

Place-Grown Intelligence

Centennial Jing-zhang Nighttime AI Growth Belt

Overall Aerial View

Clean daytime corridor view without cropping or image mask

Start from site problems, then align the three-level scope, key areas, and AI growth chain.

Top: existing conditions, known problems, resources, and missing official data define the proposal boundary.

Bottom: the public spine links the three key areas and supports the AI growth chain from problem intake to validation, conversion, and feedback.

Support Figure S02 | Existing Resources and Problem Logic v2

From land, resources, mobility, and spatial conditions to a public framework and AI scenario value chain

The site is not short of resources. It lacks an operating interface.

The area already concentrates universities, labs, AI firms, communities, rail access, Jing-Zhang Heritage Park, and the Xiaoyue River. These assets remain scattered and weakly connected. The proposal reorganizes them into a working interface that links real demand, technical capacity, public validation, governance, and operational transformation.

iii Dense resources, weak integration

- 01 Universities, labs, firms, communities, and parks are present, but there is no shared demand gateway, capacity matching, or accountable operating mechanisms
- 02 **Linear potential, insufficient stitching**
The Jing-Zhang corridor and Xiaoyue River provide a linear base, while stations, communities, parks, and enterprise edges still need walkable and service-oriented stitching
- 03 **AI needs real city scenarios, not boundaryless deployment**
Public space testing needs scenario passports, entry review, human takeovers, data boundaries, and exit rules
- 04 **Public value and commercial return are misaligned**
Accessibility, environment, heritage, and community service should not be screened out by single-ROI logic or pure branding demands

Therefore, the proposal is not a new isolated plot or a single exhibition belt

It is a dual system: a public-space framework plus an AI scenario value chain.

The design connects functional zones, public routes, and governance interfaces so shared space can carry testing, iteration, operation, and phased implementation

Land, open space, innovation resources, everyday services, industrial edges, mobility breaks, public corridors, and three key nodes are overlaid on one base

Land, open space, innovation resources, everyday services, industrial edges, mobility breaks, public corridors, and three key nodes are centered on one base.

Heritage Assets Innovation Resources Industrial Resources Living Resources Mobility Resources

Sources: OSM basemap, project ledgers and concept routes. This figure supports analysis only, not statutory planning, approval, engineering, or investment commitment.

12.AA / EXISTING CONDITIONS - PROBLEM LOGIC / 502

Site Overview + Overall Concept v3

Growing AI from macro observation to micro public-space validation, transfer and continuous renewal

Park management scope + merged polygon

One continuous public framework: two river-side slow-life experiences, three difference nodes a

All Origin Community: public scenario validation + commercial feedback loop

12.44 / 14TH EDITION / 100

Translate the concept into walking, blue-green space, public framework, functions, and key-area links.

Top: how people arrive, walk, pause, and use blue-green public space for AI scenario validation on.

Bottom: how five functional systems, three key areas, the river-park validation band, and Zhongguancun services form the spatial framework.

04 | Key Areas And Crowd Intelligence Garden

First summarize the three key-area roles, then expand the technology validation and governance-access node.

Page Logic

Top: Crowd Intelligence Garden, AI Origin Community, and Dazhong Temple take different responsibilities in one chain.

Bottom: Crowd Intelligence Garden is a reliability node for R&D, controlled testing, public observation, governance review, and maintenance.

06 | Twelve AI Scenario Validation Views

From problem intake and public services to cultural co-creation, industry testing, and long-term operation.

Topic S02 | Personas + Scenario Positioning v1

Six key statistical personas define renovation tasks, spatial entrances, chair cards and human-operation boundaries.

Six Personas, Not Population Labels

Each persona answers: demands, why they exist, AI role, human response and failure boundary.

P-01

Nearby Daily Residents

Role

Daily life, public services and facility feedback.

Links

SC-01 / SC-04 / SC-05 / SC-02

Space

AI Origin Community + Xiaoyue River + public space

Boundaries

assumptions only; not personal data profiling.

