FIG-01 | Roots, space and evidence chain

根系、空间与证据链

ROOTS → CHOICES → OBJECTS

- R-01 Self-reliant making**
ORIGINATE → TEST → ADOPT
- R-02 Shared commons**
park first / human path
- R-03 Reversible resilience**
gate / fallback / restore
- R-04 Quiet intensity**
90% quiet / 10% nodes

PACKAGE DERIVATION

- 01 Official / context sources**
sources.json
- 02 Spatial objects**
geometry/*.geojson
- 03 Evidence + gates**
metrics.json / simulation.json
- 04 Records**
rooted_design_matrix.json
- 05 Readable outputs**
PNG / A3 / A0 / HTML

Sources: submitted GeoJSON / metrics.json / rooted_design_matrix.json; provisional boundary; scenarios defined_not_run.

In one sentence

Connect railway heritage, Haidian research translation and everyday city life into one verifiable public innovation line.

The spine stays: 1 LINE + 2 WINGS; three engines handle originate, test and adopt.

FIG-02 | Three levels and spatial structure

三层范围与空间结构

COORDINATE / OVERALL / KEY AREAS

SPATIAL FORMULA

- 1 LINE** rail / green / innovation / open
- 3 ENGINES** ORIGINATE / TEST / ADOPT
- 2 WINGS** knowledge ↔ city life
- 9 INTERFACES** east-west stitching
- 1 LOOP** CREATE → ... → RETURN

GEOMETRIC CHECK

PROVISIONAL geometry; recompute on official polygons

Sources: submitted GeoJSON / metrics.json / rooted_design_matrix.json; provisional boundary; scenarios defined_not_run.

The heritage public space is the base. Research, industry services and everyday support layer along it, organized by the slow line and three key areas—not as a flat land-use dump.

The provisional boundary is intake geometry only; recompute the whole package when official geometry is released.

ORIGINATE

JZ-PR-01

Beijing AI Origin Community

research → public problem

Objects: BLDG-001/002/006 · PUBLIC-002/004/005

Cards: SC-01/02/03/09/12

TEST

JZ-PR-02

Zhongzhiyuan AI Acceleration Area

closed test → safety review

Objects: BLDG-003 · GREEN-001 / PUBLIC-001

Cards: SC-05

ADOPT

JZ-PR-03

Dazhongsi AI Industry Cluster

real use → public value

GATE CONTRACT

CREATE→VERIFY

data boundary + human owner

VERIFY→LAUNCH

threshold + safety review

LAUNCH→ADOPT

real-user observation

ADOPT→SCALE

independent review

ANY STOP

RETURN + restore + appeal

Sources: submitted GeoJSON / metrics.json / rooted_design_matrix.json; provisional boundary; scenarios defined_not_run.

ORIGINATE

Beijing AI Origin Community

TEST

Zhongzhiyuan AI Acceleration Area

ADOPT

Dazhongsi AI Industry Cluster

How do results leave campus?

How can technology be tested safely?

Will people actually use it?

NORTH-SOUTH SPINE + EAST-WEST INTERFACES

9 CIVIC INTERFACES

University / 大学	Research / 研究	Venture / 创投
Community / 社区	Education / 教育	Health / 健康
Commerce / 商业	Transit / 交通	Culture / 文化

URBAN SERVICE HUB

- rider rest / water / shelter
- charging / swap / robot handoff
- paper map + staffed counter
- night service + route closure

Sources: submitted GeoJSON / metrics.json / rooted_design_matrix.json; provisional boundary; scenarios defined_not_run.

The slow line links campus, neighborhood, park and market as one life chain; the Qinghe ecology segment, rain gardens, accessible paths and rider services are one infrastructure set.

90% quiet public life, 10% high-intensity nodes; no LED strip and no smart layer replacing people.

Build sequence: from one railway trace to an auditable public innovation line

Four steps make the future legible: protect first, connect next; test in a contained setting before entering everyday life.

Construction grammar

Every step has an evidence gate:
public baseline → ownership/fire checks → independent safety review → real-user observation → run receipt + sunset review

Concept atlas | visual references explain spatial moves; they are not official renderings, statutory boundaries, or construction drawings. Linked to geometry/*.geojson and simulation.json.

PROTECT → CONNECT → TEST → ADOPT. Every step has a baseline, owner, threshold, rollback and sunset review.

The diagram turns the future plan from an effect into a sequence.

Make public life and adaptive reuse tangible first

retain railway traces, complete slow mobility and staffed service

conceptual rendering · not official image

adaptive reuse and open courtyard for research translation

conceptual rendering · not official image

Test yard and Dazhongsi adoption

07

Prove inside the boundary before entering ordinary life

transparent safety boundary, manual control and reversible test

conceptual rendering · not official image

everyday launch market, rider service and separated lanes

conceptual rendering · not official image

JZ OPENLINE / 07

CONCEPT / NTS

Three typical interfaces: what gets built

Not construction drawings: no invented site dimensions; object IDs, build actions and safety edges make the concept spatially explicit.

01

Quiet heritage park

Retain the trace first, then add everyday park use; digital service does not displace quiet commons.

GREEN-003 · ROAD-005 · PUBLIC-003

RETAIN INSERT

02

Contained test interface

Public path and test movement never mix; transparent edge, human takeover and emergency stop arrive as one package.

BLDG-003 · PUBLIC-001 · CONSTRAINT-001/002

INSERT STOP

03

Everyday adoption forecourt

Adapted hall, small service hub and separated routes are built together; staffed service remains when automation fails.

BLDG-004/005 · PUBLIC-003 · ROAD-004/007

ADAPT INSERT

Basis: geometry/*.geojson and simulation.json | Boundaries, ownership, fire access, utilities and exact widths require survey and statutory confirmation.

Retain, adapt, insert and stop are no longer text categories; they are placed into the heritage park, test edge and adoption forecourt.

Ownership, fire access, utilities and survey set dimensions next.

Release resources by evidence; stage names are not delivery commitments

FIG-05 | Metric recomputation, confidence and evidence chain

指标复算、置信度与证据链

Gates: public baseline → ownership/fire checks → independent safety review → real-user observation → run receipt and sunset review.

The three Project Records remain conceptual and the 12 scenario cards are not field-run; provisional boundary and key-area geometry will be recomputed when official data arrives.
