

JINGZHANG STRATA: placing the Agent inside a real urban-design loop

Not one-click imagery: site evidence, candidate comparison, human judgment, and reversible delivery form one accountable chain.

PROVISIONAL / HUMAN GATE / HumanDecision PENDING

A CENTENNIAL BASE. A CITY RE-LAYERED.

JINGZHANG STRATA / CIVIC INTELLIGENCE INFRASTRUCTURE

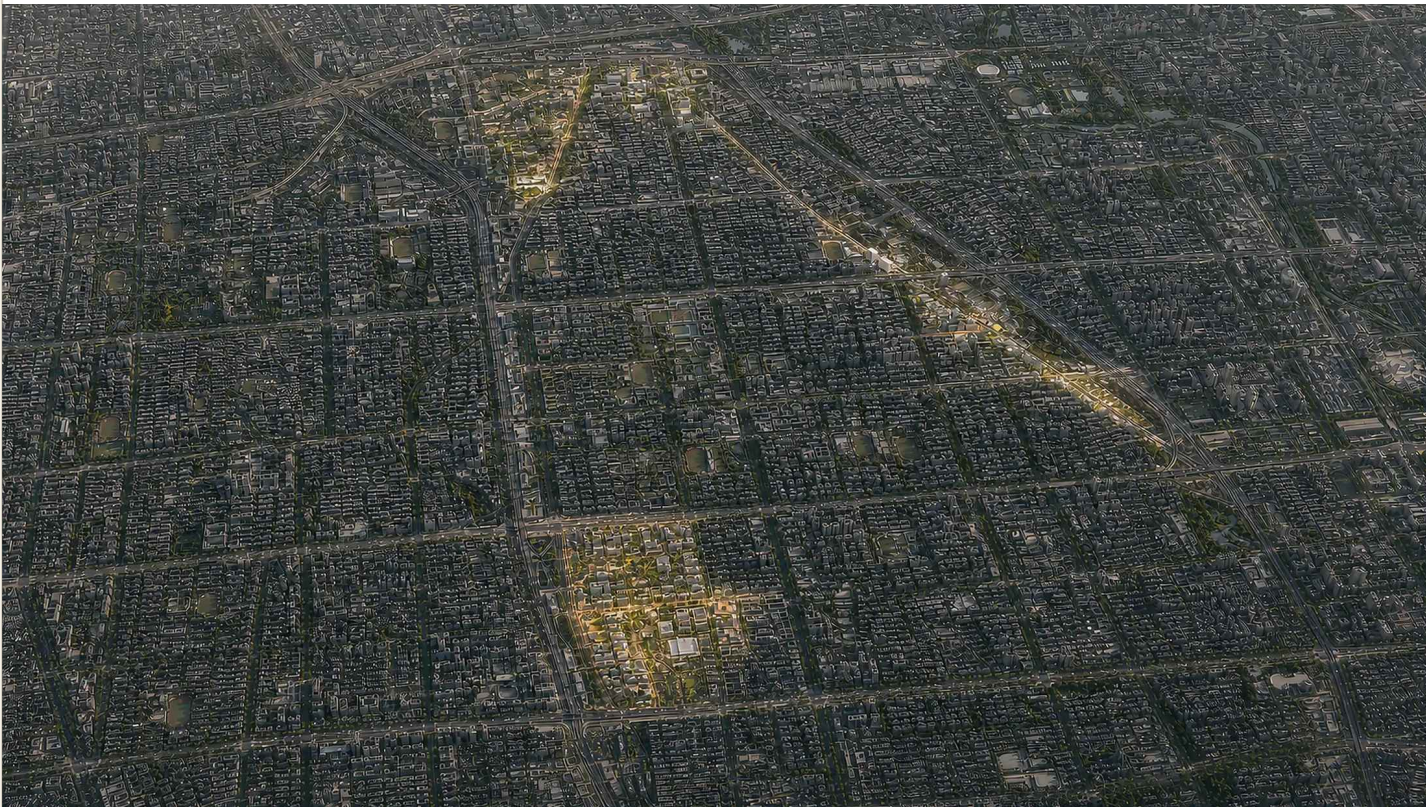

One base preserves railway heritage and public life; three fields calibrate, translate, and enable adoption; two wings import service and blue-green capability; twelve prototypes remain pausable, replaceable, and withdrawable.

