

ZERO • JZ: Circular Zero-Waste Belt (Concept • A0 Board 1/2)

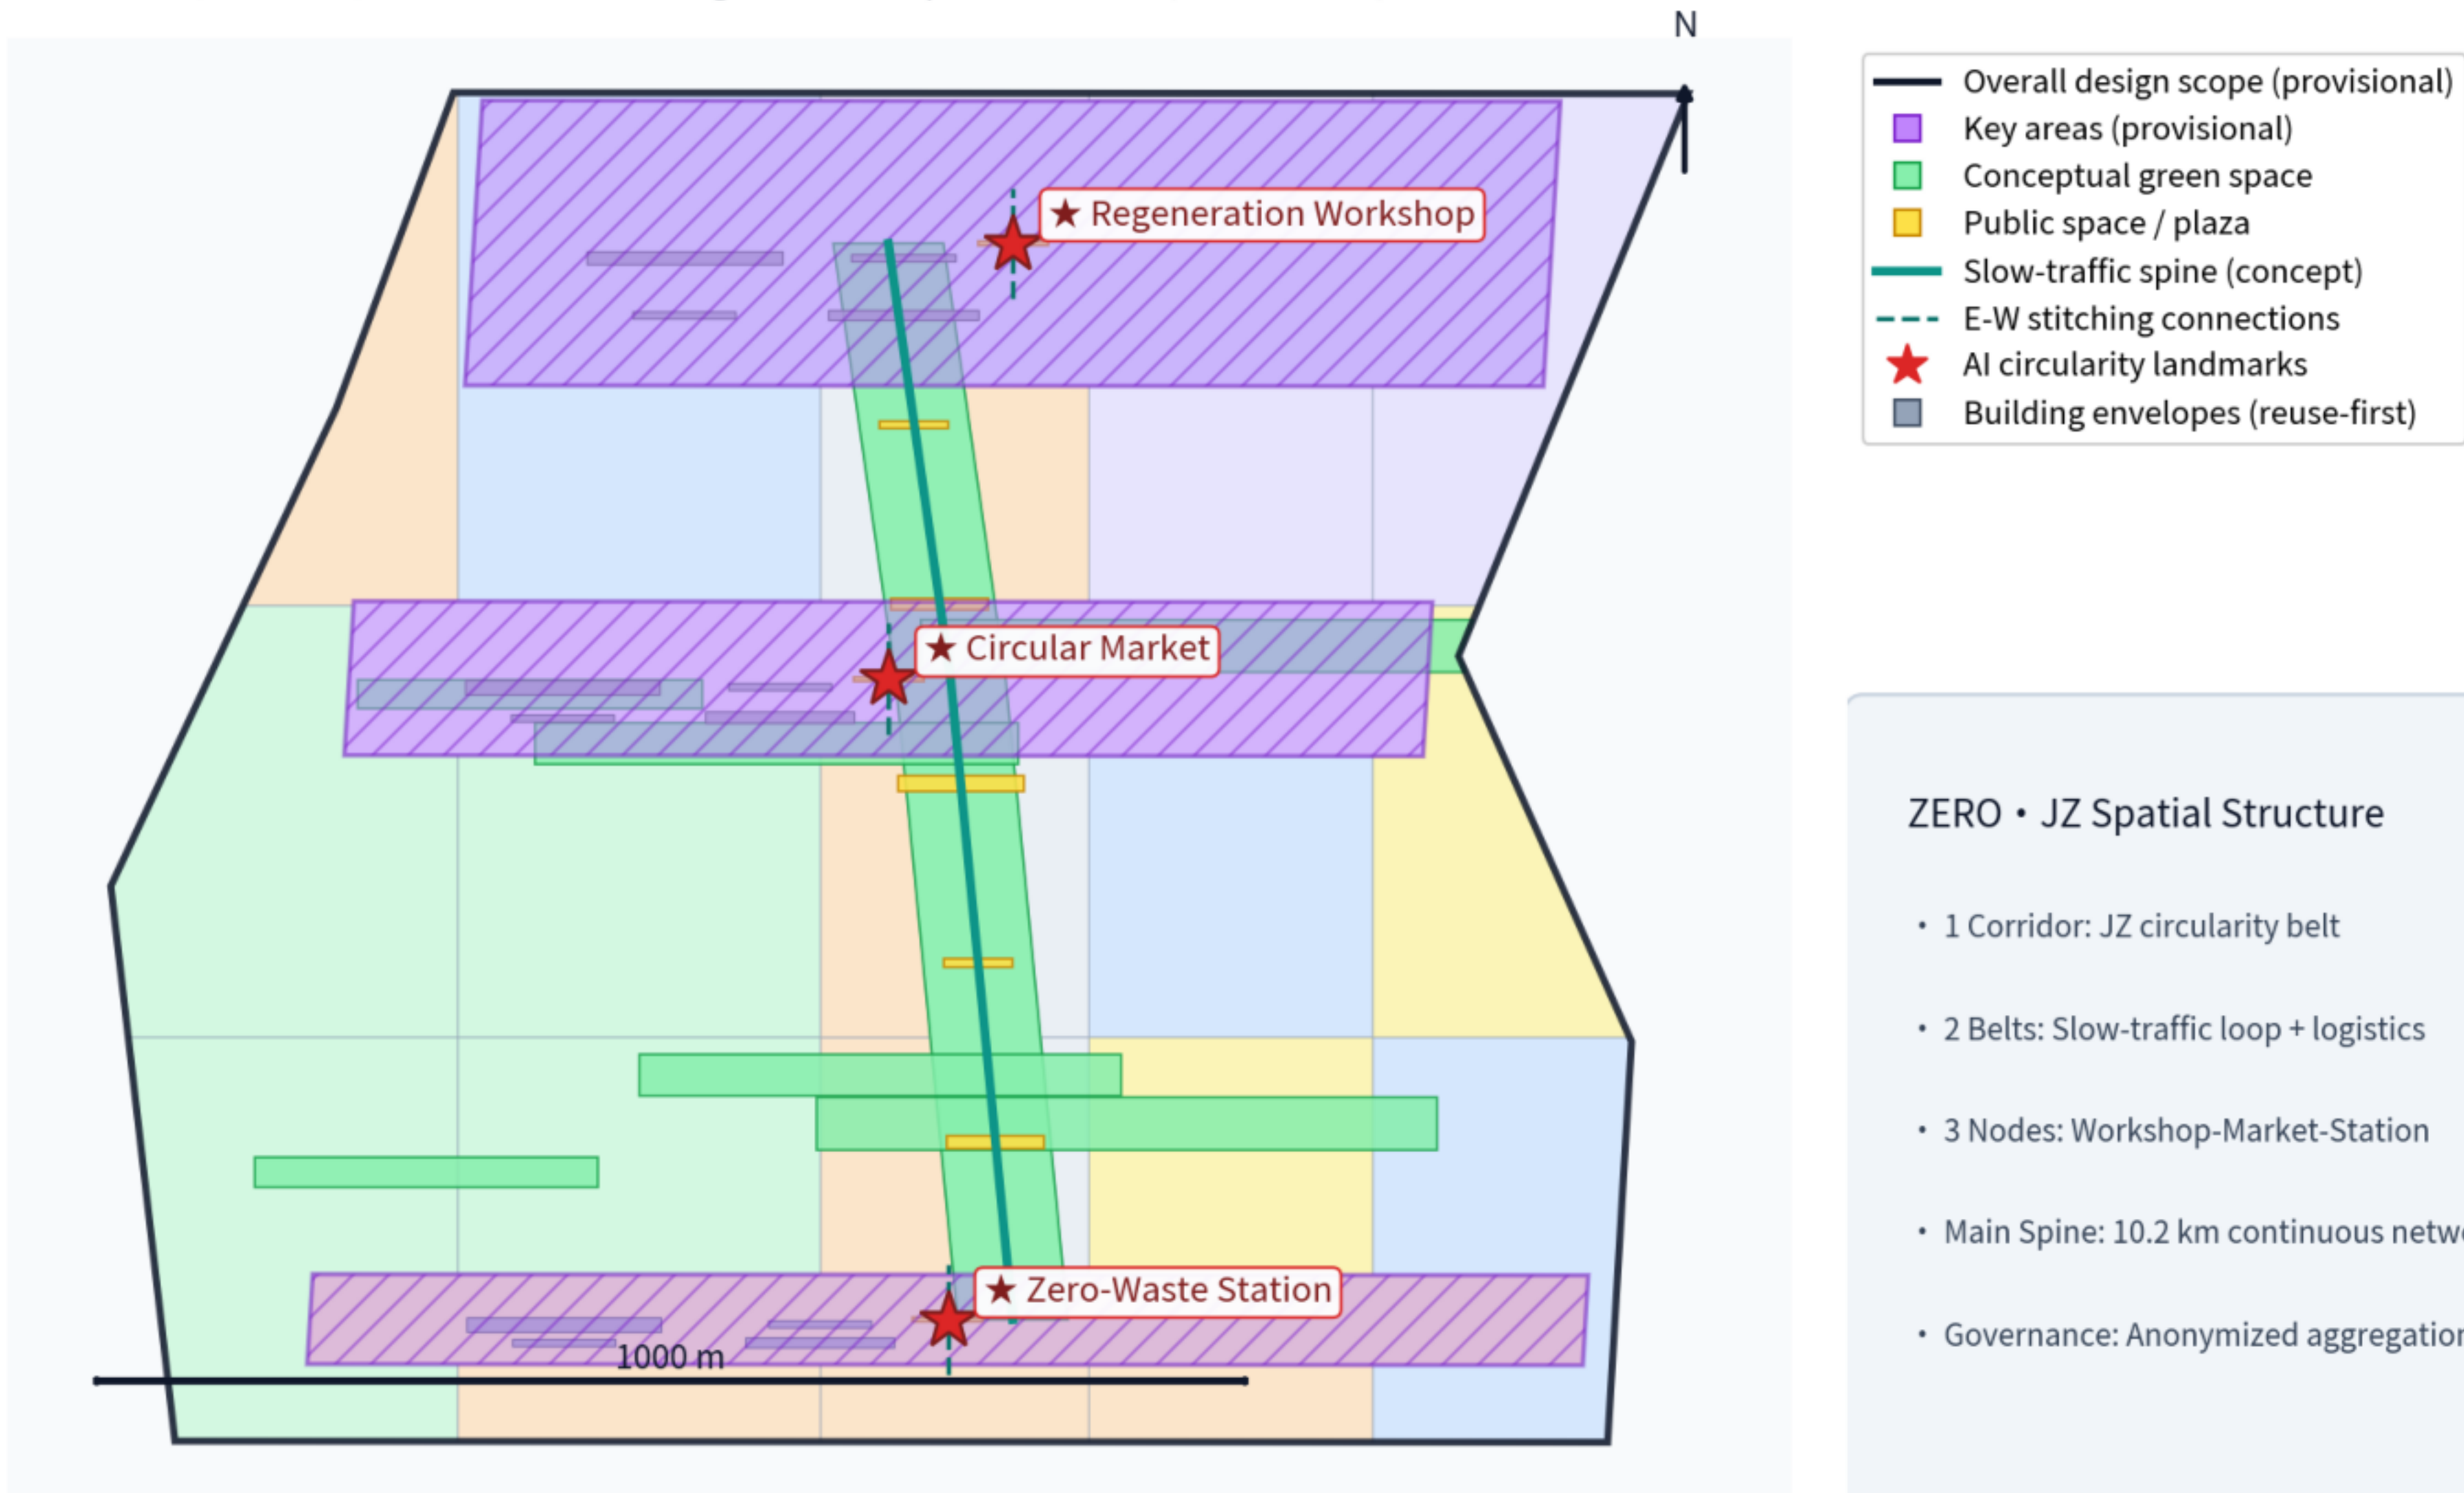

One Corridor, Two Belts, Three Nodes • Waste streams translated to data/industry/spatial flows • Scopes per official text

PROVISIONAL boundary • not an official redline • recalculate after official data

Overall Design Overview: Circular Zero-Waste Belt

One Corridor, Two Belts, Three Nodes • Covering $\approx 11.41\text{ km}^2$ provisional area (PROVISIONAL)

