

# Spatial Index: Three Areas and Three Concept Relays

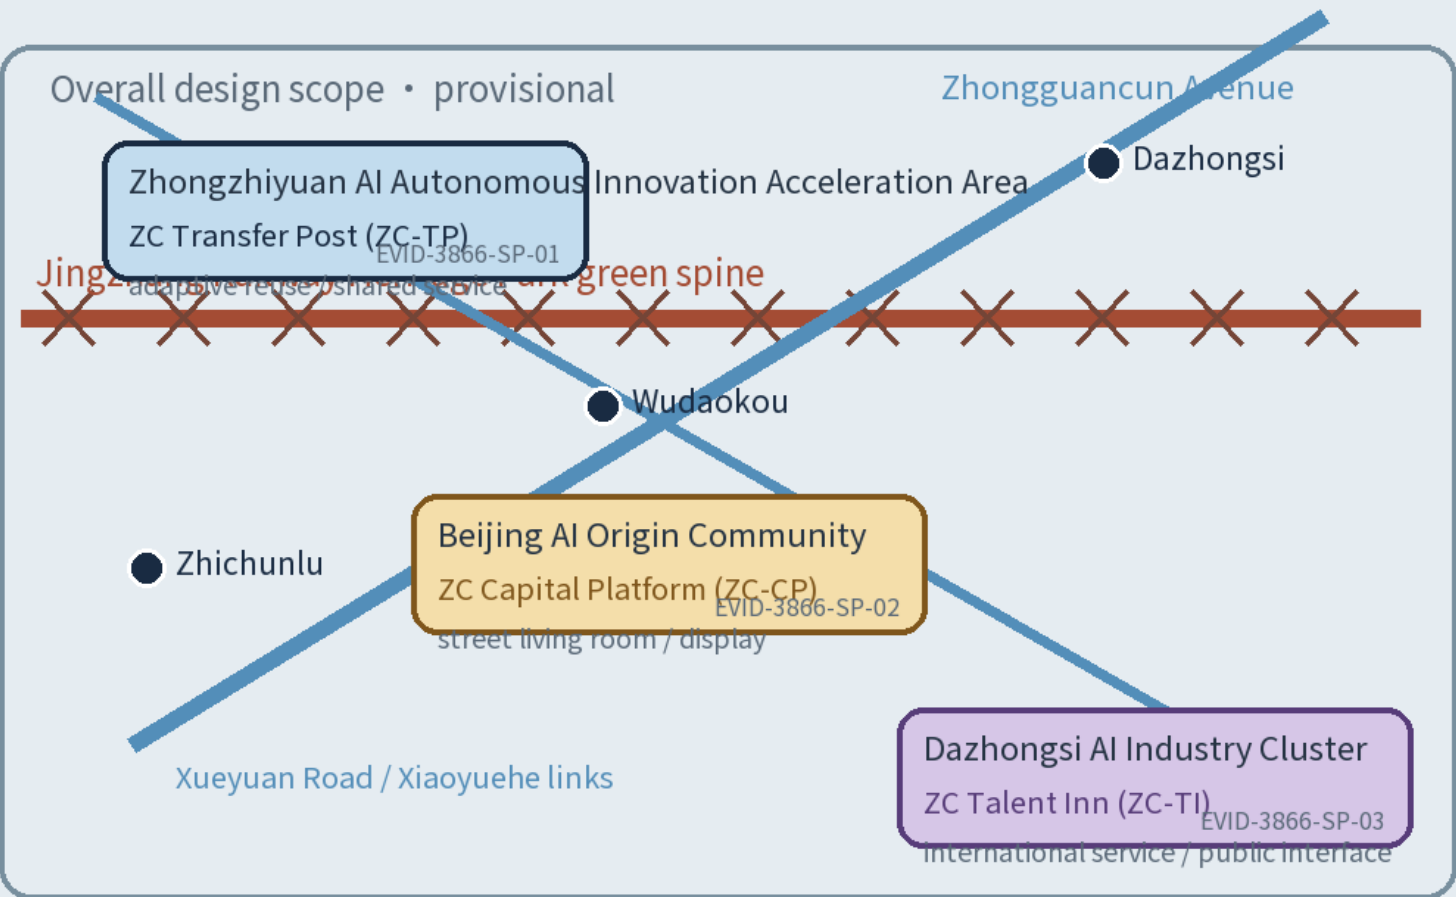

Road, rail and station context is orientation only; all siting is conceptual.