THE COMPETITIVE PROPOSITION

AI does not replace planners or approvers. It exposes unknowns, makes alternatives comparable, and binds each spatial intervention to evidence, responsibility, stop controls, and rollback.

PROVISIONAL GEOMETRY / HUMAN DECISION REQUIRED

AI CONCEPT VISUAL / NOT SITE EVIDENCE

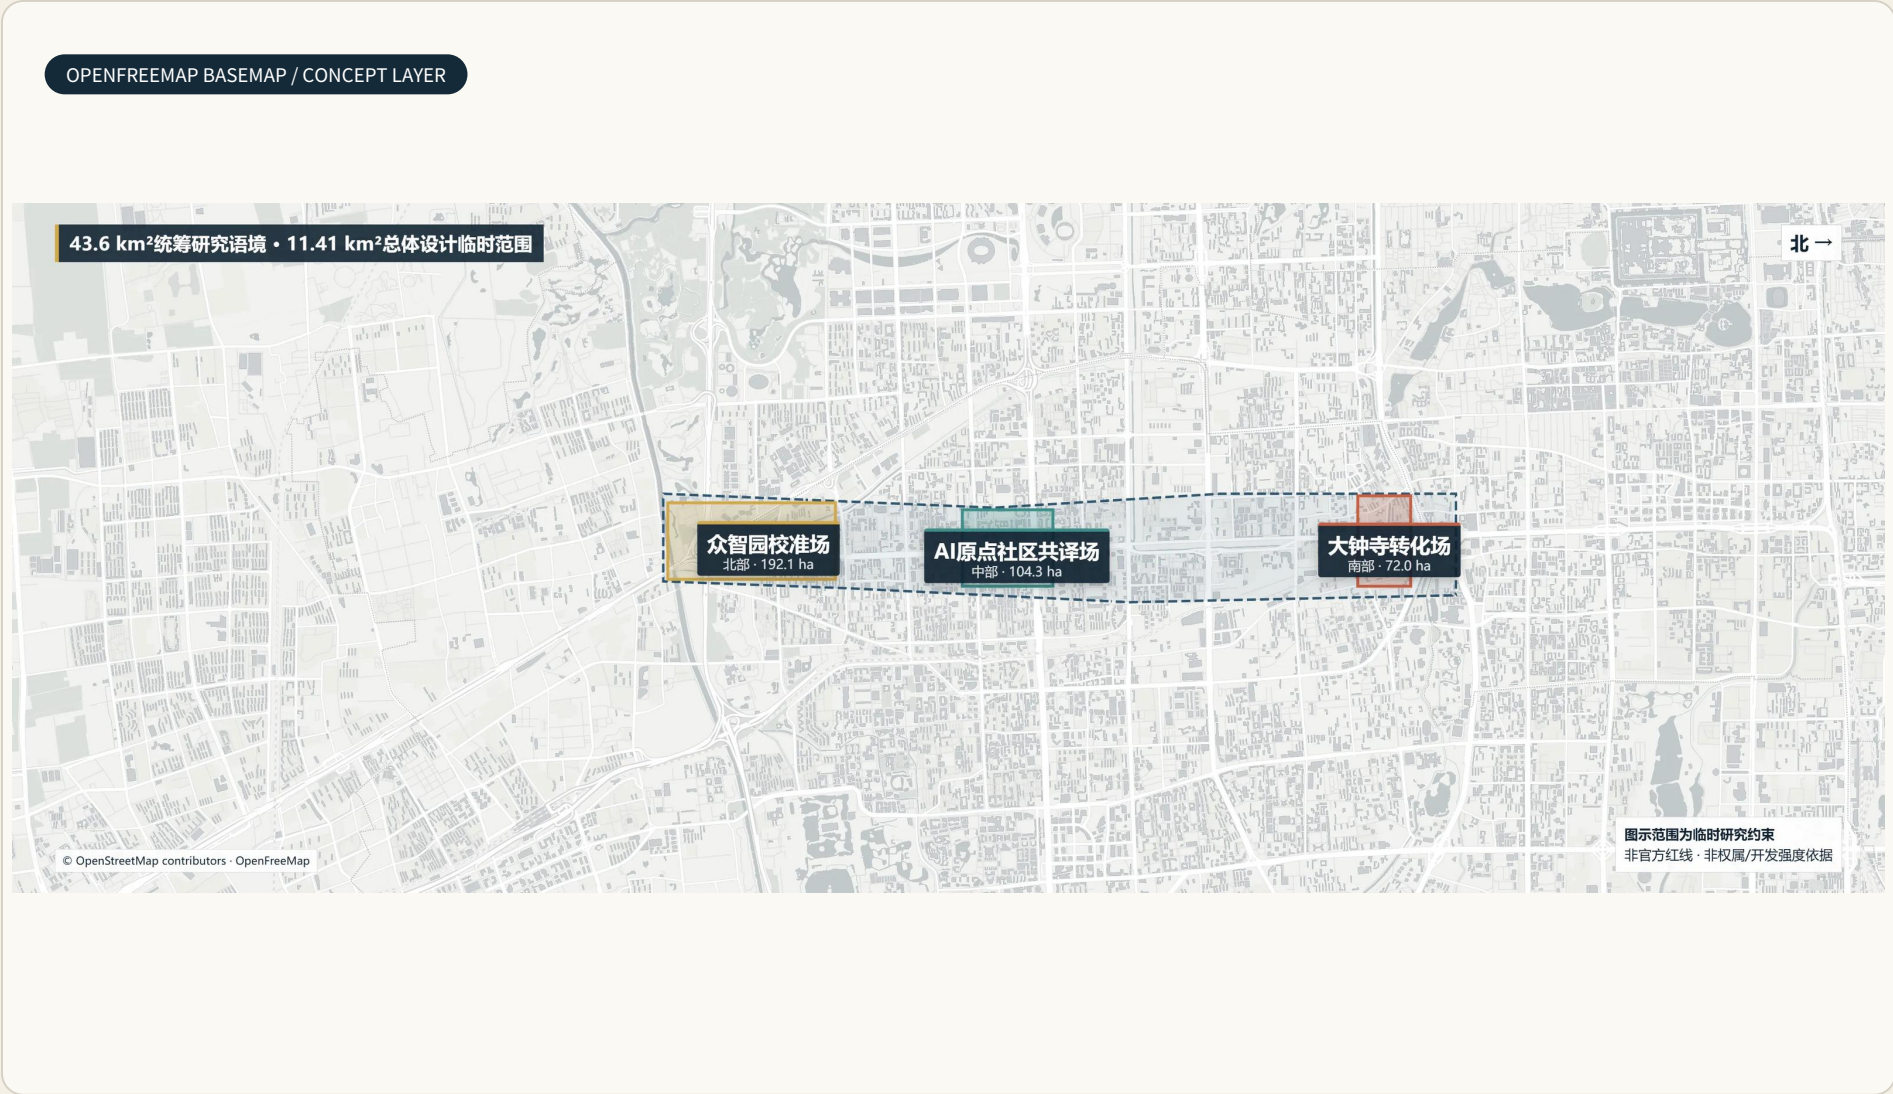

Imagegen concept aerial; preserves broad existing grain and predominantly low/mid-rise logic, but is not survey, site evidence, or an official rendering.

Four design depths: from 43.6 km² strategy to three representative nodes

One design logic performs different jobs at each scale, avoiding the mistake of treating nodes as the whole city.

PROVISIONAL / HUMAN GATE / HumanDecision PENDING

OpenFreeMap public basemap with concept overlays; © OpenStreetMap contributors · OpenFreeMap. The three fields denote separated design roles, not statutory boundaries, parcels, or construction limits.

01
c.43.6 km² coordination study
Strategic relations, innovation ecology, regional coordination; no unpublished polygon.

02
c.11.41 km² overall design
Base-fields-wings, functions, public realm, mobility, and phasing.