PROVISIONAL boundary • not an official redline • recalculate after official data

ZERO • JZ Spatial Structure

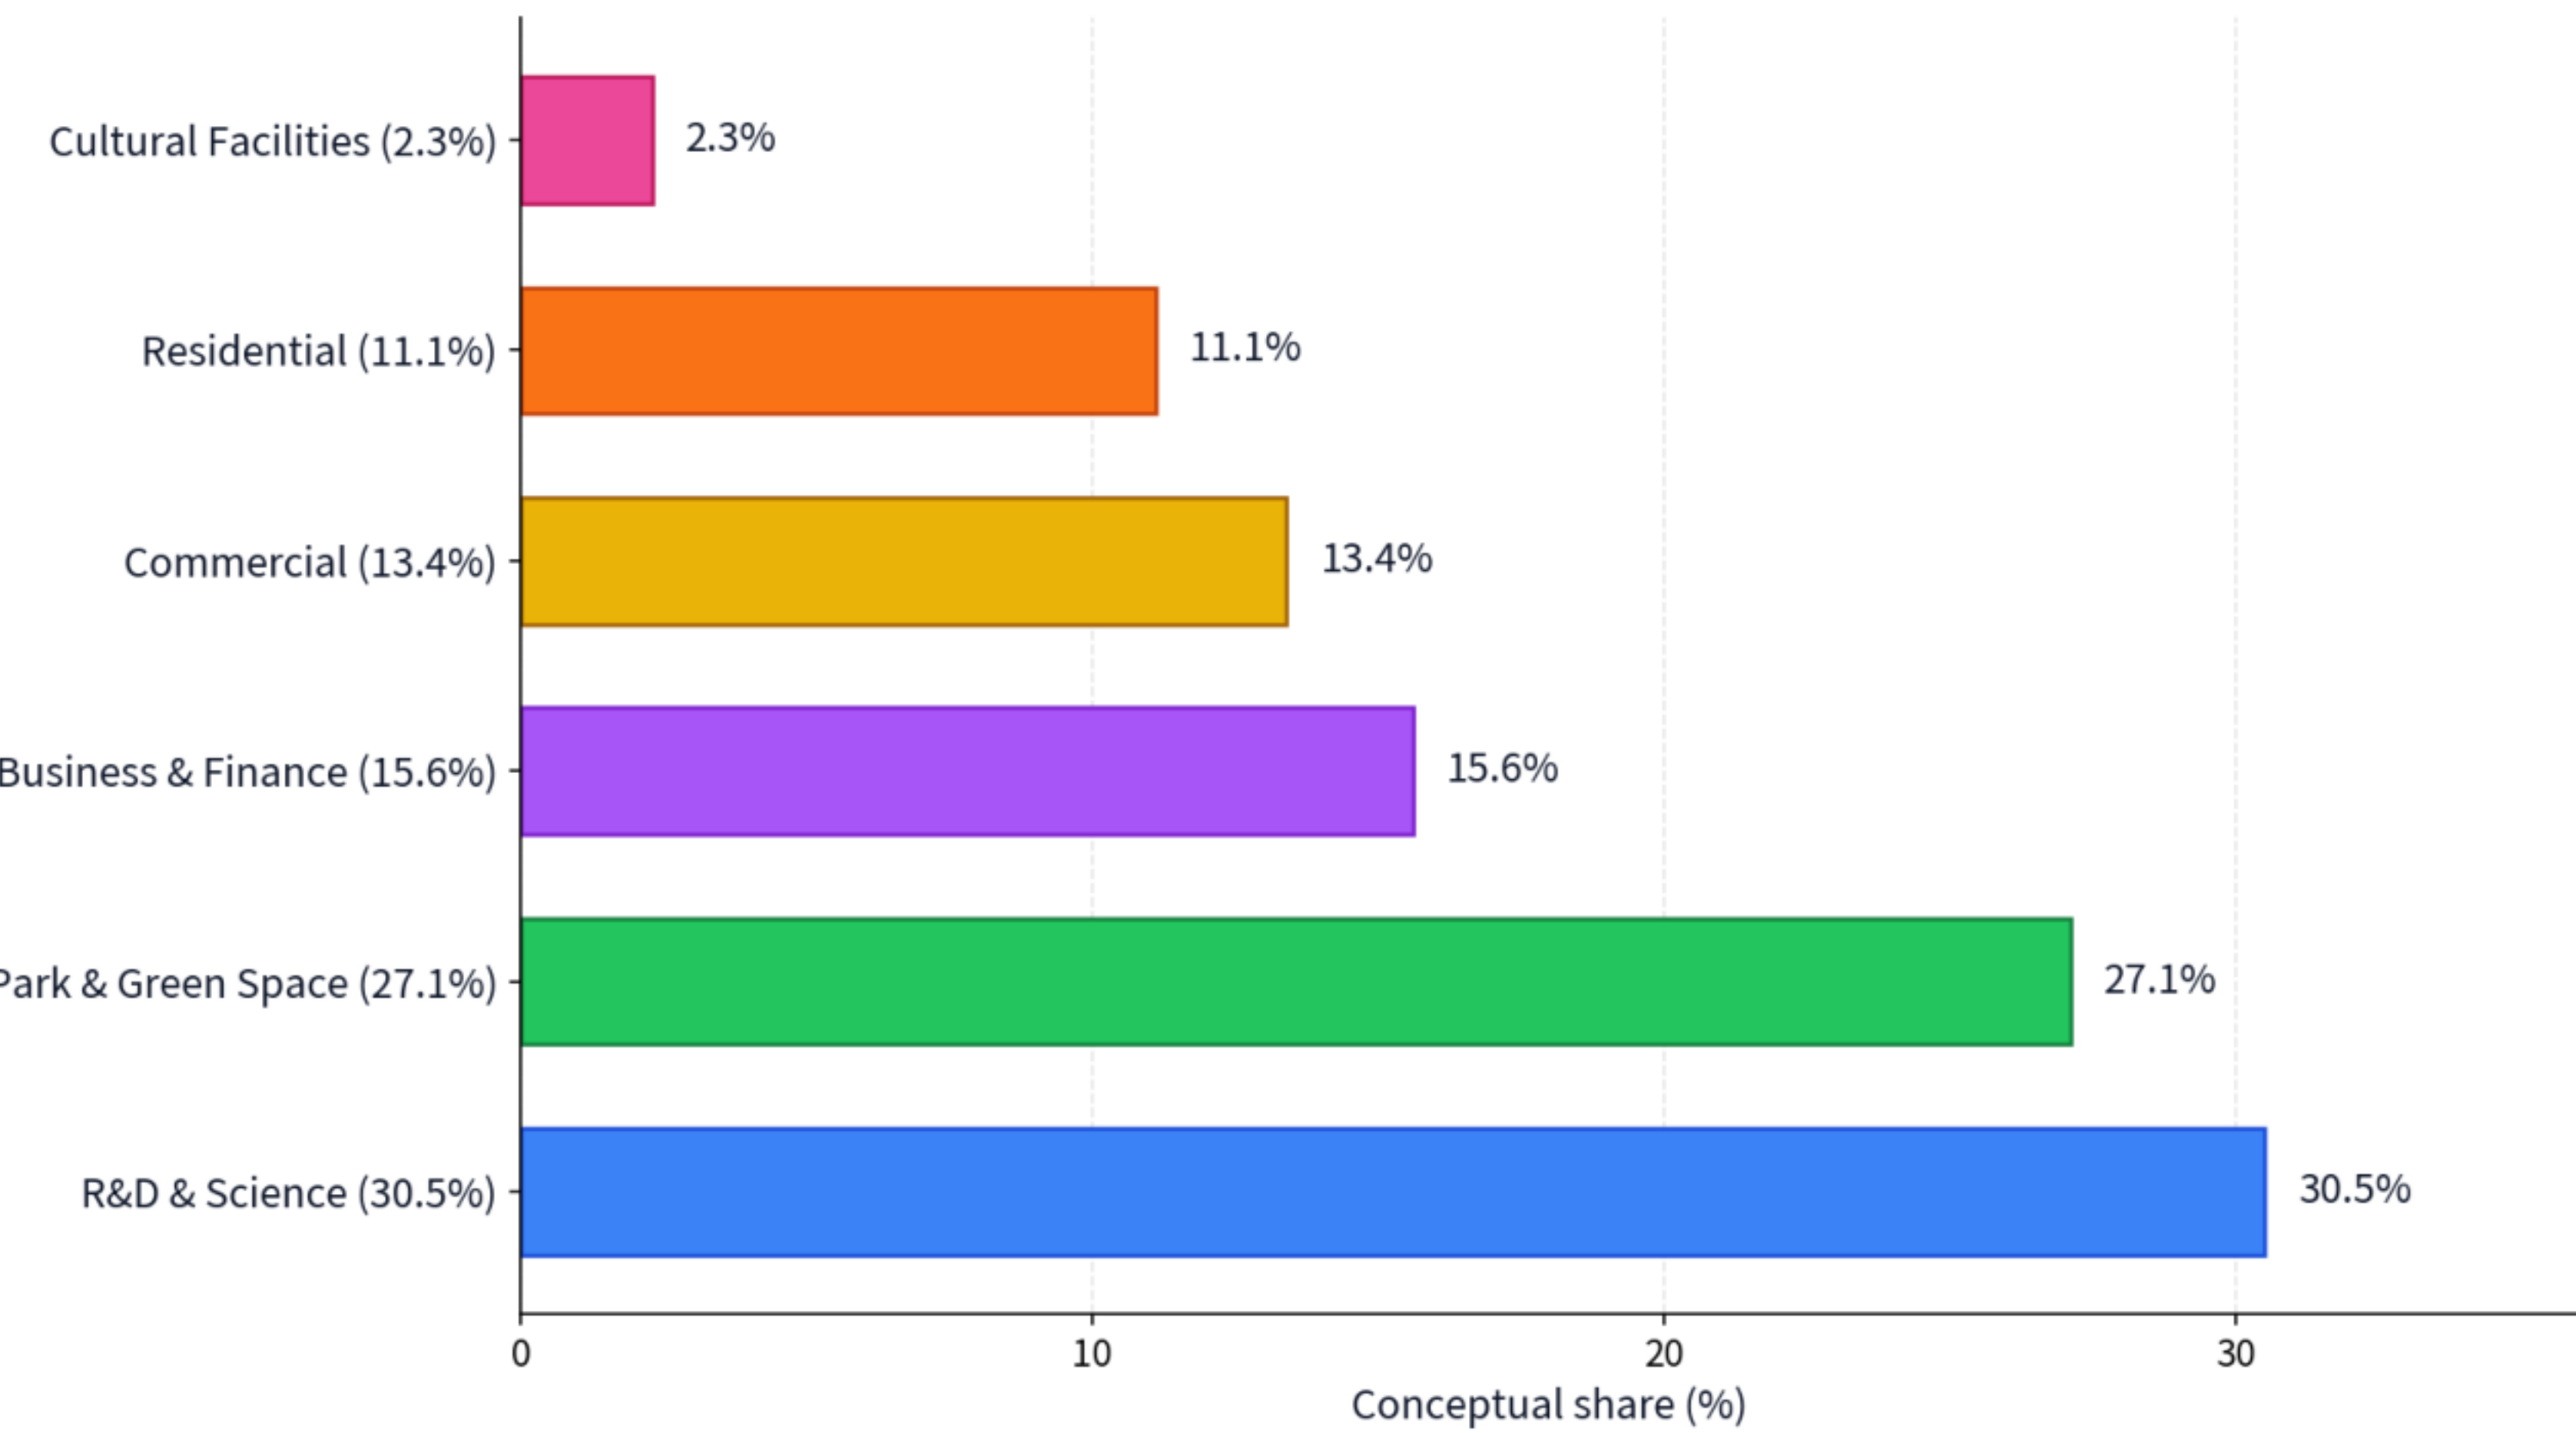

- 1 Corridor: JZ circularity belt
- 2 Belts: Slow-traffic loop + logistics
- 3 Nodes: Workshop-Market-Station
- Main Spine: 10.2 km continuous network
- Governance: Anonymized aggregation

All geometry consists of provisional concept model values; recalculate after official data release.

Conceptual Land-Use Structure (24 Zones)