## Spatial Index • Three Key Areas & Three Concept Relays

Provisional geometry • road / rail / station orientation • space types • evidence IDs

PROVISIONAL • NOT AN OFFICIAL REDLINE • RECOMPUTE AFTER OFFICIAL DATA

### ORIENTATION MAP

### Crosswalk

Area → relay → space type

Zhongzhiyuan

ZC-TP

adaptive reuse

EVID-3866-SP-01

AI Origin Community

ZC-CP

street living room

EVID-3866-SP-02

Dazhongsi

ZC-TI

international service

EVID-3866-SP-03

Concept map only. Locations are not official siting; roads, rail and stations are orientation context. Replace geometry after organizer data.

# Overall Design Overview

PROVISIONAL • recompute after official data

Provisional geometry and official text-caliber scope; recompute after official data.

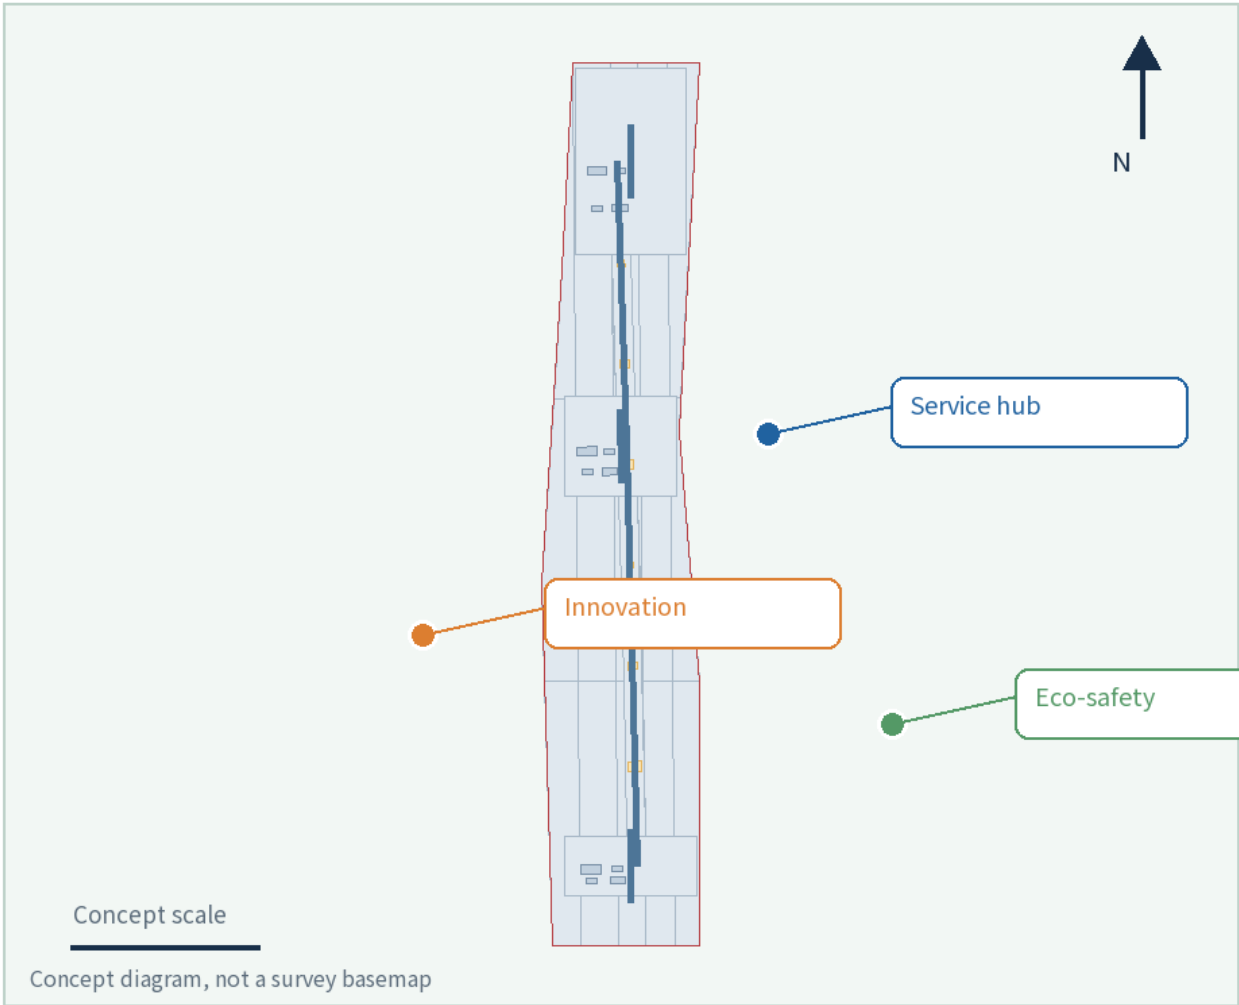

## ZhiLink Valley • Element Link Belt

Zhongguancun Tech Service Wing: connect technology, capital, scenarios and talent through a testable service chain.

Concept design; coordinates, areas and capacities are planning-stage parameters, not survey or statutory boundaries.

### System overview

Three relay spaces and five service functions.

### Three relay spaces

Enterprise Accelerator • Industry Test Field • Global Service I nn

### Five functions

Incubation, testing, exchange, talent and public green space

### Three gates

Entry, transaction and operations gates control delivery risk

### Scope and evidence

Scope boundary note  
The red outline is a concept extent only; confirm controls, ow  
nership and survey data before delivery.

