

ZhiLink Valley • Zhongguancun Tech Service Wing

Concept boards and validation center

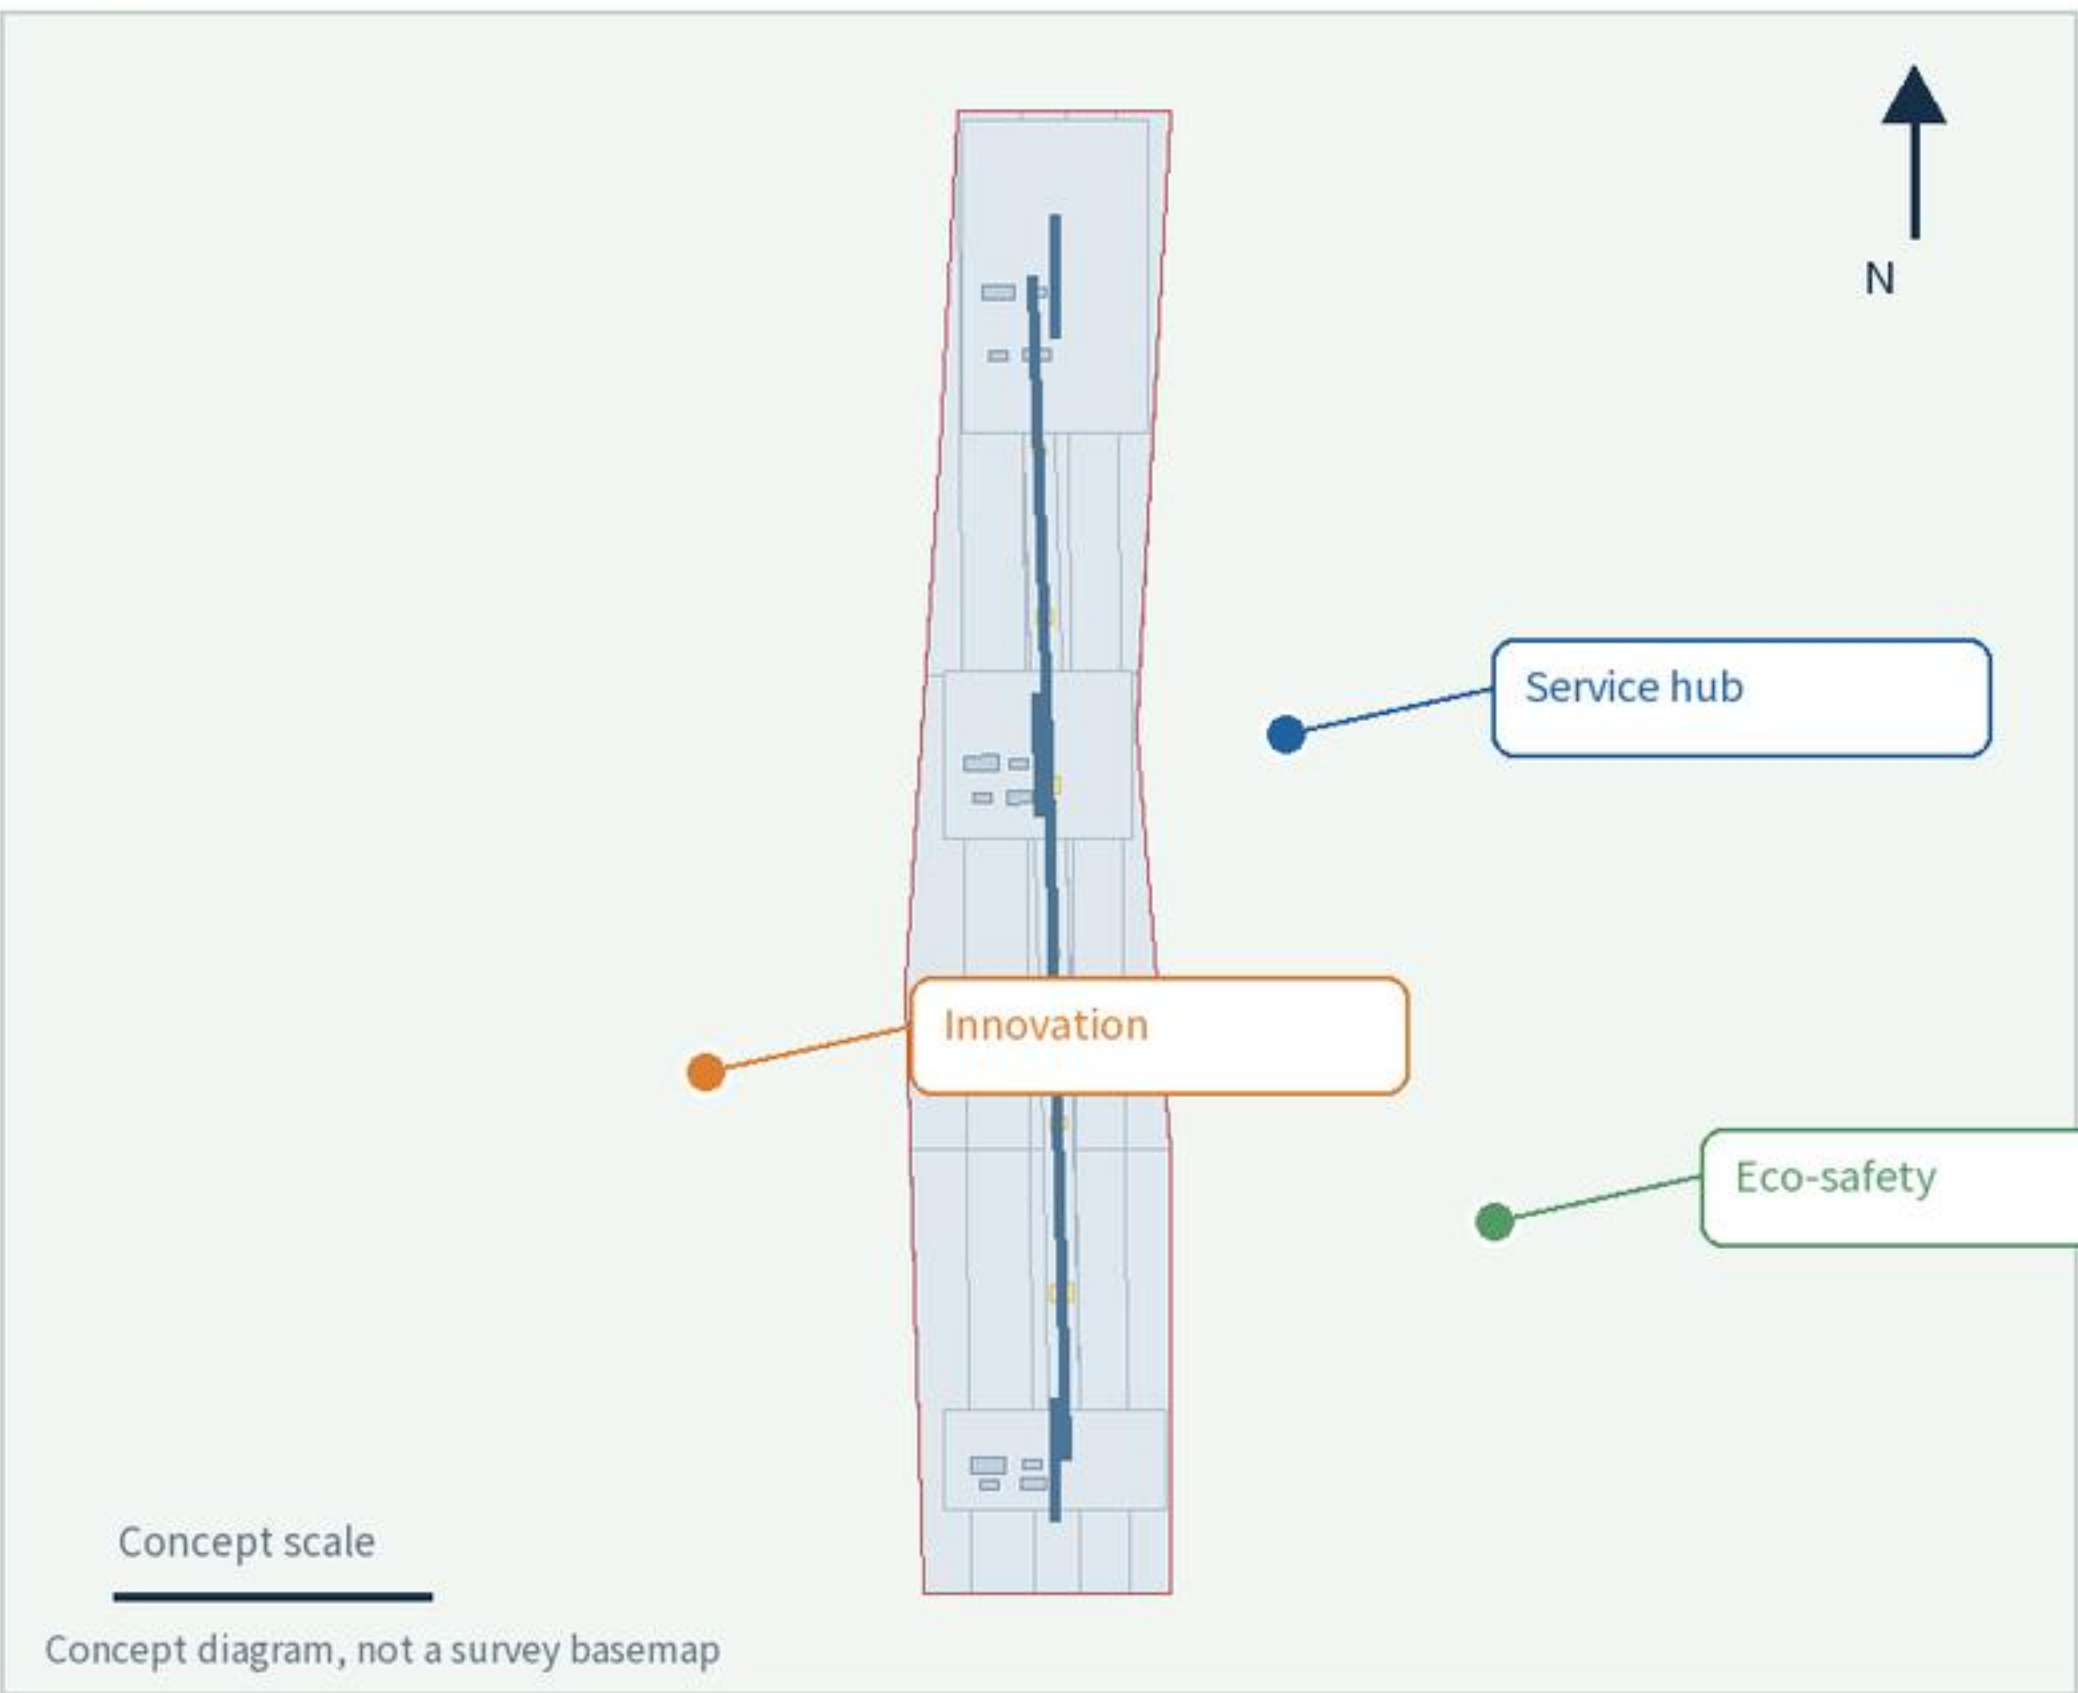

ZhiLink Valley • Element Link Belt

Zhongguancun Tech Service Wing: connect technology, capital, scenarios and talent through a testable service chain.

Concept design; coordinates, areas and capacities are planning-stage parameters, not survey or statutory boundaries.

System overview

Three relay spaces and five service functions.

Three relay spaces

Enterprise Accelerator • Industry Test Field • Global Service Inn

Five functions

Incubation, testing, exchange, talent and public green space

Three gates

Entry, transaction and operations gates control delivery risk

Scope and evidence

Scope boundary note
The red outline is a concept extent only; confirm controls, ownership and survey data before delivery.

