

01 Overall Structure and Renewal

A green public axis connecting everyday life with an AI future

F01 Overall Concept and Spatial Framework

One axis, three cores, four connections | Greener, comfortable, liveable and resilient

Provisional design model | Not an official redline, key-area boundary or engineering decision | 2026-08-31

JING-ZHANG / 2026

AI X GREEN LIFE

1 + 3 + 4

Jing-Zhang as an open but controlled public interface

01 Spatial connection

Continuous walking, accessibility, rail transfer and graded east-west interfaces

02 Innovation-chain connection

Learning, research, incubation, testing, adoption, industrialization and feedback

03 Everyday-life connection

Commuting, all-age activity, climate comfort, night and weekend services

04 Resilience connection

Shelter, supplies, people, mobility and professional emergency coordination

The cultural lead is Zhan Tianyou's spirit; rail is the carrier. Students engage through frontier projects, talks and first-hand feedback.

AI binding: spatial carrier + AI service + accountable operator. Humans decide high-risk matters.

Verified continuity

Field audit pending

F02 Land Use & Renewal Summary

Protection and repair first

Focus: continuous active travel, accessibility, ecology and basic services.
Action: repair gaps, interfaces and everyday access.
Boundary: AI assists alerts and matching; it does not replace public essentials.

Adaptive reuse of existing space

Target: underperforming buildings, active ground floors and support space.
Action: adapt first, adding open interfaces and flexible services.
Responsibility: coordinate tenure, fire safety, utilities and operators.

Conditional construction

Trigger: demand, tenure, structure, fire safety, utilities and operators are verified.
Decision: discuss new construction only after those checks.
Boundary: accountable actors retain approvals, critical services and stop authority.

Pre-delivery checks

Need Users, timing and service volume	Tenure Available space and permissions
Safety Structure, fire safety and accessibility	Utilities Capacity, connection and maintenance
Operations Named daily steward and maintainer	Accountability Approval, critical service and stop authority

JING-ZHANG / 2026

AI × GREEN LIFE

RESPONSIBLE OPERATOR

Licensed operators monitor, take over, stop and provide alternatives

RESPONSIBLE OPERATOR

Emergency authority leads; communities, sites and mobility operators coordinate

HIGH-RISK TASKS: HUMAN DECISION, AUTHORIZATION, TAKEOVER AND ACCOUNTABILITY

Provisional design model | Not an official redline, key-area boundary or engineering decision | 2026-08-31

Walking, cycling, accessibility, metro and ordinary transit come first. Six road intersections are audit points, not presumed barriers.