Single caliber: class area $\div$ provisional site area • Not statutory land use

PROVISIONAL boundary • not an official redline • recalculate after official data

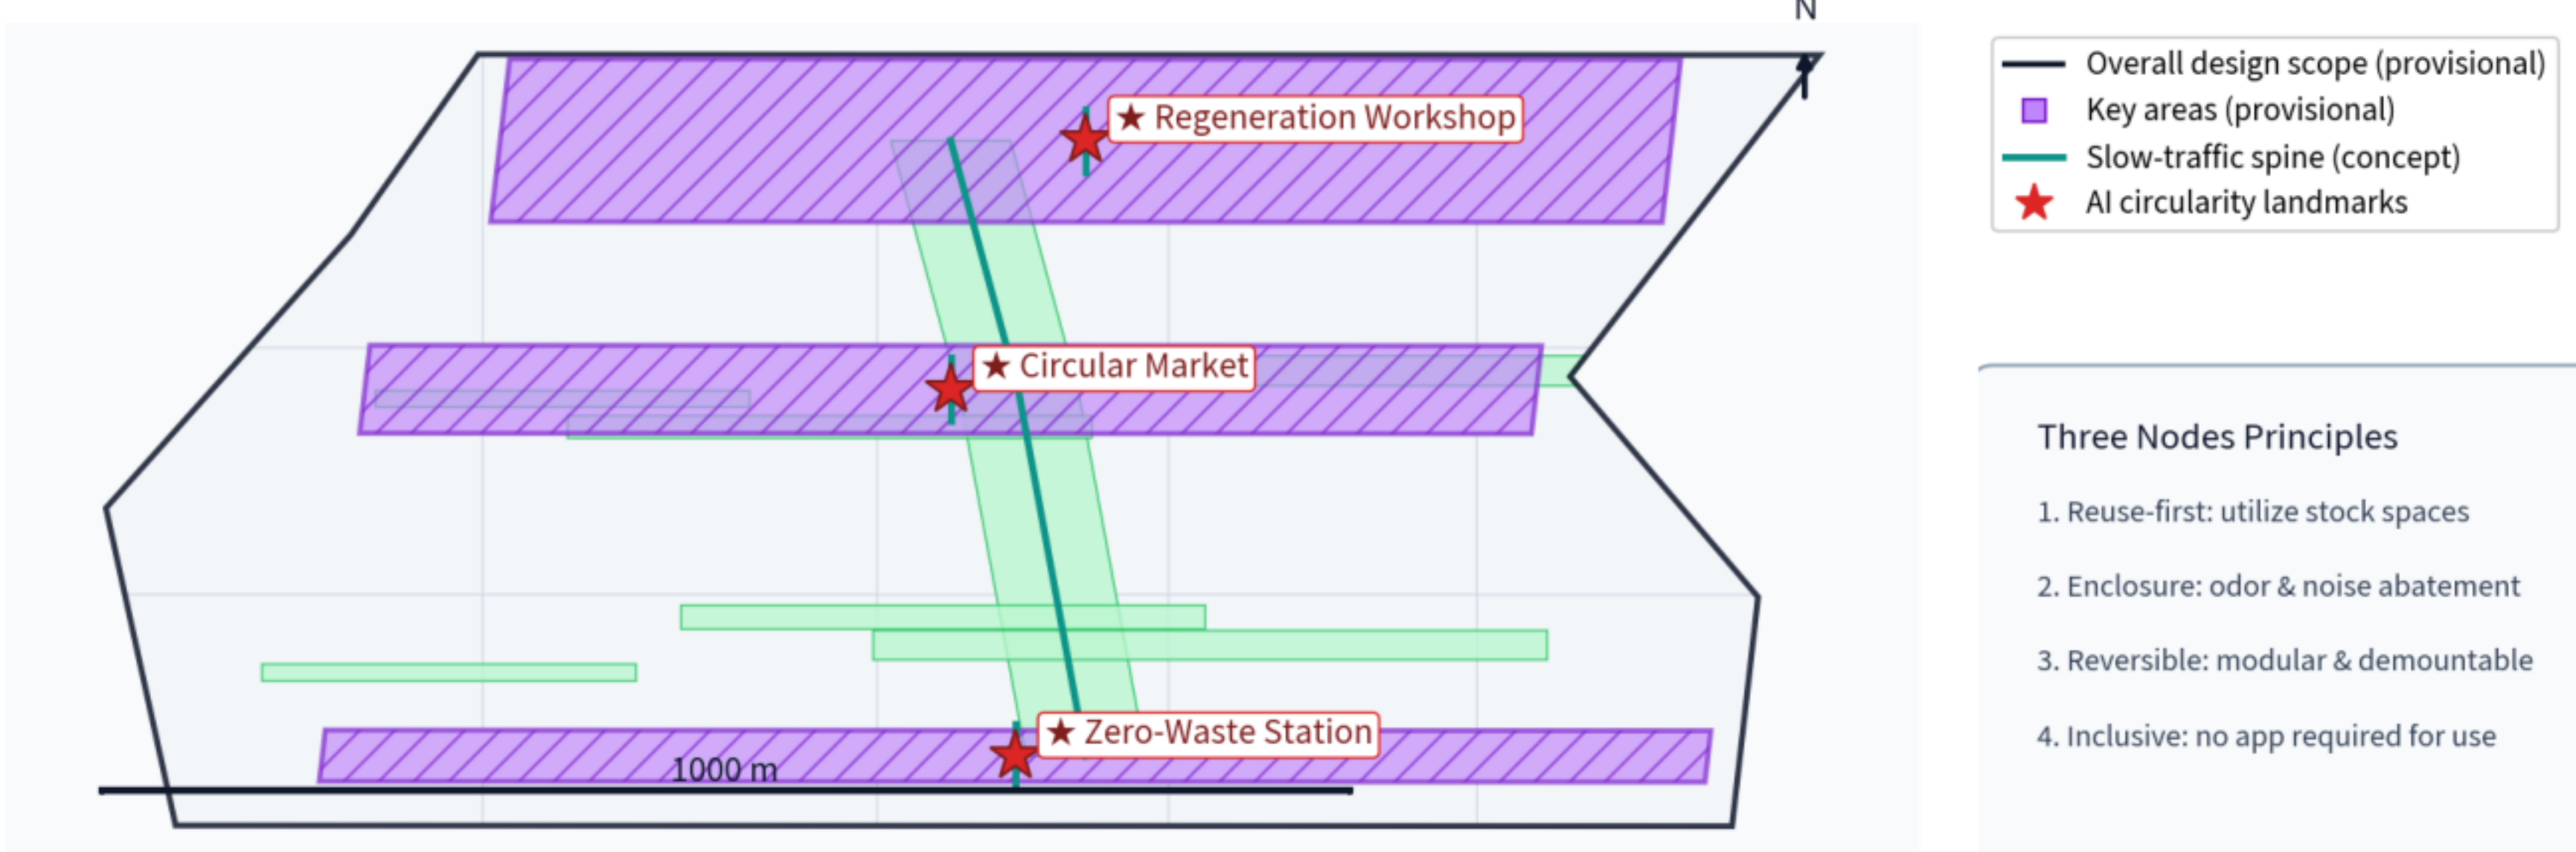

Land-use classes follow the national Guide for Land and Sea Spatial Classification. Shares are conceptual scenario values and recompute upon official regulatory plan release.

Detailed Design of Key Areas: Three Nodes Index & Tasks

One Workshop, One Market, One Station • Materials-Life-Daily Loop • Low-Noise Low-Odor

PROVISIONAL boundary • not an official redline • recalculate after official data

Three Nodes Principles

1. Reuse-first: utilize stock spaces
2. Enclosure: odor & noise abatement
3. Reversible: modular & demountable
4. Inclusive: no app required for use

Node 1: Workshop (Zhongzhiyuan)

Park-level circularity node • Landmark 'Material Gate'

Scope: CDW recycling • used material sorting • recycled material showcase
Space: Closed low-noise workshop • open-air display yard • gallery
Features: Designer prototyping benches • sample wall • low-glare night lighting

Node 2: Circular Market (AI Community)

Community circularity ground • Landmark 'Exchange Ring'

Scope: Idle barter exchange • item story tags • repair corner • points demo
Space: Reversible modular stalls • removable canopy • storage lockers
Operation: Time-shared ops (weekday repair / weekend swap) • human channels

Node 3: Zero-Waste Station (Dazhongsi)

Community sorting station • Landmark 'Compost Blossom'

Scope: Classified sorting • on-site composting • education • reward desk
Space: Closed sorting room • compost room • automated drop chutes
Governance: Pocket showcase garden • anonymized aggregation • human review

Workshop (Dismantle & Sort • Materials) $\rightarrow$ Market (Swap & Repair • Life) $\rightarrow$ Station (Compost & Sort • Daily)

Node sitings are conceptual envelopes; statutory land use is not altered. Building envelopes remain unknown until official surveys are released.

All geometry consists of provisional concept model values; recalculate after official data release.