ZhiLink Valley • Zhongguancun Tech Service Wing • concept comparison set

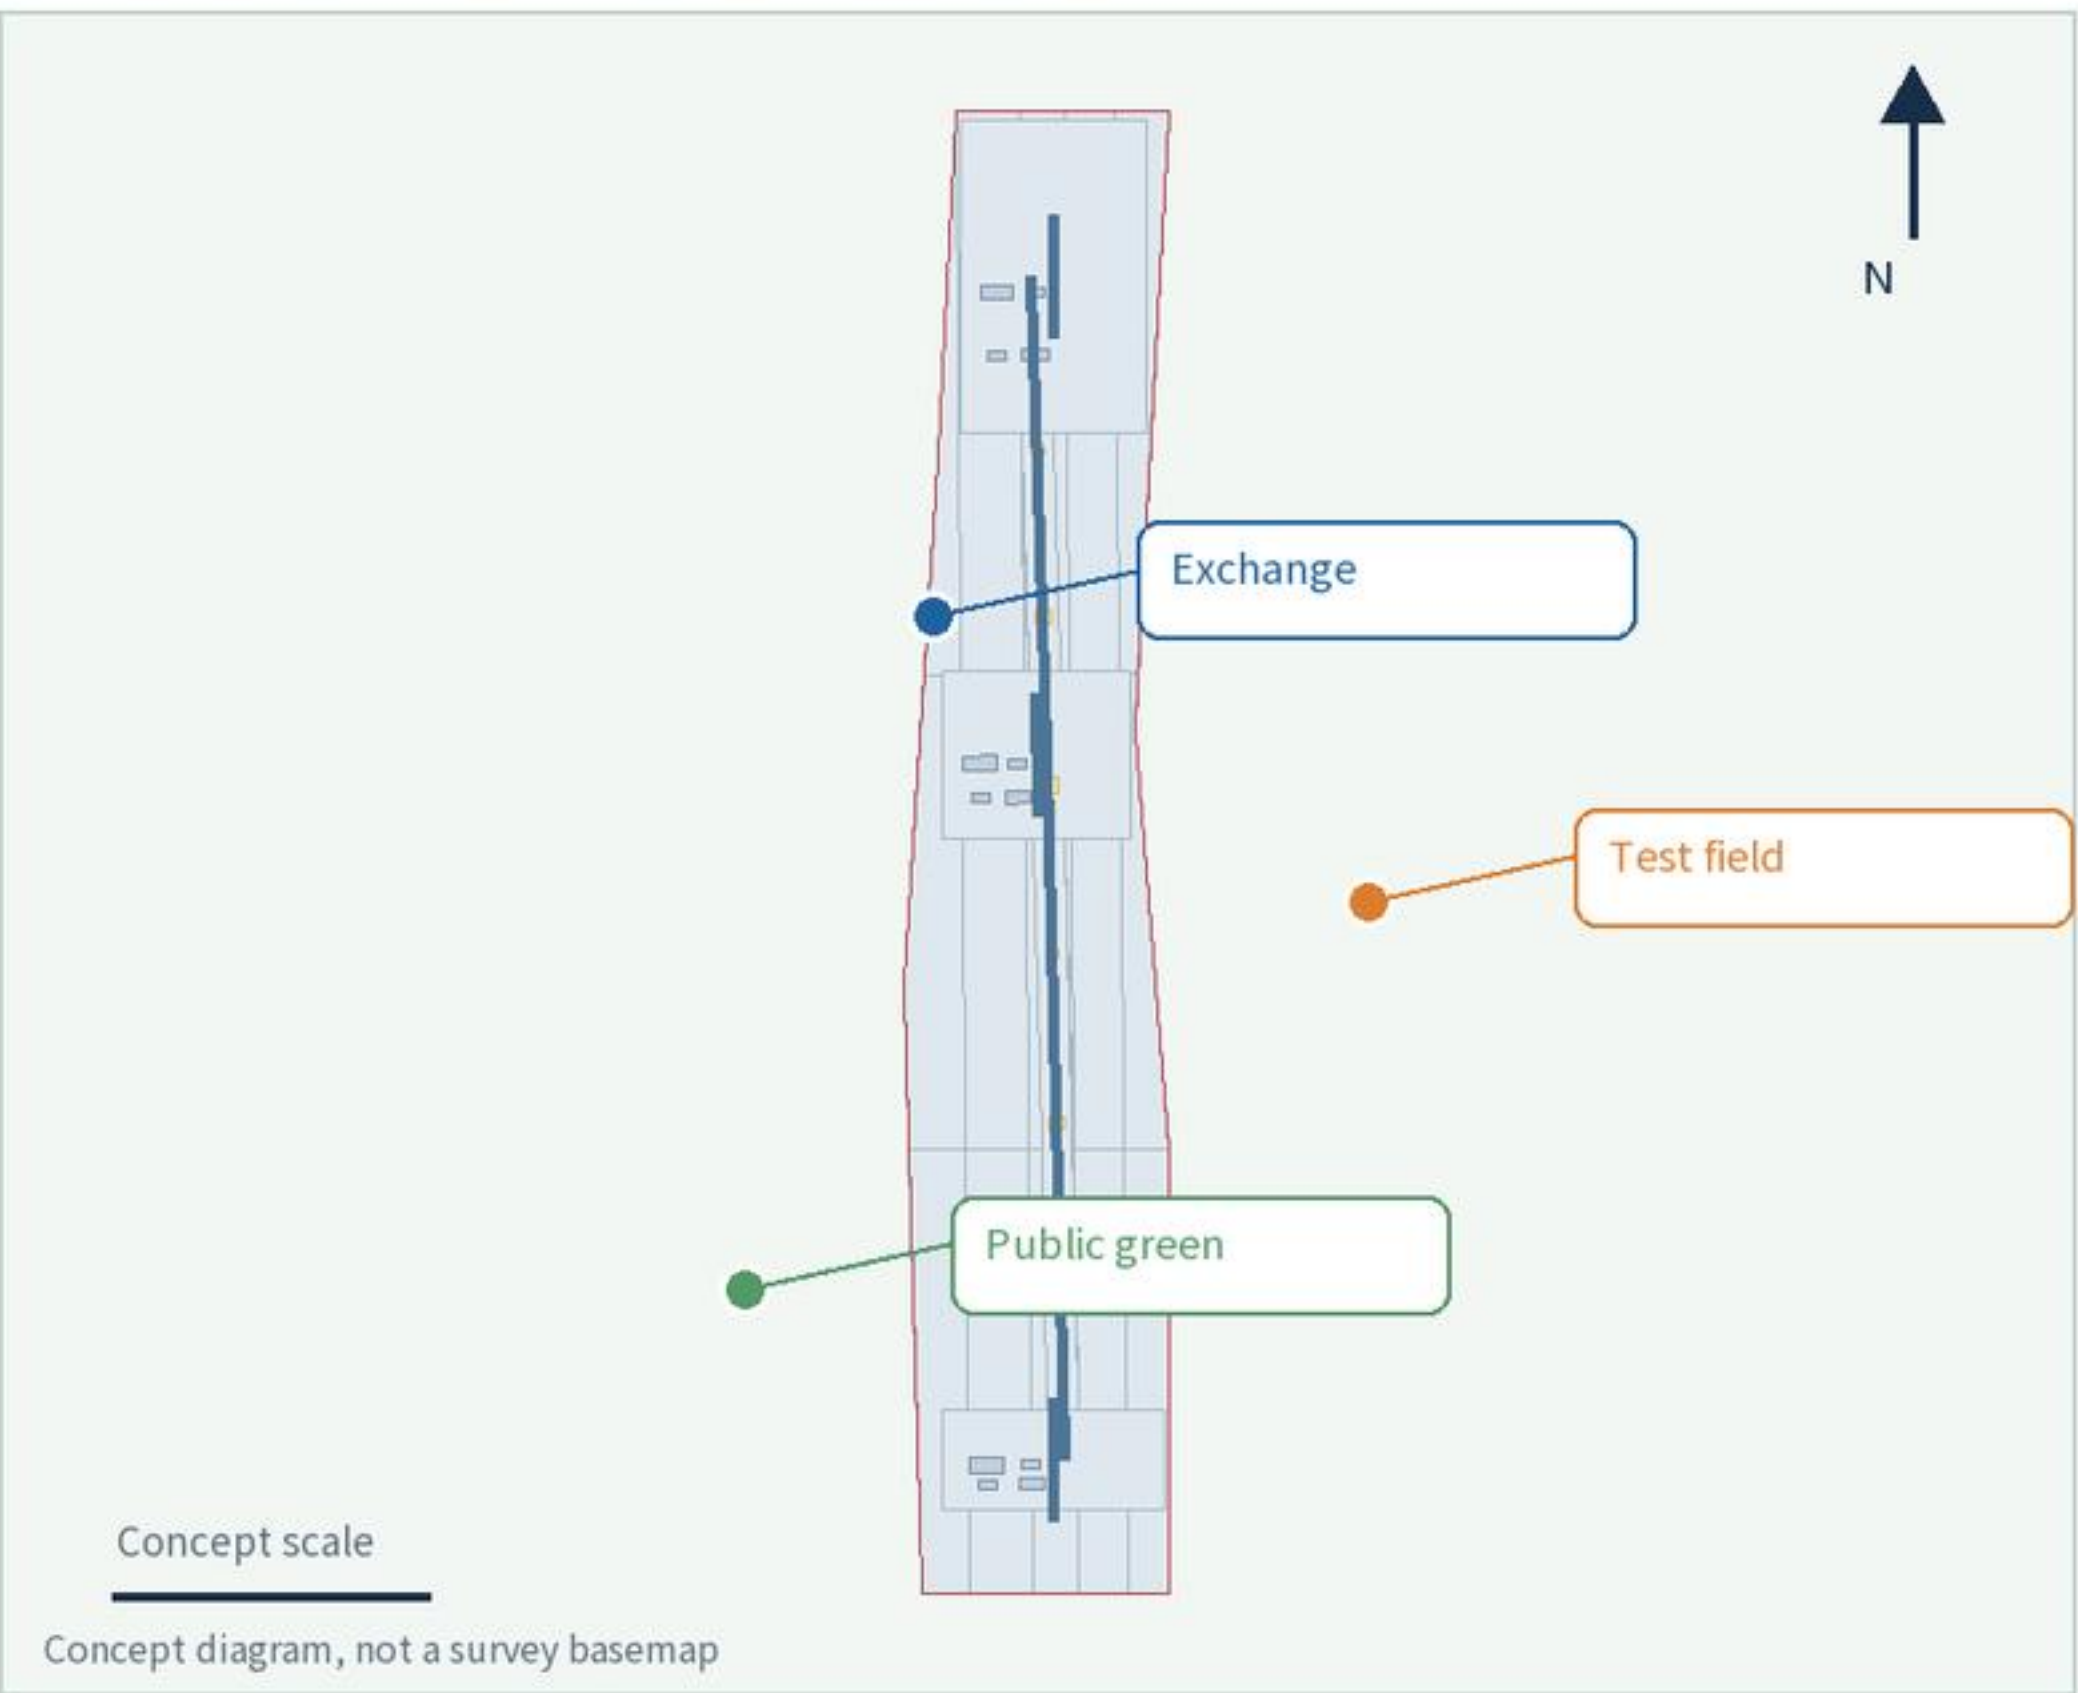

Land-use structure and function mix

The plan is defined by a service mix, not a single capacity number.