03
c.368.4 ha focus-area design
North/central/south each include plan, section, eye-level, and aerial views.

04
3 representative nodes
S01 calibration, S05 accessible translation, S03 terminal-usability adoption.

Existing-condition diagnosis: identify breaks before defining the Agent's role

Site judgments come from public evidence, provisional geometry, and traceable layers; generative imagery does not fill unknowns.

PROVISIONAL / HUMAN GATE / HumanDecision PENDING

Heritage continuity / interface breaks

Keep the linear heritage legible while stitching accessible east-west links to blocks, campuses, and stations.

Complex existing fabric

Prioritize retention, repair, and adaptive reuse; new massing follows existing grain and professional verification.

Transport, tenure, heritage gaps

Until official road, utility, tenure, and heritage inputs arrive, only relationships for verification are shown.

Trust and equity risks in smart services

Without authorization, human-equivalent access, or a named accountable owner, the Agent pauses by default.

Sentinel-2 L2A 10 m TCI is broad context only; Contains modified Copernicus Sentinel data 2026. Esri/Vantor high-resolution basemap remains internal-only and is excluded from the public package.

Overall structure: one base, three fields, two wings turn a corridor into a city network

The structure does not stack nodes along a line; it links metropolitan innovation, district public life, and the heritage substrate in both directions.

PROVISIONAL / HUMAN GATE / HumanDecision PENDING

VERSION BASE

Railway heritage, public realm, and existing grain form a version base that AI cannot silently overwrite.

RELAY FIELDS

North calibrates, central translates, south tests adoption: evidence quality, public understanding, and feedback.