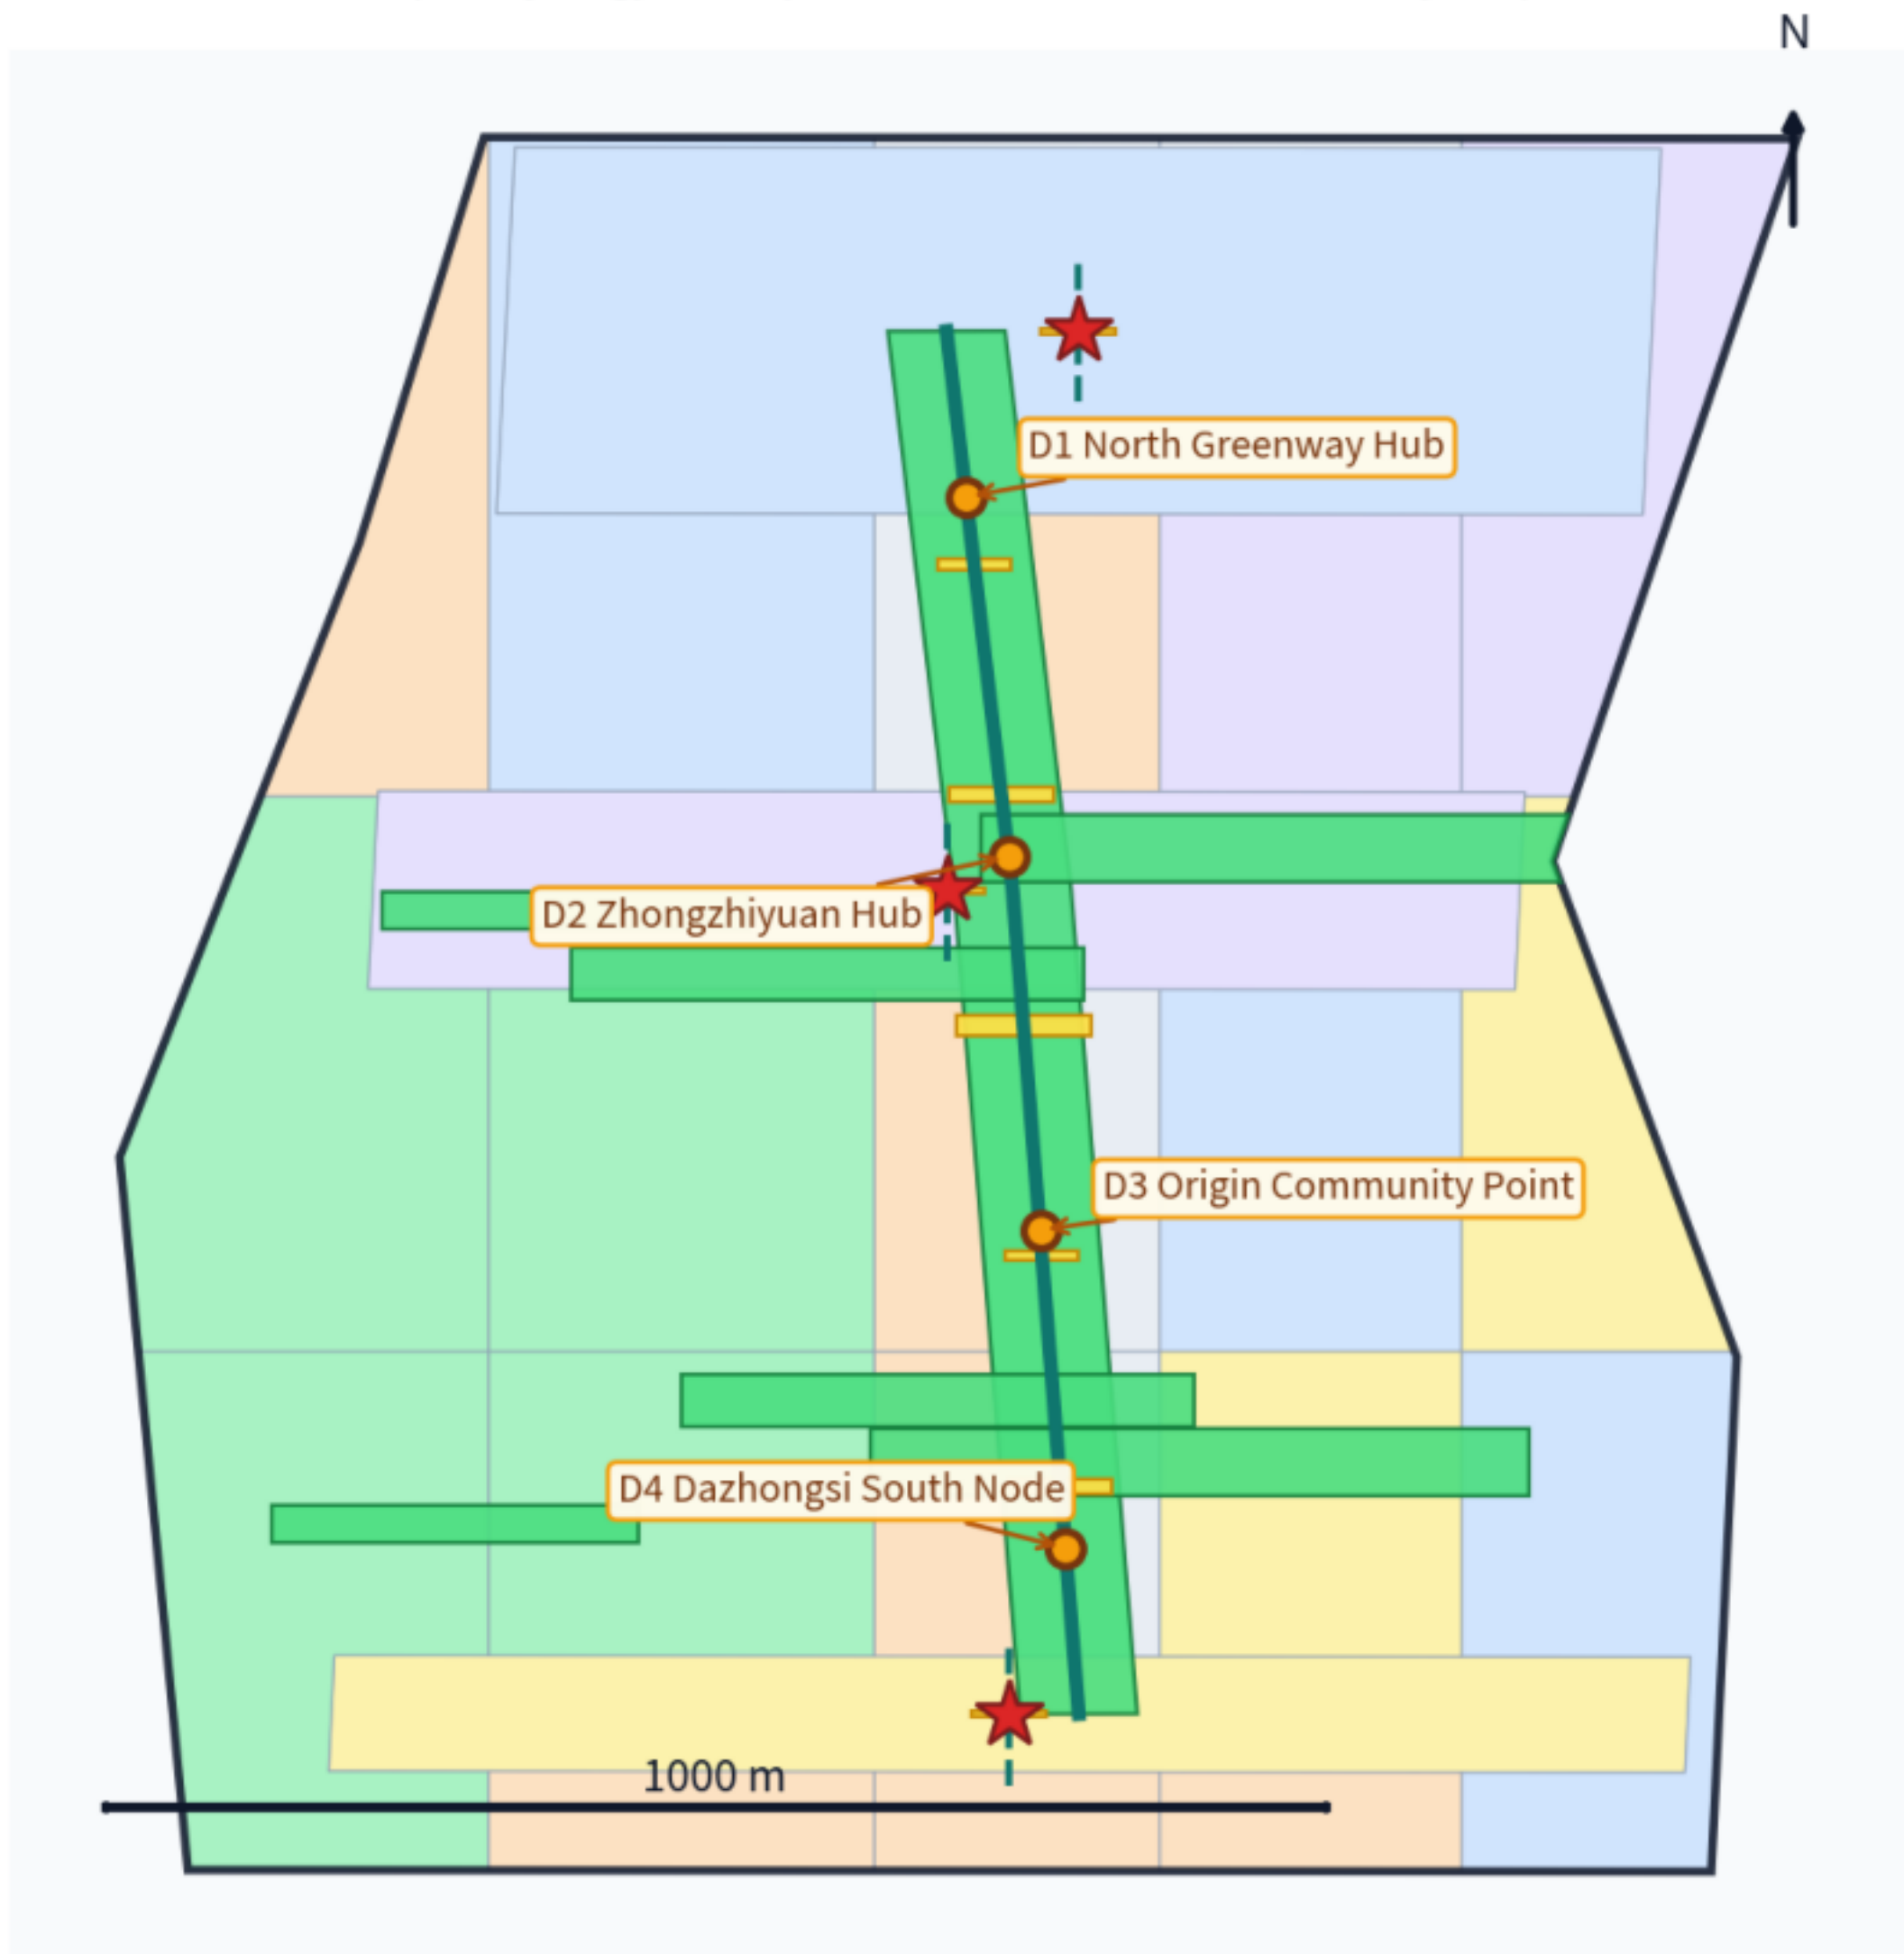

ZERO • JZ: Mobility Blue-Green, AI Ecosystem & Metrics (Concept • A0 Board 2/2)

10.2 km slow-traffic spine • D1–D4 drop-off hubs attached • 12 AI+ scenario cards • Anonymized aggregation & human review