Concept design; coordinates, areas and capacities are planning-stage parameters, not survey or statutory boundaries.

Land-use and functions

Map colors are paired one-to-one with the function cards.

Exchange Hall

Open exchange and matchmaking

Enterprise Accelerator

Fast entry for early-stage firms

Industry Test Field

Test scenarios instead of display-only showcases

Tech Transaction

Technology, patents and capital exchange

Talent Services

Engineers, founders and global teams

Public Green

Rest, legibility and operations

Blue-green Buffer

Sponge infrastructure and active edges

Safety and Back-of-house

Operational tiers and emergency switching

ZhiLink Valley • Zhongguancun Tech Service Wing • concept comparison set

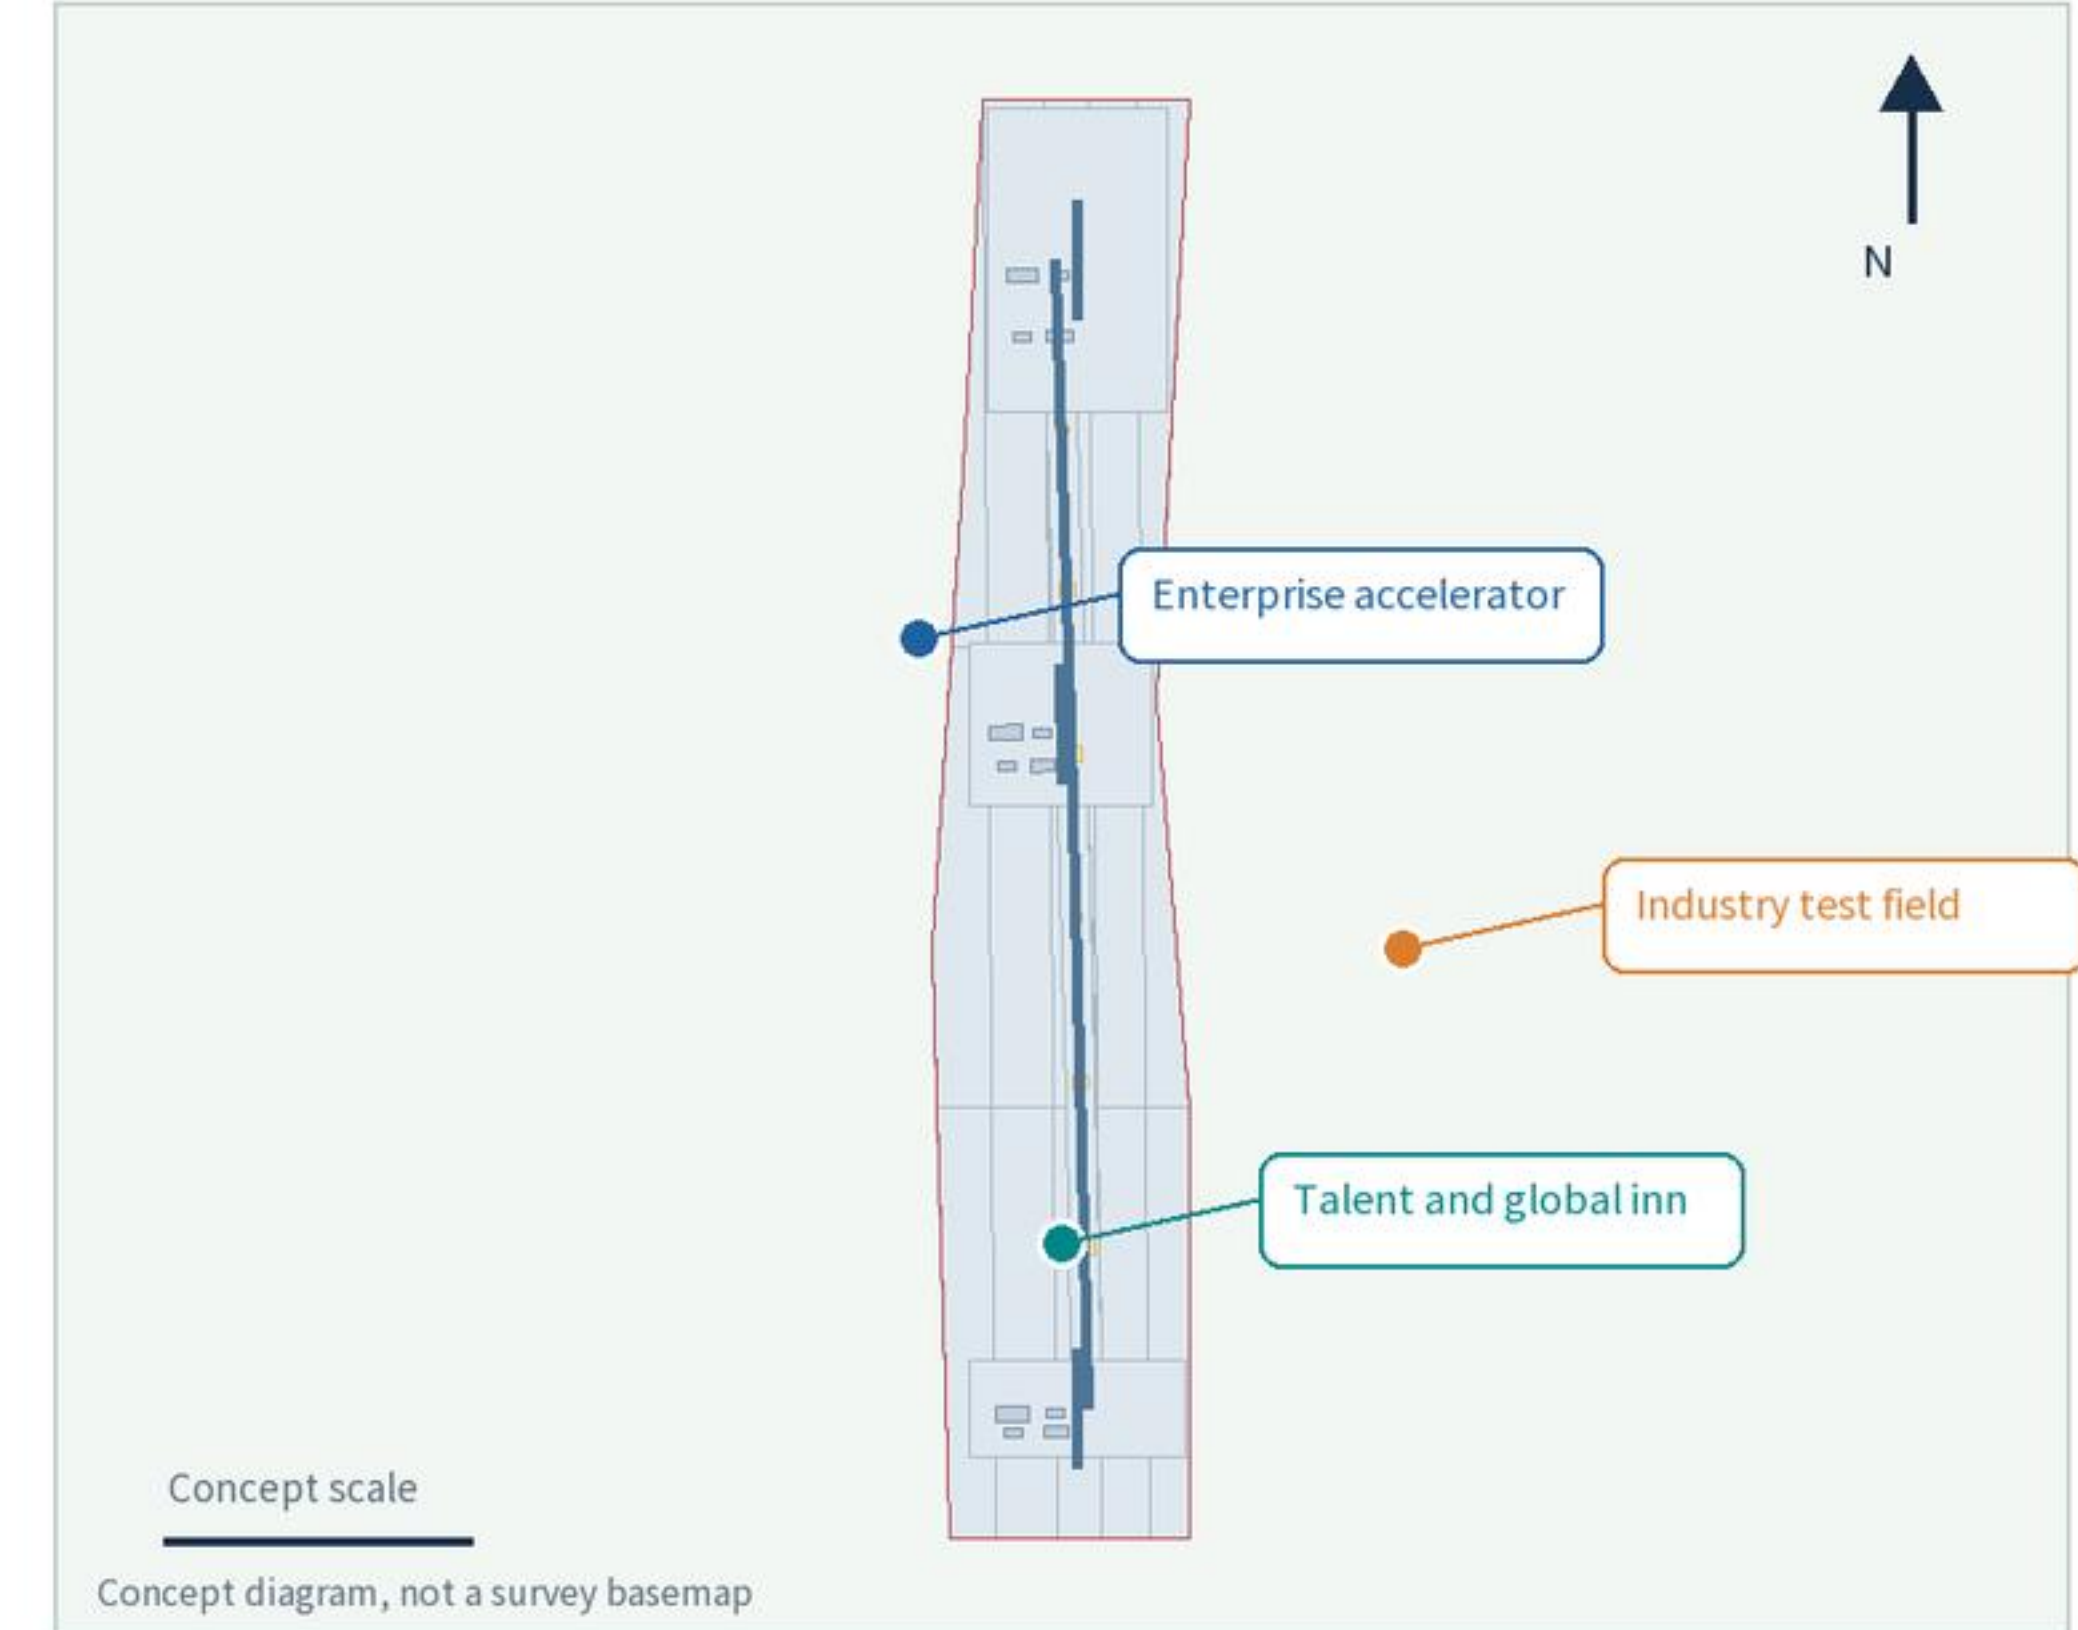

Three relay spaces: from entry to global service

Each relay has one mission, one test scenario and one evidence trail.

Concept design; coordinates, areas and capacities are planning-stage parameters, not survey or statutory boundaries.

Relay relationship

Enter, test, then scale.

Enterprise Accelerator

Entry gate: identify needs, match resources and run a first test.
Metric: first response / completed entry

Industry Test Field

Middle gate: connect technology to a real operating scenario.
Metric: test cycle / correction return rate

Talent and Global Service Inn

Scale gate: connect talent, teams and international partners.
Metric: case close time / repeat use

Mobility, blue-green systems and safety gates

Manage accessibility and risk control as one operating diagram.

Concept design; coordinates, areas and capacities are planning-stage parameters, not survey or statutory boundaries.

Operating framework

Walking, slow mobility, back-of-house and blue-green layers.