P-02

Commuting / Cycling Youth

Role

Continuous walking, night safety and station arrival.

Links

SC-01 / SC-04 / SC-09

Space

Transit corridor + Crownd Garden + Daxiang Temple

Boundaries

assumptions only; not personal data profiling.

P-03

University / Open Co-Creators

Role

Real problems, live-test prototypes and controlled testing.

Links

SC-02 / SC-07 / SC-08

Space

AI Origin Community + Crownd Intelligence Garden

Boundaries

assumptions only; not personal data profiling.

P-04

Cultural Slow-Travel Public Users

Role

Jing-Zhang memory, Xiaoyue River context and rights memory.

Links

SC-05 / SC-11

Space

River park heritage line + Daxiang Temple

Boundaries

assumptions only; not personal data profiling.

P-05

AI Enterprise Product Validators

Role

Technical review, limited validation and production.

Space

Full operations platform + service entrances

Boundaries

assumptions only; not personal data profiling.

Scenario - Space - Operation Positioning

Scenario chain and spatial response are positioned twice: by spatial place and by action path.

	AI Origin Community SC-01	Crownd Garden SC-02	Xiaoyue River + Heritage Park SC-05	Daxiang Temple SC-09	Full Operation Platform SC-10
P-01 Nearby Daily Residents	SC-01,12		SC-04,06		Feedback
P-02 Commuting / Cycling Youth			SC-04,06	SC-09	help
P-03 Co-Creators	SC-02	SC-07,08			passport
P-04 Cultural Public Users			SC-03	SC-11	rights
P-05 Enterprise Validators		SC-07,08	0134	SC-09,10,11	audit
P-06 Operator's + Human Takeover	SC-01,12	SC-06	SC-06	SC-10	owner

Formal Expression Boundary

- This is an operation-index and route diagram, not a policy boundary or face-recognition boundary.
- Xiaoyue River is not closed by IP or enclosure; its inner belt remains open and co-built.
- Personas only constrain AI-side permissions and data minimization; no unauthorized manual profiling.
- Enterprise testing and system validation represent staged ecosystem cooperation, not the whole AI growth system.

Note: Profiles are derived from route stories and user-position assumptions; not on-site visitor statistics or personal privacy data.

Technical indicators test whether the system is credible; the economic loop tests whether it can operate over time. Every figure keeps its source, status, and recalculation boundary.

Technical & Investment Indicators

Deliverable Board 01

Place-Grown Intelligence
Centennial Jing-Zhang Urban AI Growth System

Overall Design Area

11.4 km²

Official text basis; final boundary to be reviewed

Key Area Total

368.4 ha

Zhongzhiyuan, AI Origin Community, Dazhongsi

Concept Route Coverage

~51.9 km

Mobility, walking, river-park and stitch routes

First-Wave AI Scenarios

12

Including 4 industry validation scenarios

1. Technical Indicators

A spatial framework, measurable scenarios, technical admission and operational review

Spatial Nodes

3 nodes: Zhongzhiyuan / AI Origin / Dazhongsi

Mobility Framework

2 north-south systems:
rapid connection + continuous walk

Public Scenario Belts

Xiaoyue River eco-health +
Jing-Zhang heritage exchange

East-West Stitches

5 cross links, approx. 9.3 km

Service Points

Dazhongsi: 2 required + 1 conditional
mobile AI service points

Scenario Validation

12 first-wave AI scenarios,
including 4 industry pilots

Technical Admission

100% scene passport coverage
for first-wave scenarios

Public Safeguard

100% human takeover + offline access
for public AI scenes

Governance O&M

Data minimization, third-party testing,
annual review

Exit Mechanism

Pause or exit low-value, high-risk,
or low-acceptance scenarios

2. Investment Indicators

Four ledgers separate committed scope, annual operation, enterprise input and conditional works