PROVISIONAL boundary • not an official redline • recalculate after official data

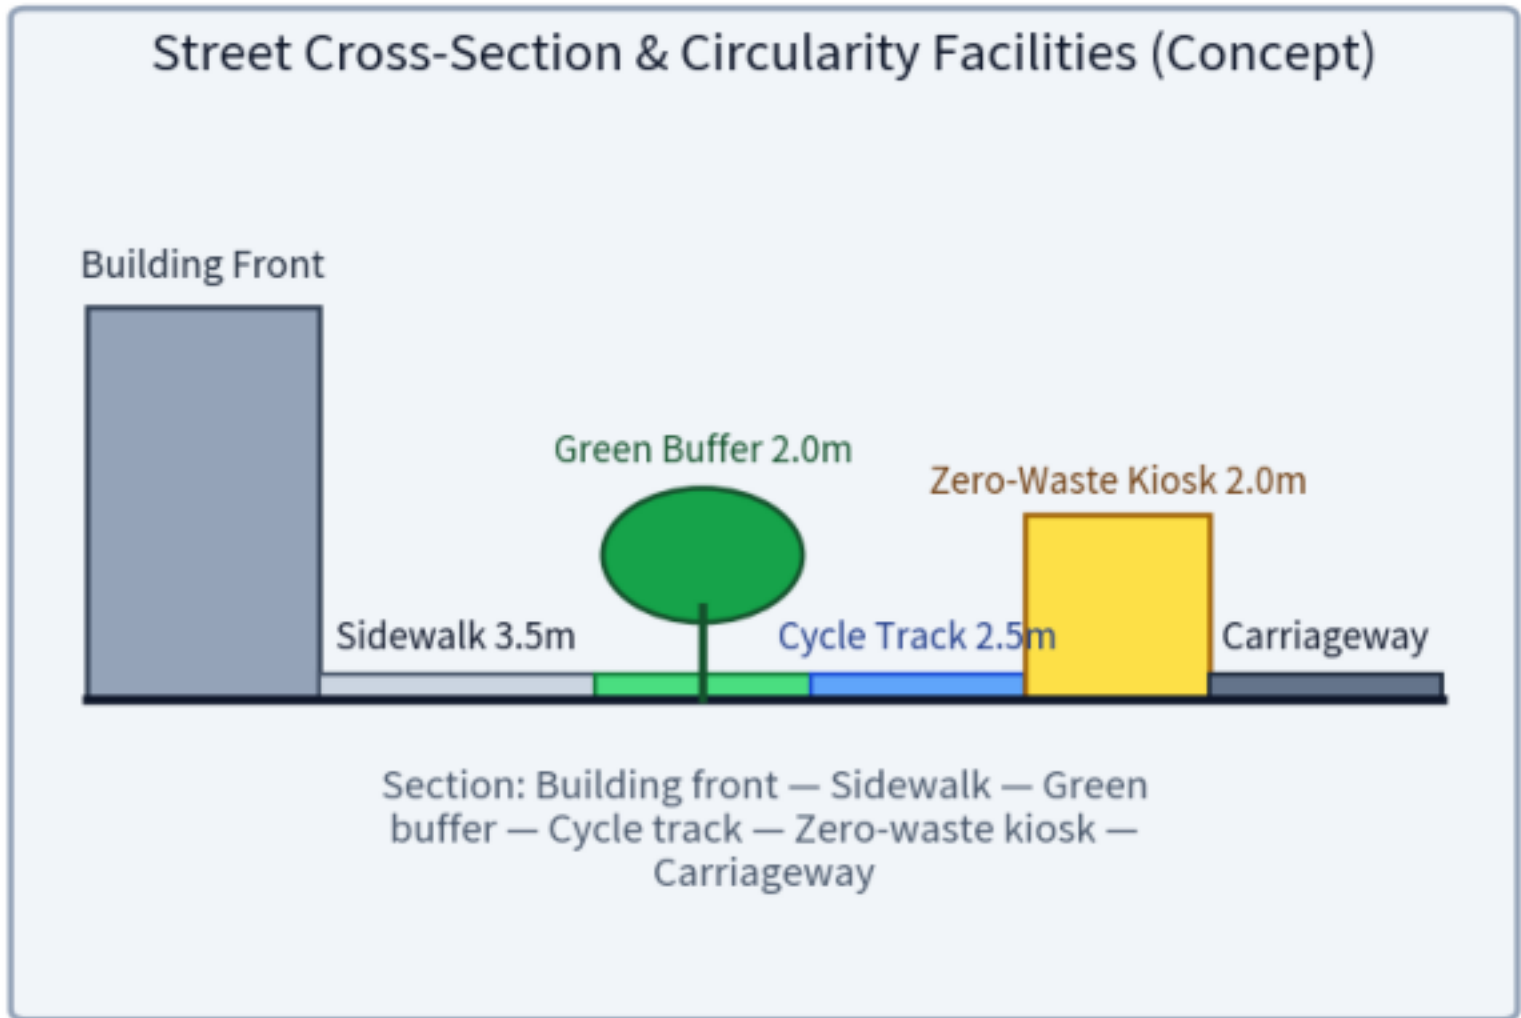

Mobility & Blue-Green Network: Spine, Hubs & Street Section

10.2 km slow-traffic spine synergy • Drop-off hubs D1–D4 attached directly to spine

Cross-section and drop-off nodes are conceptual sketches, not engineering construction drawings. Baseline capacity follows official surveys.

