

JZ OPENLINE

Jing-Zhang Co-Intelligence Line

A Global Corridor for AI-to-City Conversion & Validation

1 LINE + 3 ENGINES (Originate/Test/Adopt) + 2 WINGS + 9 INTERFACES + N STATIONS + 1 LOOP

Governance: NO EXIT, NO ENTRY — no scenario enters the city without an exit mechanism.

Study scope 43.6 km² (+0.02%)

AI industry ecology, zones & wings, future urban form, cultural narrative

Design scope 11.4 km² (+0.11%)

Regulatory-depth urban design: renewal list, blue-green, mobility

Key areas 368.4 ha (+0.24%)

Zhongzhiyuan TEST / Origin Community ORIGINATE / Dazhongsi ADOPT

2 WINGS

West = capital & knowledge services; East = urban life & consumption

1 LOOP

CREATE→VERIFY→LAUNCH→ADOPT→SCALE→RETURN; SCALE reaches the next city

03

12 AI Scenario Cards: Thresholds & No-AI Equivalents

Seven-field discipline: task/metric/baseline/threshold/fallback/data-scope/human-equivalent. Thresholds illustrative until L3 data; residents refusing smart services keep full service level.

#	Scenario	Pass threshold (illustrative)	No-AI equivalent path
01	Campus Without Walls	Task success ≥ human info-desk baseline (e.g. ≥90%)	Paper timetable + help desk + human tour
02	Research-to-Founder Clinic	Adoption ≥ human tech-transfer clinic (illustrative)	Human tech-transfer office
03	AI Community Health Navigator	Correct-department arrival ≥ human guide (e.g. ≥95%)	Hospital human guide desk
04	Assistive Robot Walk	Zero harm; independent walk completion at baseline	Human companion walk + accessible facilities
05	Physical AI Test Yard	Tasks pass safety review, zero public-realm intrusion	Closed-site manual test process
06	Agent Retail Street	Transaction success ≥ human counter; complaints not up	Human cashier & staff service
07	Future Product Launch Market	≥1 real user full-chain with verifiable feedback in 90 days	Conventional launch & trial
08	Rider Friendly Hub (URBAN SERVICE HUB)	Wait/wayfinding time ≤ current baseline (zero increase)	Staffed service point + paper building map
09	Global Talent Concierge	Multilingual task success ≥ bilingual human desk	Human inquiry & bilingual signage
10	Quiet AI Park	Maintenance response ≤ human patrol baseline	Human patrol & on-site signage
11	HUMAN+ROBOT Logistics	100% human takeover on exception; speed ≥ rider-only	Rider-only delivery
12	City Observatory	Public readings match raw records, third-party recomputable	Paper notice board & periodic bulletin

NO ENTRY double gate

Qualification gate: scenarios must pass TEST-ground validation;

Registry gate: exit plan, restoration standard & named owner pre-registered in the retirement registry — no entry otherwise.

NO EXIT execution

Public exit audit: triple receipt of data deletion, site restoration, appeal handling;

Receipts permanently logged in CITY CHANGELOG; a full exit drill in the first-opening area before launch, runbook published with the an

Six-ring migration gates

CREATE→VERIFY register data boundary & human owner; VERIFY→LAUNCH meet thresholds;

LAUNCH→ADOPT complete real-user observation; ADOPT→SCALE independent review; stop condition → RETURN.