Accessibility first

Continuous barrier-free paths, legible wayfinding and night lighting

Blue-green safety

Manage runoff, rainwater, green links and warning points together

Delivery gates

Pre-entry compliance, live operations monitoring and emergency switching

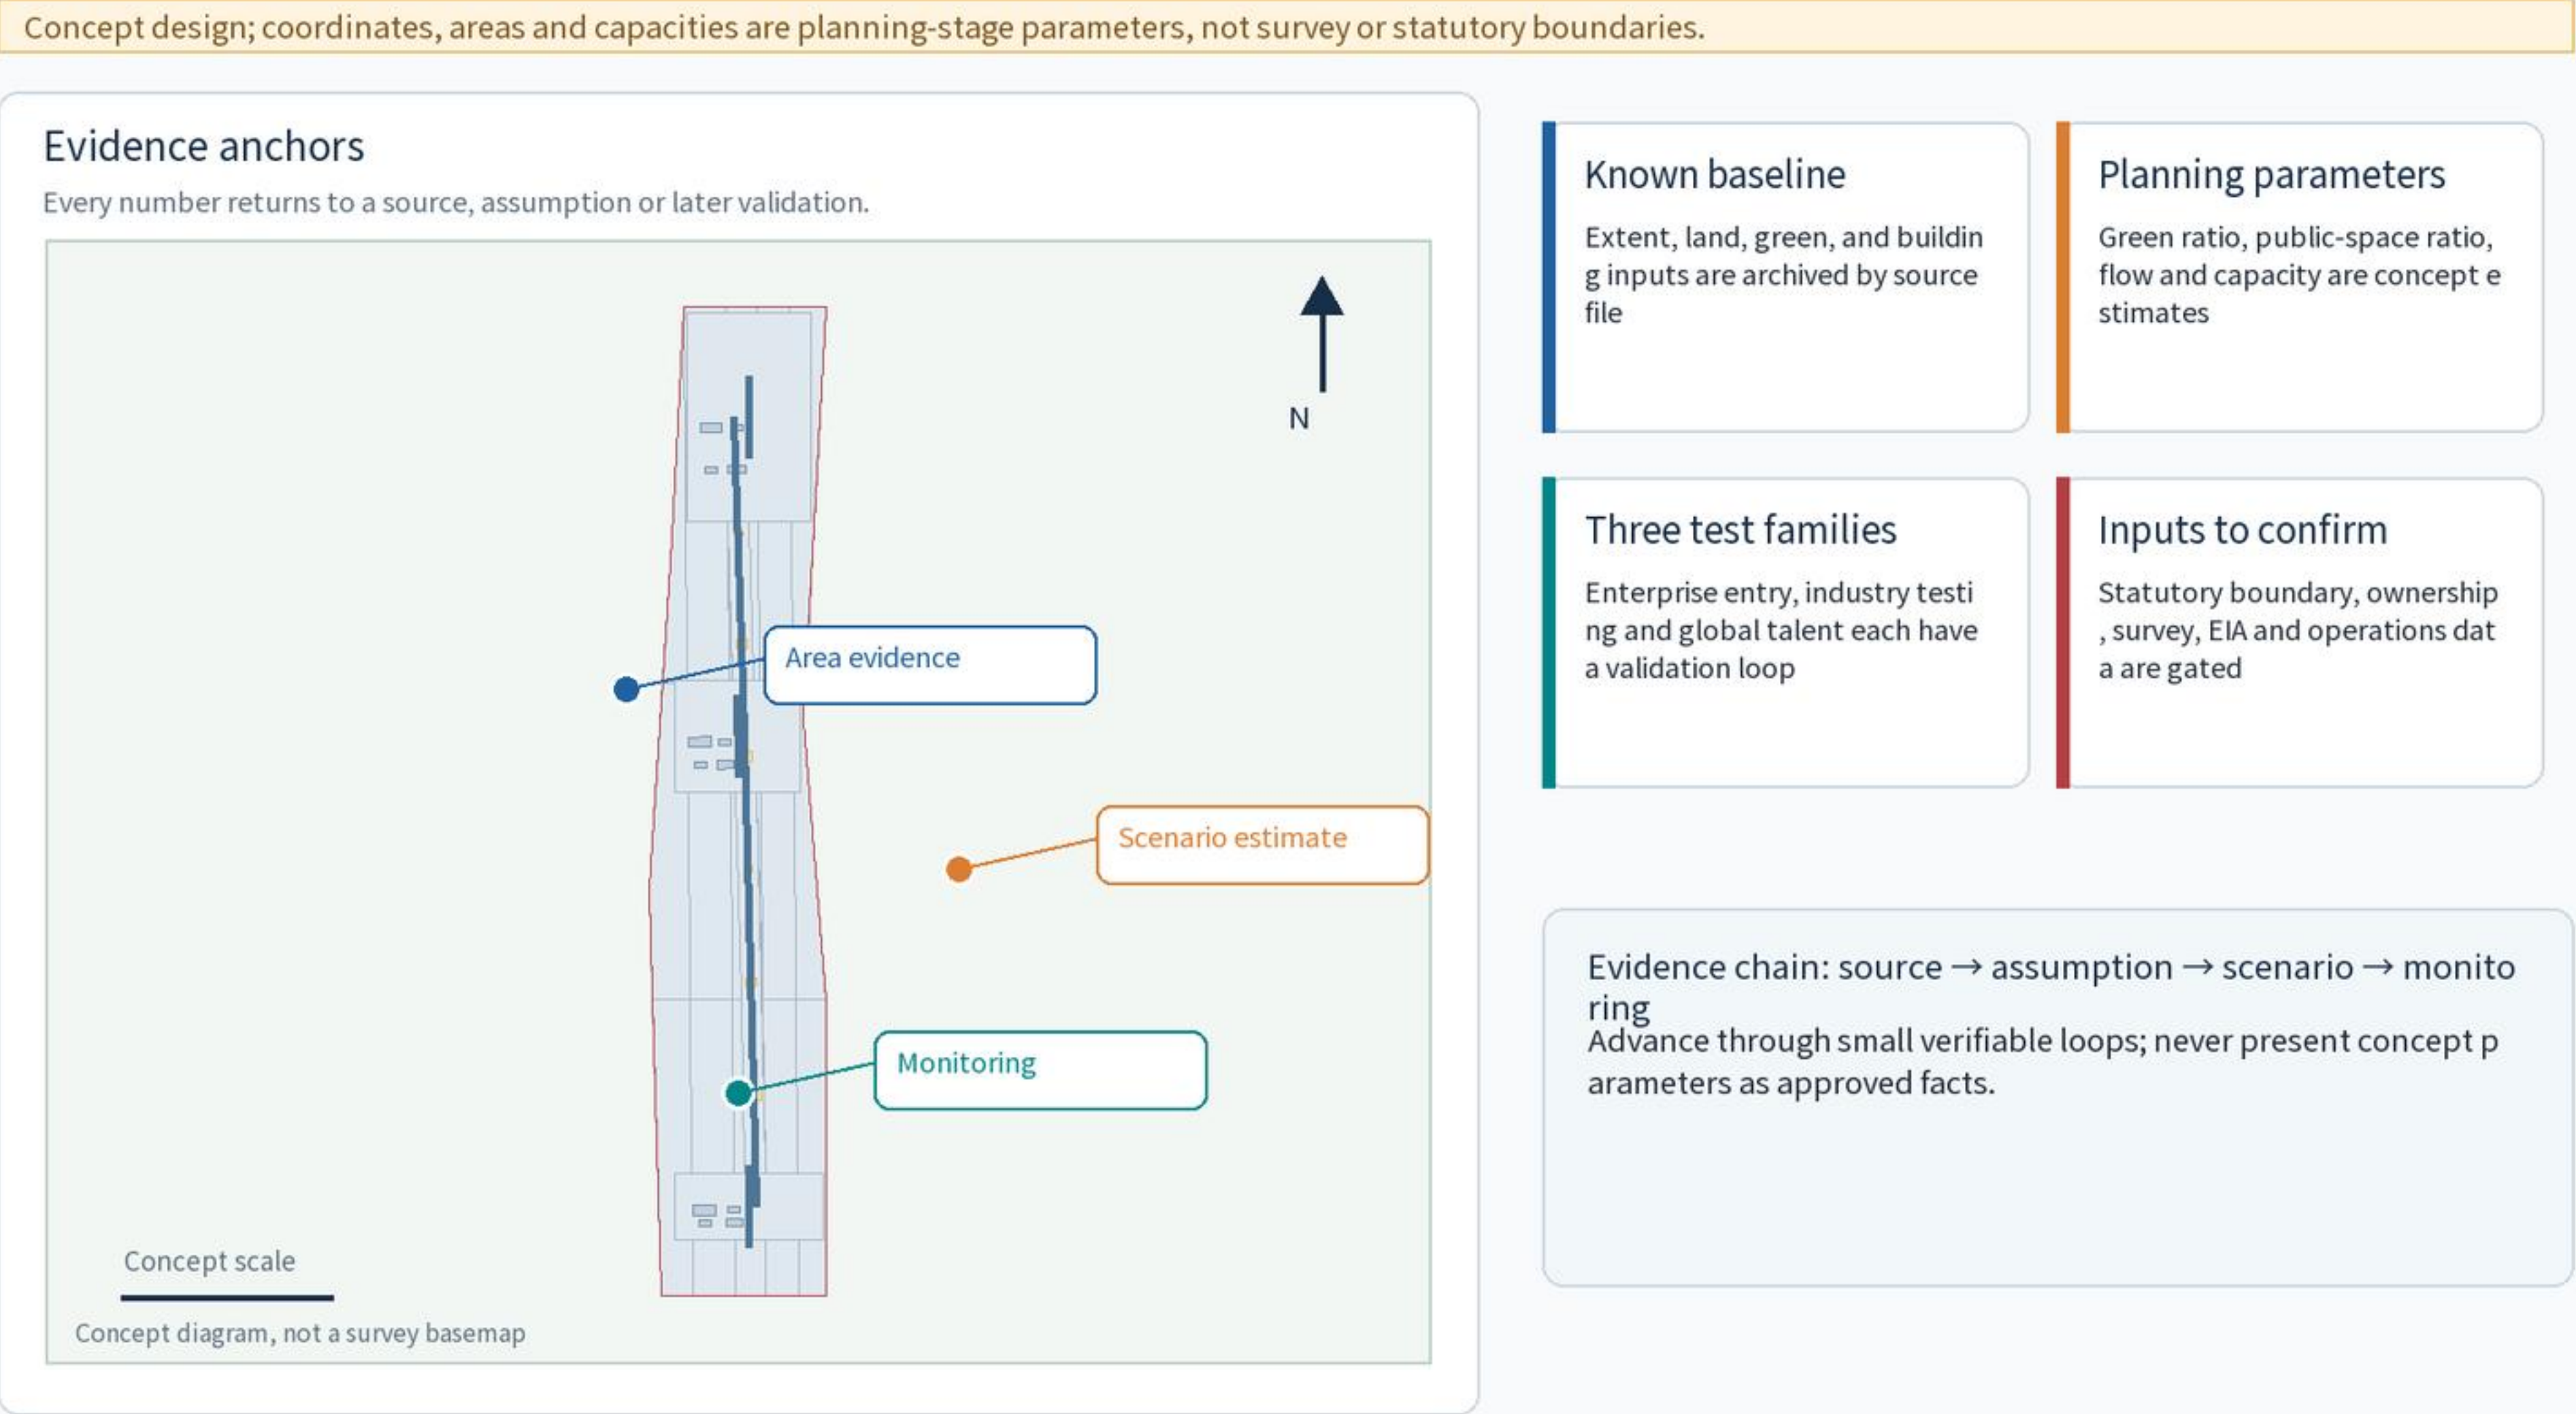

ZhiLink Valley • Zhongguancun Tech Service Wing • concept comparison set

Evidence, scenarios and delivery gates

Connect parameters, scenarios and operations on one board

Metrics and evidence chain

Separate known data, planning parameters and inputs still requiring confirmation.