One-Time Project Investment

RMB 117-405M

Annual Operations

RMB 35-125M / yr

Four Financial Ledgers

01 One-time investment Public framework, shared nodes, AI base, pilots and governance start-up

02 Annual operation Human service, platform maintenance, device patrol, events and audit

03 Enterprise input Enterprise R&D, compute, proprietary devices, fit-out and marketing

04 Conditional works Bridges, roads, underground space, utilities and major retrofits

One-Time Investment Breakdown

C1 Studies RMB 5-15M

C2 Mobility RMB 25-70M

C3 Blue-green RMB 12-50M

C4 Node retrofit RMB 25-90M

C5 AI base RMB 30-100M

C6 Pilots RMB 15-60M

C9 Governance RMB 5-20M

Boundary note: concept-stage order-of-magnitude estimate only; not a formal budget, engineering cost, government investment commitment or enterprise investment commitment.

Green space ratio, public space ratio and other area-based indicators shall be recalculated after final boundaries are confirmed. Route length is coverage, not construction length.

01 Technical And Investment Indicators

Commercial AI Revenue & Public AI Return Loop

Deliverable Board 02

Place-Grown Intelligence
Conditional revenue estimate

Commercial AI creates incremental revenue; public AI gains long-term renewal capacity

Start-up Phase, 0-18 months

Revenue RMB 1.25-10M

Return RMB 0.4-2.5M

Network Phase, 18-36 months

Revenue RMB 5-38M / yr

Return RMB 1.5-9M / yr

Steady State, after Year 3

Revenue RMB 15-120M / yr

Return RMB 5-30M / yr

1. Spatial Loop: Problem Intake - Technical Validation - Public Testing - Product Conversion - Public Renewal

Only qualified incremental revenue from public scenarios, shared facilities, platform services, public brand and governance testing enters the return base

AI Origin Community

Real urban issues
Co-creation and user tests

Zhongzhiyuan

Technical evaluation
Compliance and certification

River + Heritage Park

Bounded public-space tests
Scenario access and events

Dazhongsi

Subscription and licensing
Procurement and service fees

Public AI Renewal Account

Terminals, accessibility, human service, devices, data governance,
third-party audit and scenario renewal

2. Five Commercial AI Revenue Items

Board-level formulas; final ratios and contract accounts must be confirmed during implementation

Scenario Access

Projects × RMB 50-300k

Compliance Testing

Projects × RMB 100-500k

Platform Access

Projects × RMB 50-500k / yr

User Test & Launch

Batches × RMB 100k-1M

Licensing / Procurement

Projects × RMB 100k-3M or 1%-5%

● Return amount is not total revenue; legacy enterprise revenue and unrelated business income are excluded from the return base. ● Conditional estimate only; it does not imply signed contracts, established funds, realized income or fixed return ratios.

Submission wording: commercial AI revenue is a supplementary renewal pool for public AI, working with public investment, annual O&M and social contribution rather than replacing required operations funding.

02 Commercial AI Revenue And Public AI Return Loop

Response To The Official Brief

Responds to the three positions, five functions, three areas and two wings. Agent 2/3/6 tasks, and multimodal presentation requirements. The board explains the industry ecosystem, scenario operations, long-term activities, and conversion mechanism rather than adding an AI label to conventional renewal.

Boundary Statement

All outputs are open co-creation recommendations. They do not replace statutory planning and do not constitute an approved government conclusion. Investment, operation, return flow, spatial renewal, and node carriers remain concept-stage order-of-magnitude estimates or mechanism proposals.

Core Metric Recalculation

site_area_sqm, green_ratio, and public_space_ratio must be recomputed from submitted geometry and match visual/index.html data-values. Provisional geometry must keep sources, formulas, status, and recalculation triggers.

Pre-Submission Gate

After syncing the latest official main branch, rerun render, finalize, self_check, and participant_preflight. A passing self-check is not a selection, approval, or implementation result.