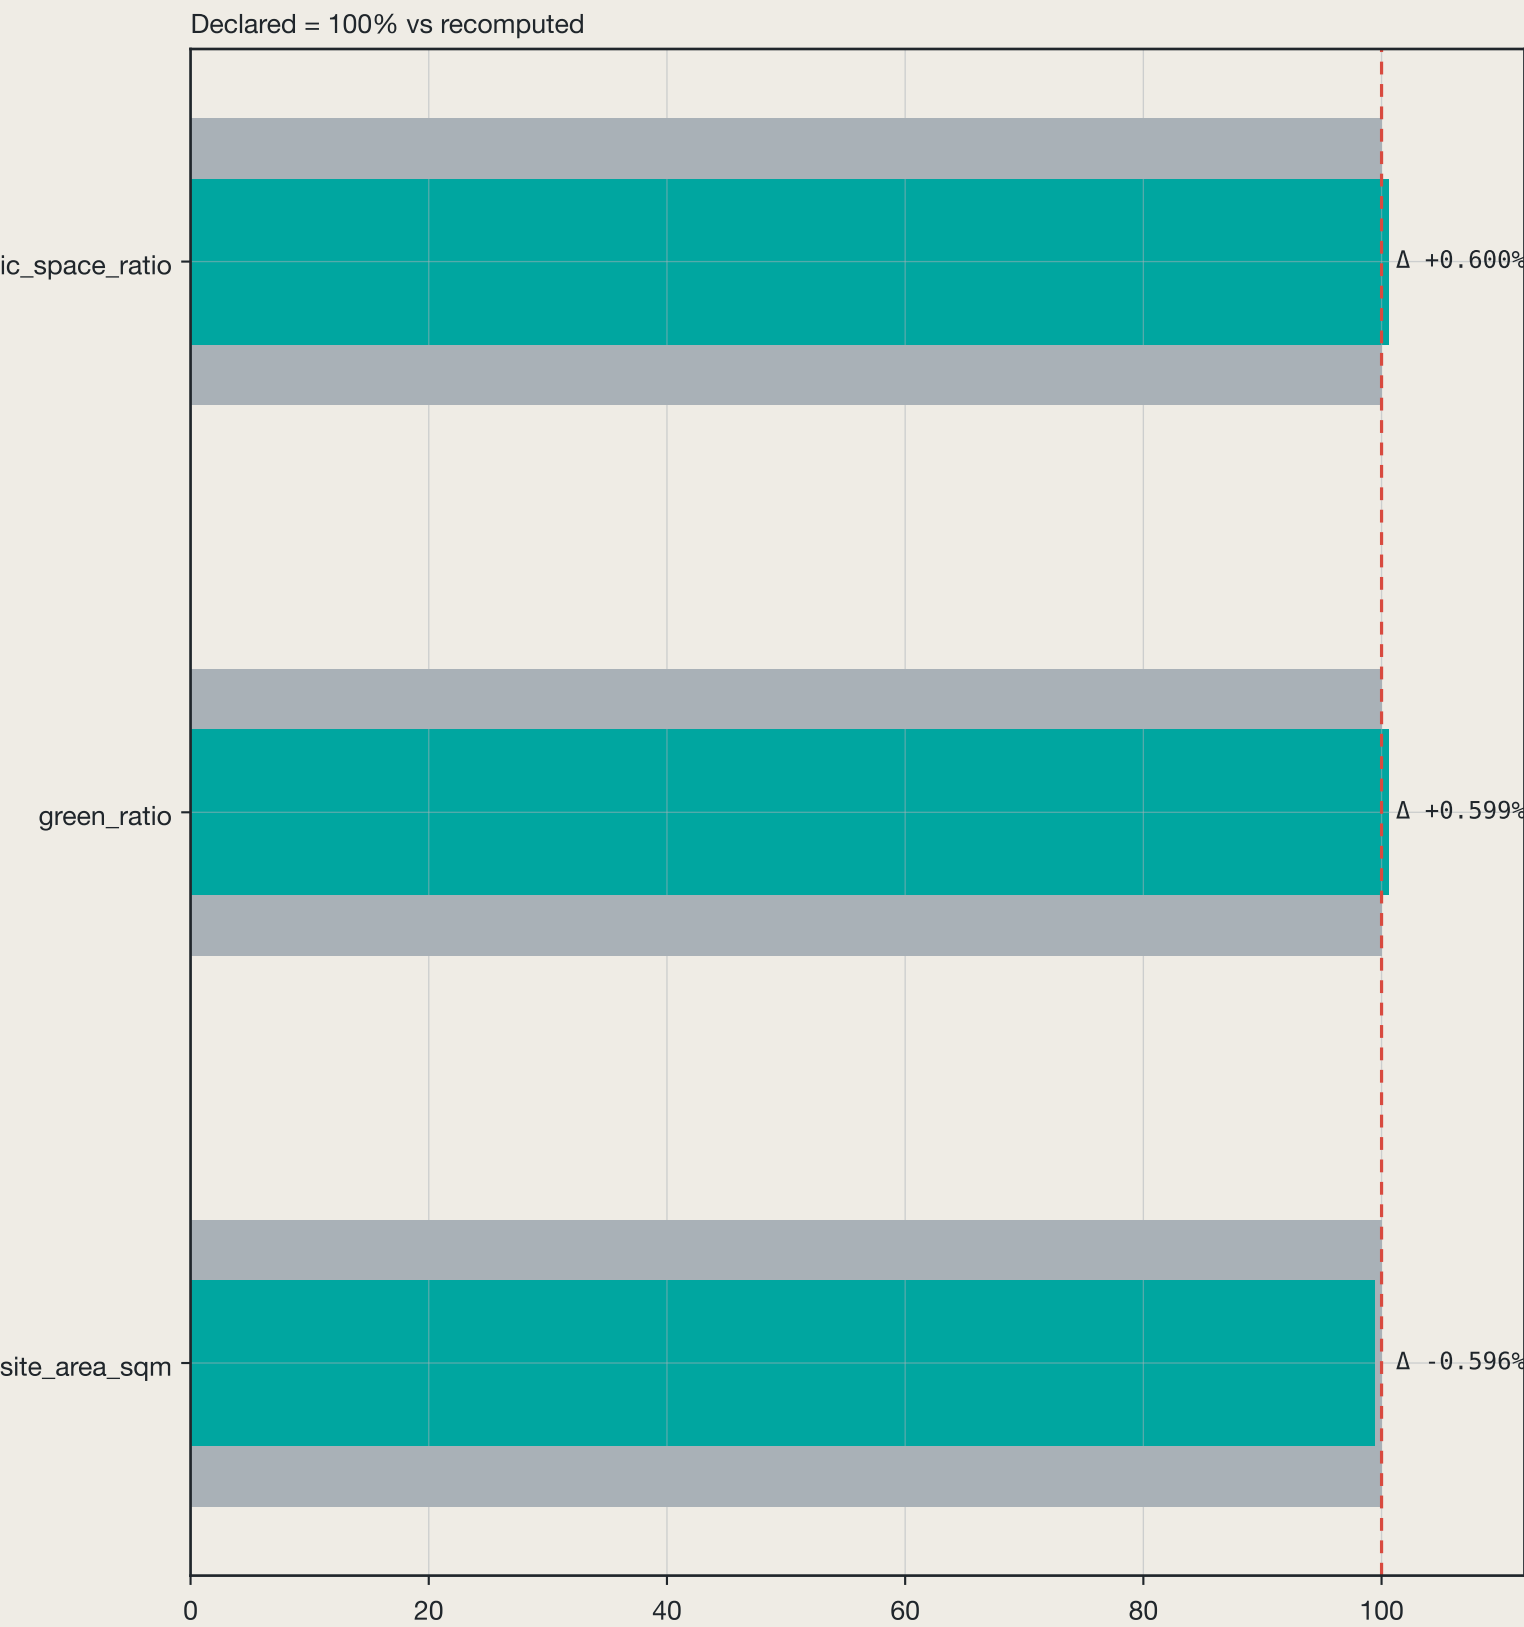

CITY CHANGELOG release semantics

Version + diff + rollback + deprecation + known issues + unmerged-futures archive (rejected proposals archived with reasons);

Sunset clause: scenarios without renewed evidence enter retirement. City versioning ≠ benchmark ≠ leaderboard.

Open public product

JZ OPENLINE ADMISSION — open benchmark for urban AI admission (concept v0.1): five pieces — admission gate, scenario card, run receipt, exit audit, annual version — reusable by the next city.

Cost discipline

Sensitivity ranges + null discipline: no fake precision; UNKNOWN metrics state gap, suggested scope, trigger

URBAN SERVICE HUB staffing

~6 staff per station per shift (concept magnitude, calibrated by exit drill)

Five funding channels (scenarios, not commitments)

Special bonds / REITs / corporate adoption / operating income / public-service purchase — each with premise, approval, failure & fallback

Resource release bound to evidence gates

25/25/25/25 released on CREATE-VERIFY-LAUNCH-ADOPT gates; no gate, no release

Phasing PHASE-001

Phase-1 discussion scope 4,587,014 sqm (within provisional boundary); resource release bound to evidence gates

Proactive disclosure of community review

Issue #846: provisional boundary disjoint from heritage park (nearest 412.5m); Issue #1029: Dazhongsi centroid off by 2.26km — relative logic holds, absolute siting awaits official boundary; thanks to community public evidence

Full recompute gate

Official boundary triggers breaking change: layers → metrics → HTML → manifest hashes

Namesake disambiguation

Two OPENLINEs in this call: community→city (open-source organising the city) vs AI→city (ours — AI earning entry to the real city); no naming priority claimed, differentiated by mechanism semantics

Explicit non-goals

No new gate/ticket/token mechanisms; no signal-tricolour visuals; no fake numbers for UNKNOWN; no priority claims