ZhiLink Valley · Zhongguancun Tech Service Wing · concept comparison set

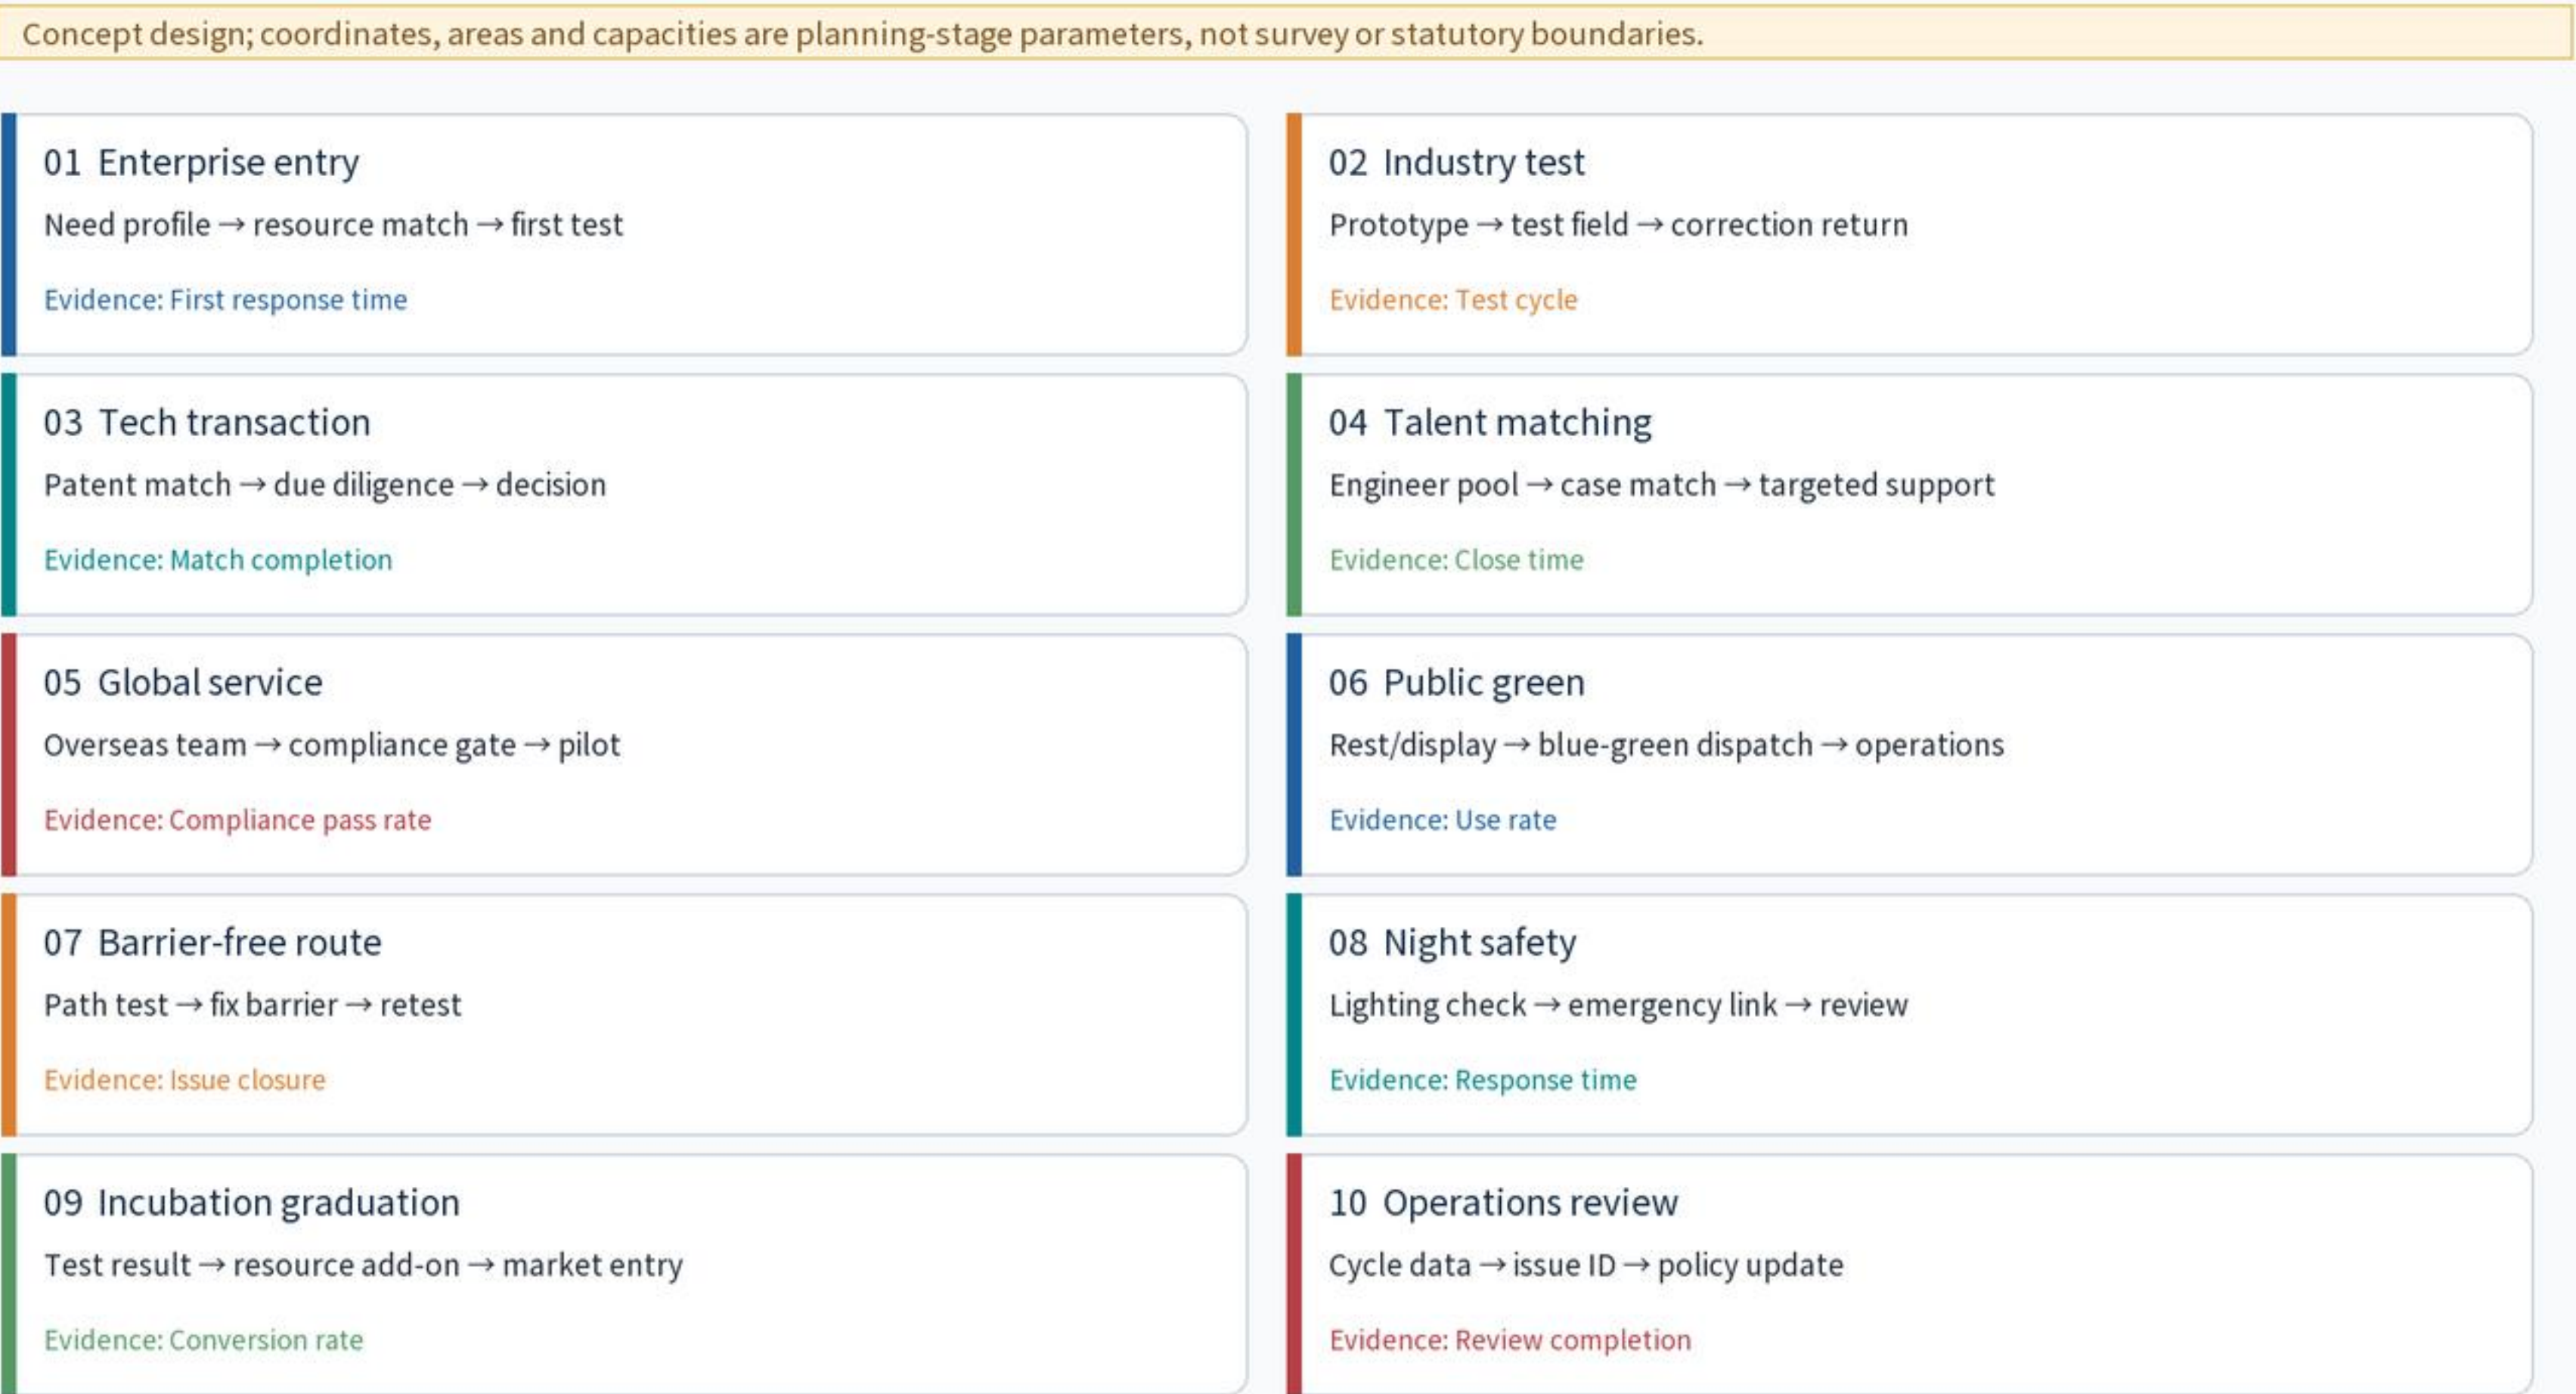

Delivery loop

- Entry: compliance and ownership check
- Test: scenario and data log
- Review: metric change and issue closure
- Switch: safety, access and environmental gates

Evidence rule
Known data and planning parameters are labeled separately; confirm statutory boundary, ownership, survey and operations inputs before entry.

Scenario cards: from chain to validation

Ten executable scenarios; each card names a role, action and evidence.