PROVISIONAL boundary • not an official redline • recalculate after official data

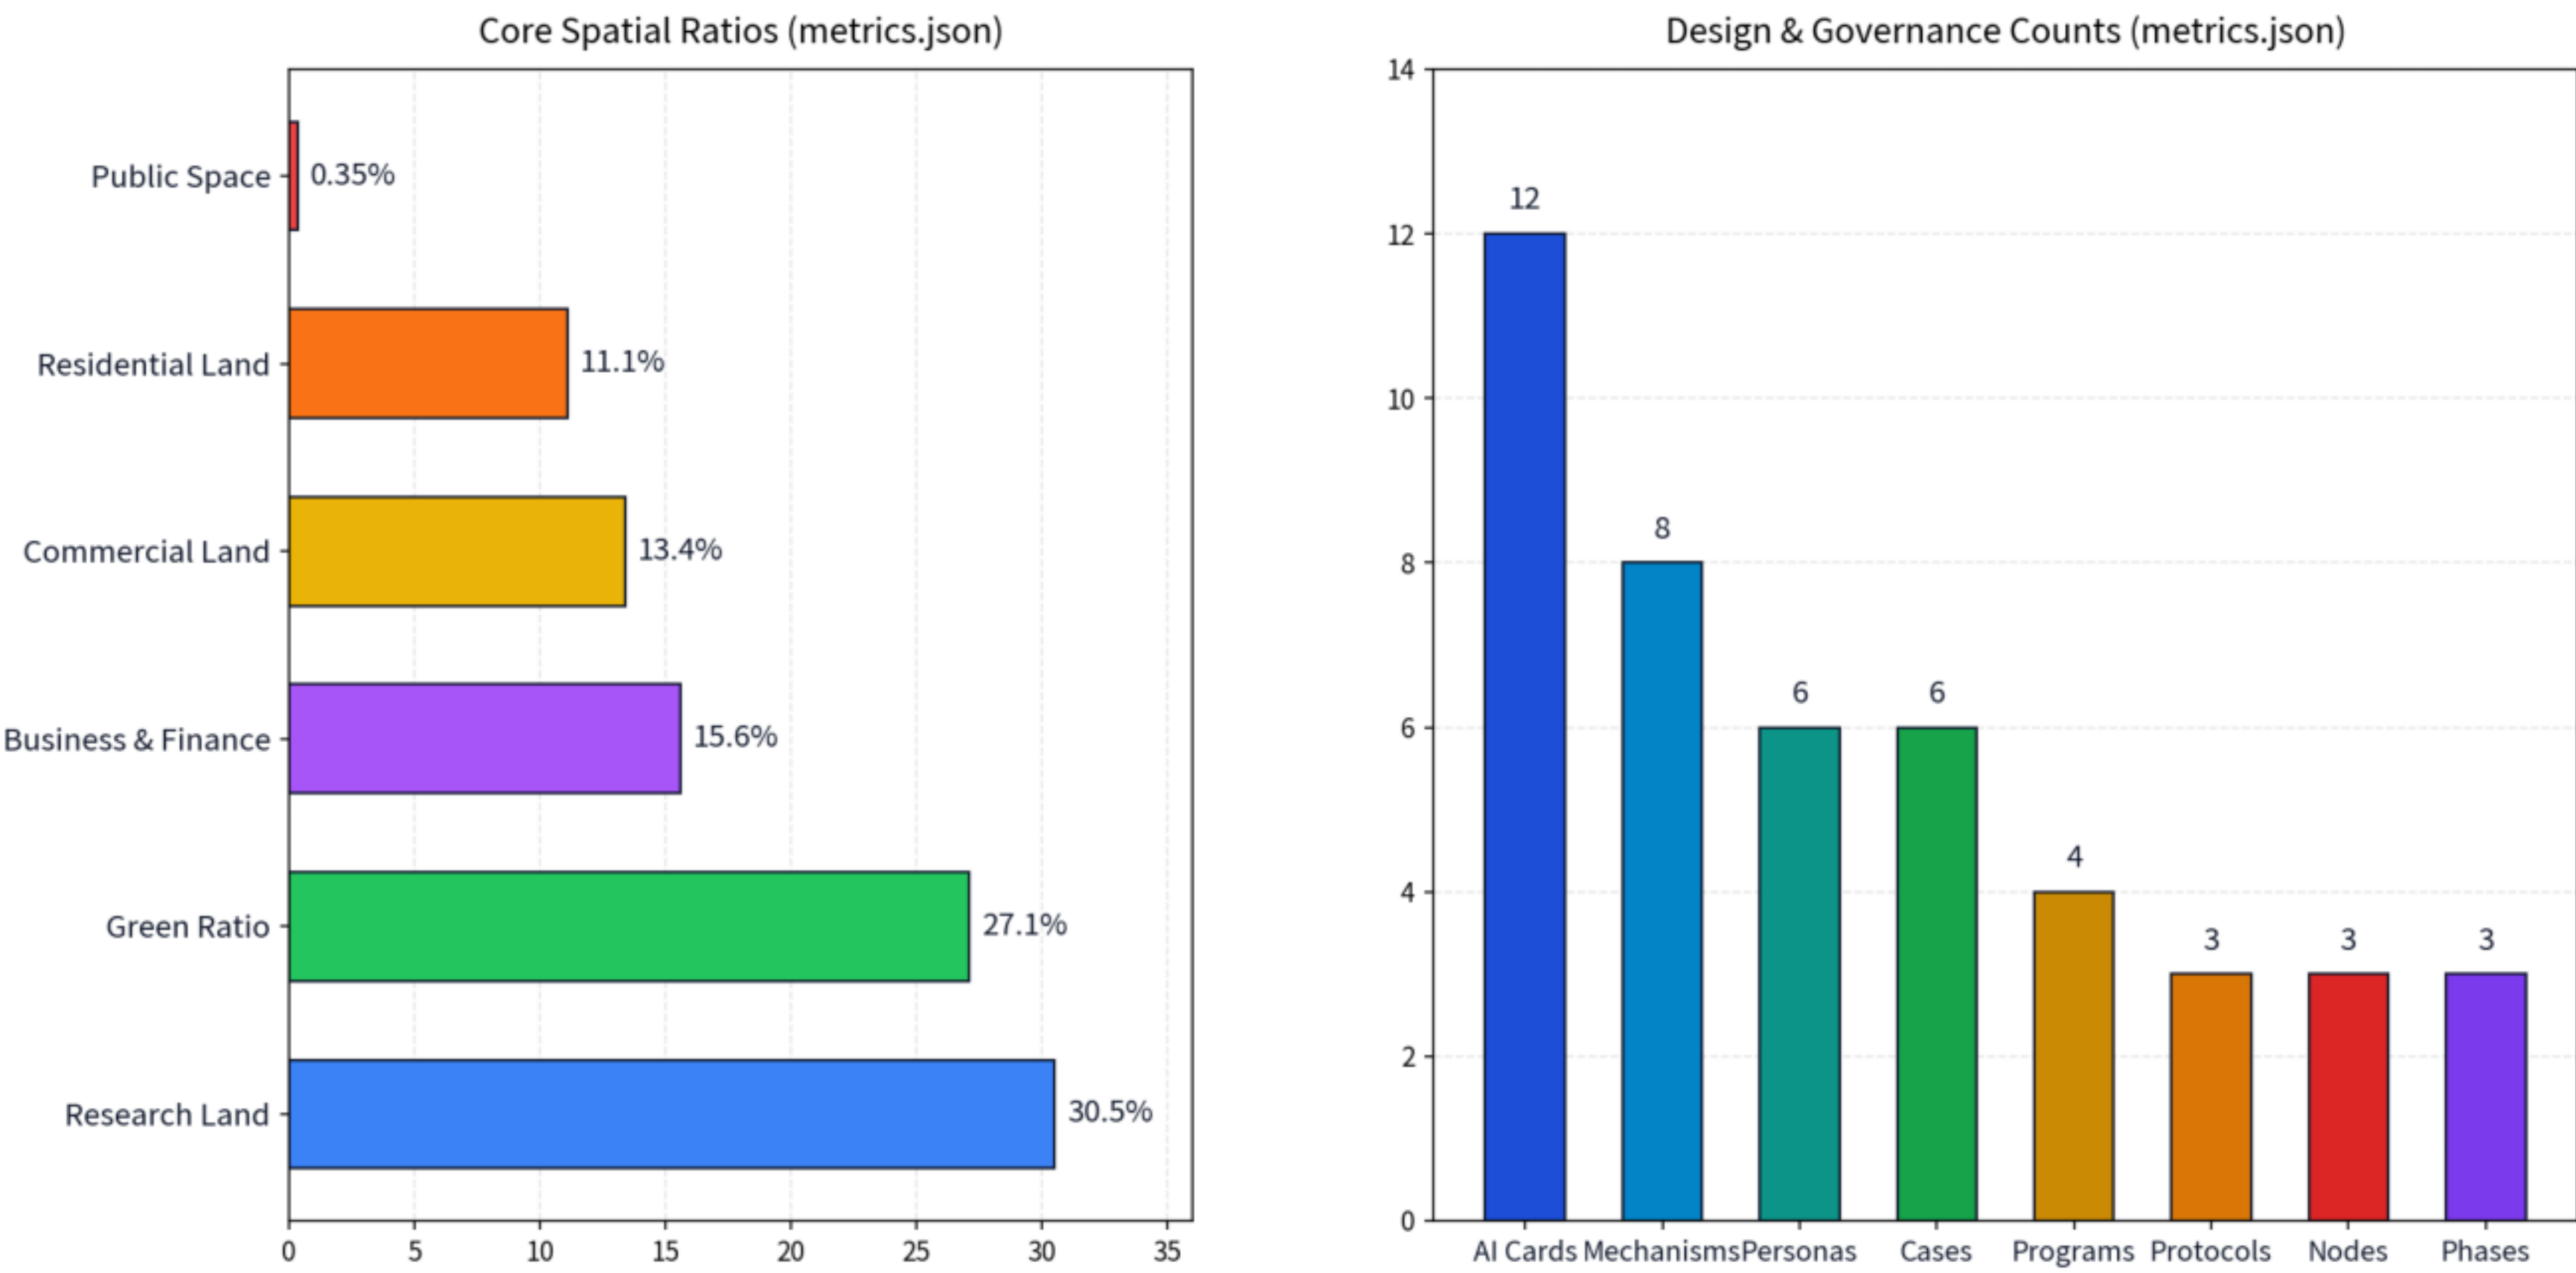

Mobility & Drop-off Hierarchy

- 1. Main Spine**
10.2 km continuous greenway
- 2. Neighborhood**
E-W pedestrian cross-links
- 3. Drop-off Hubs**
D1–D4 along spine at 300m radius
- 4. Logistics**
Time-shared off-peak hauling, sealed

Key Metric Evidence: Spatial Ratios, Counts & Protocols

Values from metrics.json (single caliber) • Confidence levels & recalculation triggers