# Key Areas and Node Grammar

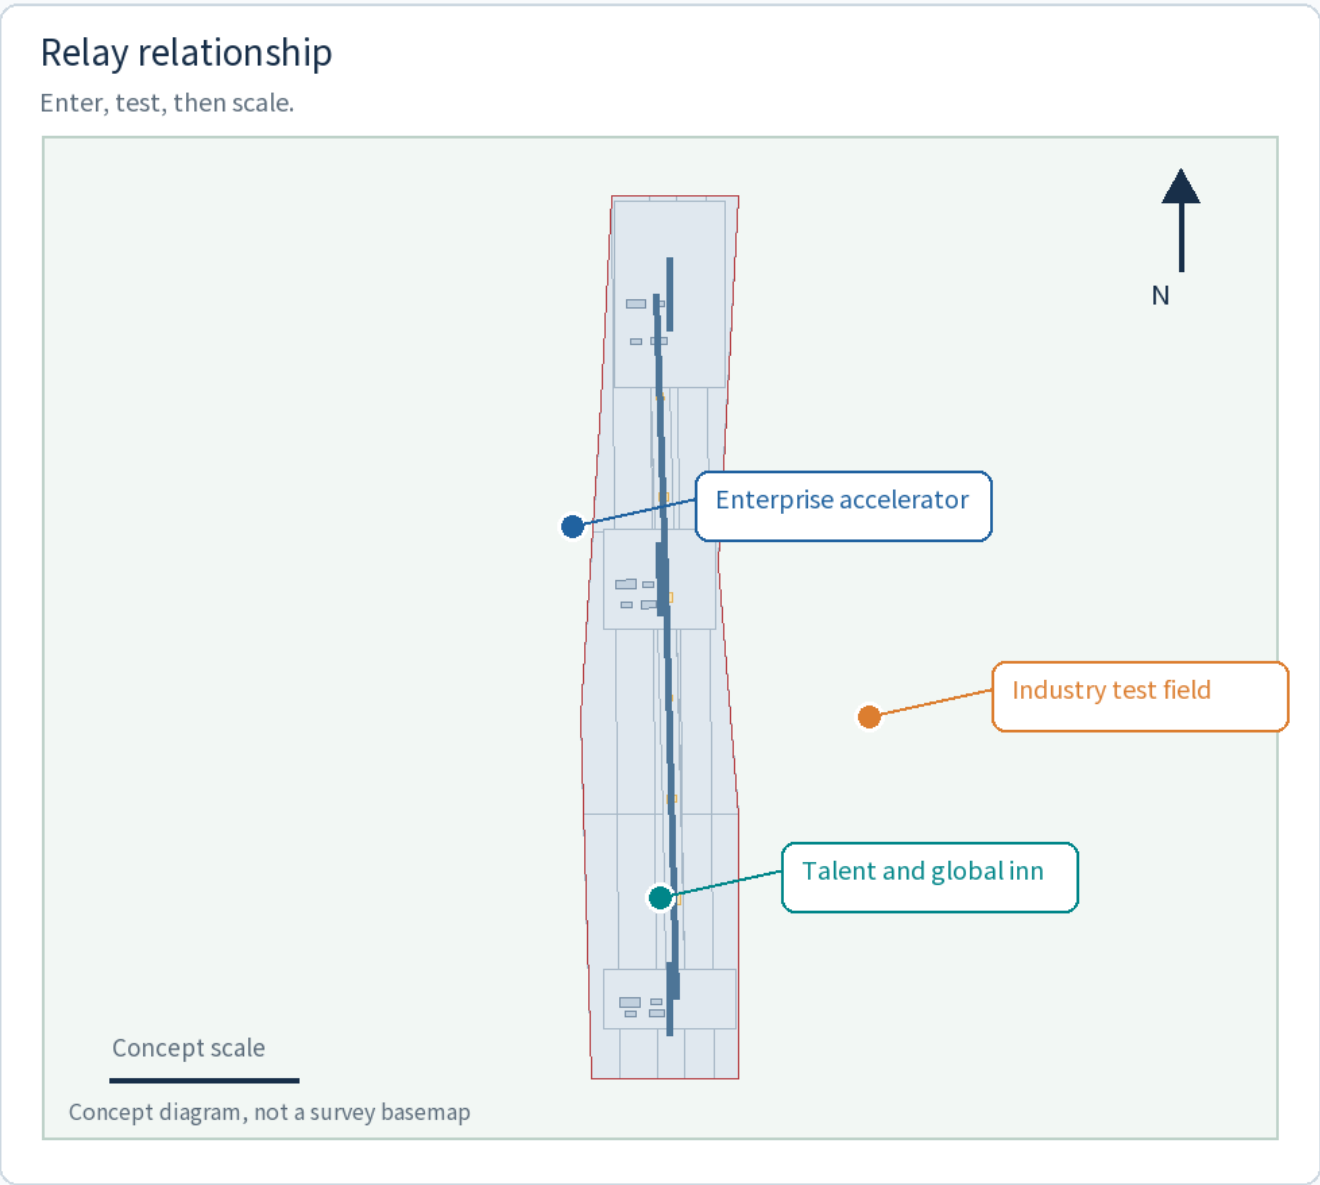

PROVISIONAL • recompute after official data

ZC-TP / ZC-CP / ZC-TI are fixed internal concept labels, not official siting.

## Three relay spaces: from entry to global service

Each relay has one mission, one test scenario and one evidence trail.

Concept design; coordinates, areas and capacities are planning-stage parameters, not survey or statutory boundaries.

### Enterprise Accelerator

Entry gate: identify needs, match resources and run a first test.  
Metric: first response / completed entry

### Industry Test Field

Middle gate: connect technology to a real operating scenario.  
Metric: test cycle / correction return rate

### Talent and Global Service Inn

Scale gate: connect talent, teams and international partners.  
Metric: case close time / repeat use

