirmation.

JZ OPENLINE / 08

TRIGGER-BASED

The future is a reversible build path, not a fixed end-state

Release resources by evidence: verify, launch lightly, test inside a boundary, then adopt in real life: no gate, no scale.

P0

no build

Verify base

official boundary / title

fire / utility / access

baseline + accountable lead

GO GATE

all dependencies confirmed

P1

light launch

Protect + connect

ROAD-001/005/006

GREEN-001/002/003

PUBLIC-002/003/004

GO GATE

access, safety and emergency drill pass

P2

controlled run

Contained test

BLDG-003 · PUBLIC-001

CONSTRAINT-001/002

JZ-PR-02 · SC-05

GO GATE

independent review + zero public intrusion

P3

90-day window

Adopt in real life

BLDG-004/005 · ROAD-007

JZ-PR-01 / JZ-PR-03

staffed desk + exit drill

GO GATE

meets human baseline + community review

P4

evidence decision

Scale or restore

past: release next segment

fast RETURN

publish gap + restoration log

GO GATE

quarterly review: no receipt, no renewal

What every step leaves behind

Project Record

objects · lead · risk

Scenario Card

baseline · threshold · human path

Run Receipt

result · energy · exception

City Changelog

release · return · restore

RETURN

safety degrades / complaints accumulate / audit incomplete / budget exceeded → stop → human takeover → publish gap → restore site or return one stage

Objects: PHASE-001-003, geometry/"_geojson, simulation.json | Stages express an evidence order, not a government delivery commitment.

Three conflict-prone interfaces

01

Quiet heritage park

GREEN-003 · ROAD-005 · PUBLIC-003

trace + slow path + rain garden + staffed service

02

Contained test edge

BLDG-003 · PUBLIC-001 · CONSTRAINT-001/002

public path | planted buffer | visible edge | stop

03

Everyday adoption forecourt

BLDG-004/005 · PUBLIC-003 · ROAD-004/007

walkable forecourt + staffed service + delivery split

Five-stage build path

P0

verify base

boundary / title / fire / utility

P1

protect + connect

access / safety / emergency drill

P2

contained test

independent review + zero intrusion

P3

real-life adoption

human baseline + community review

P4

scale or restore

no receipt, no renewal

RETURN

safety drops / complaints accumulate / audit incomplete / budget overrun → stop → human takeover → publish gap → restore