PROVISIONAL boundary • not an official redline • recalculate after official data

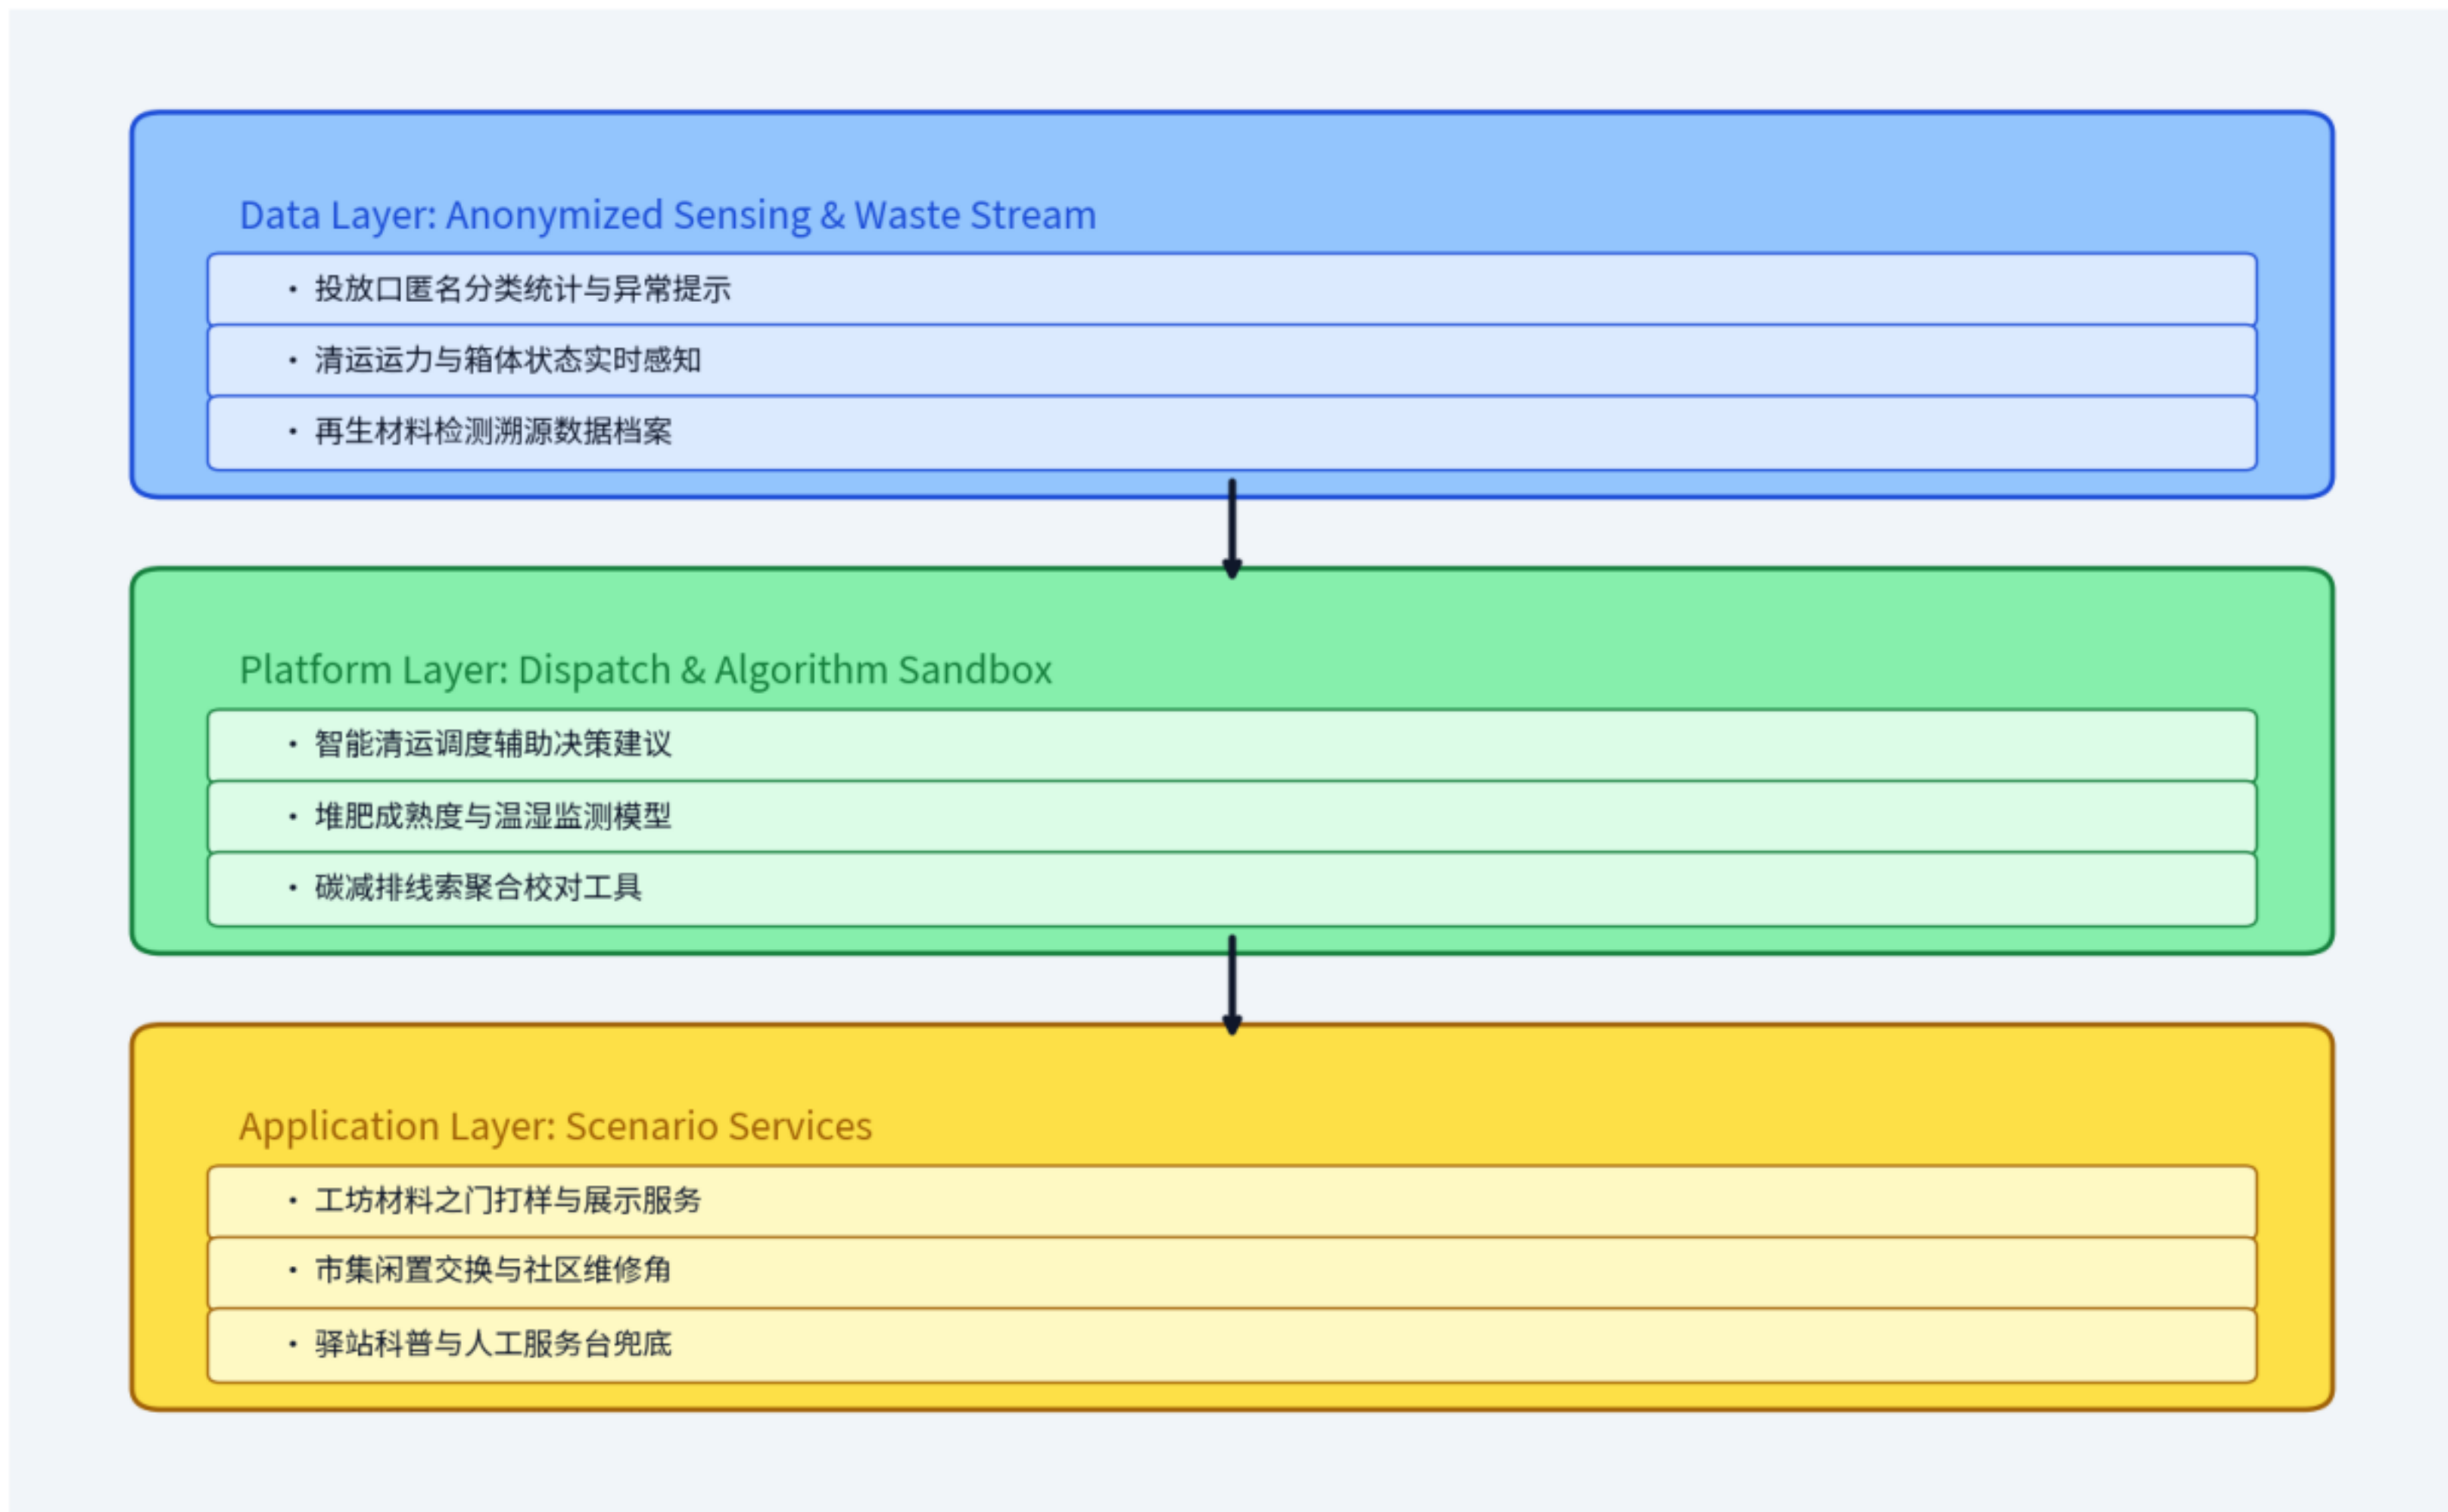

Source: metrics.json. Areas and ratios calculated from EPSG:4548 geometry; refreshed automatically upon official data release.

AI Innovation Ecosystem Atlas: Full-Stack Circularity

Waste streams translated to data, industry and spatial flows • Anonymized aggregation

PROVISIONAL boundary • not an official redline • recalculate after official data

All 12 scenario cards have named owners, non-AI fallback paths, and exit thresholds; no individual tracking.