# Land-Use / Mobility / Blue-Green

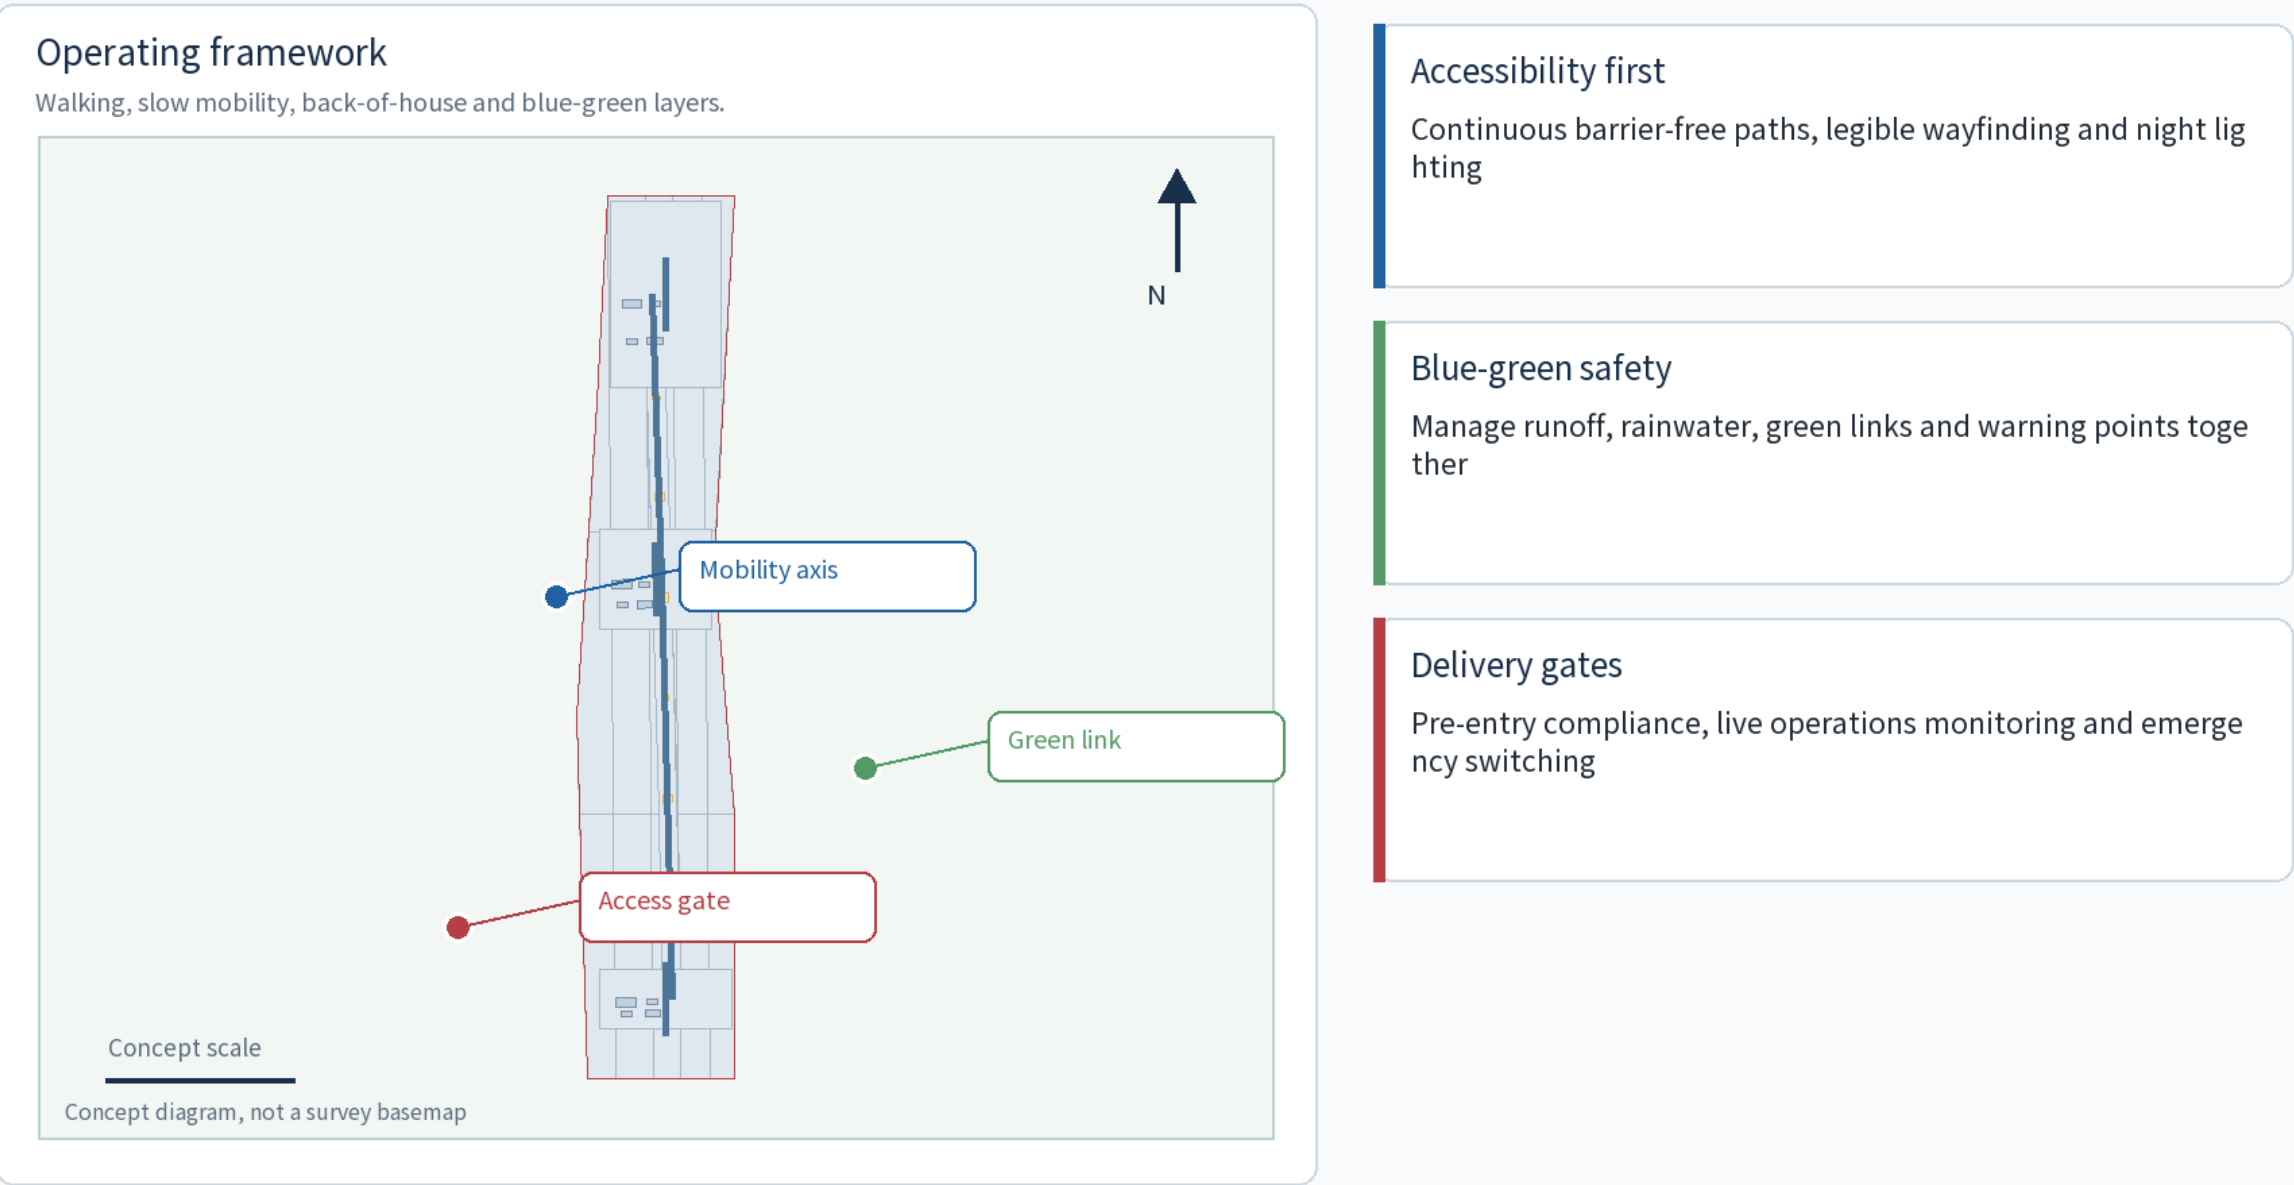

PROVISIONAL - recompute after official data

Land-use and mobility are concept illustrations; no statutory control conclusion.

## Mobility, blue-green systems and safety gates

Manage accessibility and risk control as one operating diagram.

Concept design; coordinates, areas and capacities are planning-stage parameters, not survey or statutory boundaries.

# Core Metrics and AI Scenarios

PROVISIONAL • recompute after official data

Thresholds and metrics are participant-proposed/to\_verify; human gate required.

## Metrics and evidence chain

Separate known data, planning parameters and inputs still requiring confirmation.

Concept design; coordinates, areas and capacities are planning-stage parameters, not survey or statutory boundaries.
