

01 Overall Structure and Renewal

A green public axis connecting everyday life with an AI future

F01 Overall Concept and Spatial Framework

JING-ZHANG 2026
PROVISIONAL MODEL

One green axis, three cores, four connections | Daily life first | AI as coordination layer

Coordinated study 43.6 sq km

- 01 Spatial connection
Walking, rail, east-west access and accessibility
- 02 Innovation-chain connection
Learning, practice, validation, incubation and application
- 03 Everyday-service connection
Commuting, social life, all-age and night services
- 04 Resilience connection
Shelter, supplies, people, mobility and professional response

Provisional design model | Not an official redline or engineering decision | 2026-08-31

F02 Land Use and Renewal Structure

JING-ZHANG 2026
PROVISIONAL MODEL

Three scales | Five spatial actions | Repair first, retrofit second, build only when justified

01 THREE SCALES

02 FIVE SPATIAL ACTIONS

01	Continuous green mobility	Repair verified walking, cycling and accessible gaps
02	East-west interfaces	Improve verified crossings, station access, underpasses and transfer nodes
03	All-age public life	Shade, water, rest, night service and extreme-weather support
04	Adaptive reuse	Reuse underperforming buildings, ground floors and park support space conditionally
05	Professional test logistics	Controlled tests for robots, supplementary shuttles and last-mile logistics

Sequence: basic access and green life → adaptive reuse and shared interfaces → new construction only after demand and tenure are proven

Provisional design model | Not an official redline or engineering decision | 2026-08-31

02 Detailed Design of Three Key Areas

A green public axis connecting everyday life with an AI future

F03 Differentiated Design of Three Key Areas

JING-ZHANG 2026
PROVISIONAL MODEL

One innovation chain | Three urban settings | No copied AI-park formula

Zhongzhiyuan | 192.1 ha

Incubation core

SPATIAL CARRIERS

R&D, shared prototyping, professional validation, logistics and public showcase

DECISION GATE

Verify use, structure, fire safety, logistics and operator first

Beijing AI Origin | 104.3 ha

Talent vitality core

SPATIAL CARRIERS

Campus-city learning interfaces, rotating talks, joint studios and public living rooms

DECISION GATE

Keep managed boundaries; connect through booking and agreements

Dazhongsi | 72.0 ha

Industry cluster core

SPATIAL CARRIERS

Station anchor, Xueyuan South daily-life interface, North Third Ring industry interface and public axis

DECISION GATE

Current provisional polygon is misplaced; use a boundary-independent framework

INNOVATION CHAIN

Frontier learning → project practice → engineering validation → incubation → industry application → community feedback

Provisional design model | Not an official redline or engineering decision | 2026-08-31

F01 Overall Concept and Spatial Framework

JING-ZHANG 2026
PROVISIONAL MODEL

One green axis, three cores, four connections | Daily life first | AI as coordination layer

Overall design about 11.4 sq km

N

Zhongzhiyuan
Incubation core

Beijing AI Origin
Talent vitality core

Dazhongsi
Industry cluster core

Jing-Zhang green public axis

The overall area uses official text and rough provisional geometry. Core locations show functional relationships only; all layers must be recalculated when official polygons arrive.

Coordinated study 43.6 sq km

01 Spatial connection

Walking, rail, east-west access and accessibility

02 Innovation-chain connection

Learning, practice, validation, incubation and application

03 Everyday-service connection

Commuting, social life, all-age and night services

04 Resilience connection

Shelter, supplies, people, mobility and professional response

Provisional design model | Not an official redline or engineering decision | 2026-08-31

03 Mobility, Blue-Green and AI

A green public axis connecting everyday life with an AI future

F04 Mobility, Blue-Green Space and AI Scenarios

JING-ZHANG 2026
PROVISIONAL MODEL

North-south continuity | Six audit crossings | Rail transfer | AI never replaces physical access

Daily life first
Walking, cycling, accessibility, metro and ordinary transit

Audit each point
Crossings, detours, station access, night and severe-weather conditions

Controlled testing
T01 robots, T02 supplementary shuttle, T03 last-mile logistics

Human fallback
Fixed signs, staff, takeover, stop and alternative routes

Audit points do not prove barriers. The North Third Ring gateway supports north-south continuity; it does not prove an east-west crossing of Line 13.

Provisional design model | Not an official redline or engineering decision | 2026-08-31

F03 Differentiated Design of Three Key Areas

JING-ZHANG 2026
PROVISIONAL MODEL

One innovation chain | Three urban settings | No copied AI-park formula

Zhongzhiyuan | 192.1 ha

Incubation core

SPATIAL CARRIERS
R&D, shared prototyping, professional validation, logistics and public showcase

DECISION GATE
Verify use, structure, fire safety, logistics and operator first

Beijing AI Origin | 104.3 ha

Talent vitality core

SPATIAL CARRIERS
Campus-city learning interfaces, rotating talks, joint studios and public living rooms

DECISION GATE
Keep managed boundaries; connect through booking and agreements

Dazhongsi | 72.0 ha

Industry cluster core

SPATIAL CARRIERS
Station anchor, Xueyuan South daily-life interface, North Third Ring industry interface and public axis

DECISION GATE
Current provisional polygon is misplaced; use a boundary-independent framework

INNOVATION CHAIN
Frontier learning → project practice → engineering validation → incubation → industry application → community feedback

Provisional design model | Not an official redline or engineering decision | 2026-08-31

04 Metrics, Tasks and Risks

A green public axis connecting everyday life with an AI future

F05 Metrics, Seven Requests and Evidence Chain

JING-ZHANG 2026
PROVISIONAL MODEL

Official textual scale separated from provisional model | Every key metric is traceable and reproducible

Official textual scale

Coordinated study

43.6 sq km

Overall design

about 11.4 sq km

Three key areas

192.1 + 104.3 + 72.0 ha

Provisional design model

Model site area

11,412,825 sq m

Model green ratio

12.3423%

Model public-space ratio

7.3281%

SEVEN REQUESTS

R1 Haidian-fit concept

R2 AI innovation ecosystem

R3 New urban form

R4 Mobility, services and infrastructure

R5 Jing-Zhang park vitality

R6 Three-culture narrative

R7 AI application scenarios

Recalculation triggers: official boundaries, regulatory plan, tenure, road redlines, municipal infrastructure and heritage controls.

Provisional design model | Not an official redline or engineering decision | 2026-08-31

F02 Land Use and Renewal Structure

JING-ZHANG 2026
PROVISIONAL MODEL

Three scales | Five spatial actions | Repair first, retrofit second, build only when justified

01 THREE SCALES

02 FIVE SPATIAL ACTIONS

01	Continuous green mobility	Repair verified walking, cycling and accessible gaps
02	East-west interfaces	Improve verified crossings, station access, underpasses and transfer nodes
03	All-age public life	Shade, water, rest, night service and extreme-weather support
04	Adaptive reuse	Reuse underperforming buildings, ground floors and park support space conditionally
05	Professional test logistics	Controlled tests for robots, supplementary shuttles and last-mile logistics
Sequence: basic access and green life → adaptive reuse and shared interfaces → new construction only after demand and tenure are proven		

Provisional design model | Not an official redline or engineering decision | 2026-08-31