SUPPORT WINGS

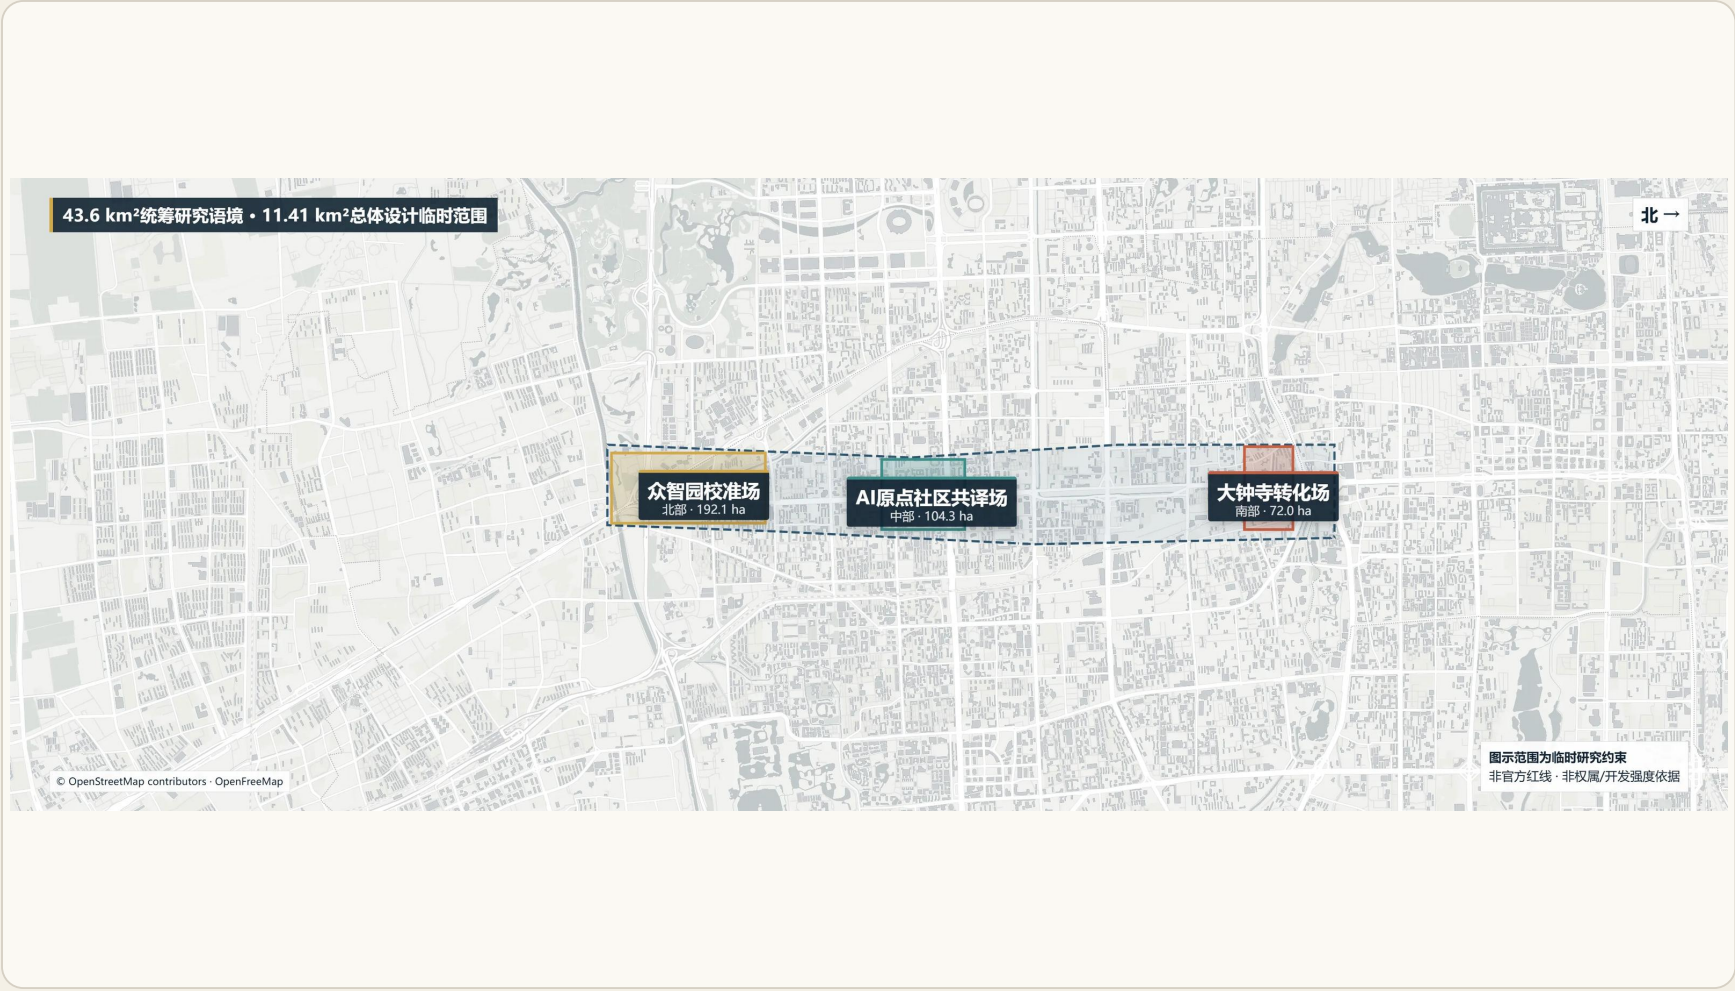

Technology services and blue-green scenarios provide standards, legal, talent, maintenance, and feedback without new statutory limits.

Function and massing are concept controls: a continuous low/mid-rise base with controlled intensification only where hub and urban-interface conditions support it; no invented supertall district.

11.41 km² overall urban design: retain grain, stitch interfaces, build a loop

The masterplan controls relationships and actions; authoritative polygons trigger same-source re-clipping, recomputation, and redrawing.

PROVISIONAL / HUMAN GATE / HumanDecision PENDING

SPATIAL ACTION

Retain the primary network and most urban fabric; add public interfaces along the heritage line and concentrate pilots in three focus areas rather than wholesale redevelopment.

RETAIN

Retain heritage, mature neighborhoods, campuses, and serviceable buildings.

STITCH

Stitch breaks with walking, cycling, transit interchange, and accessible interfaces.

ADAPT

Adapt underused fabric for public services and innovation collaboration.

TEST

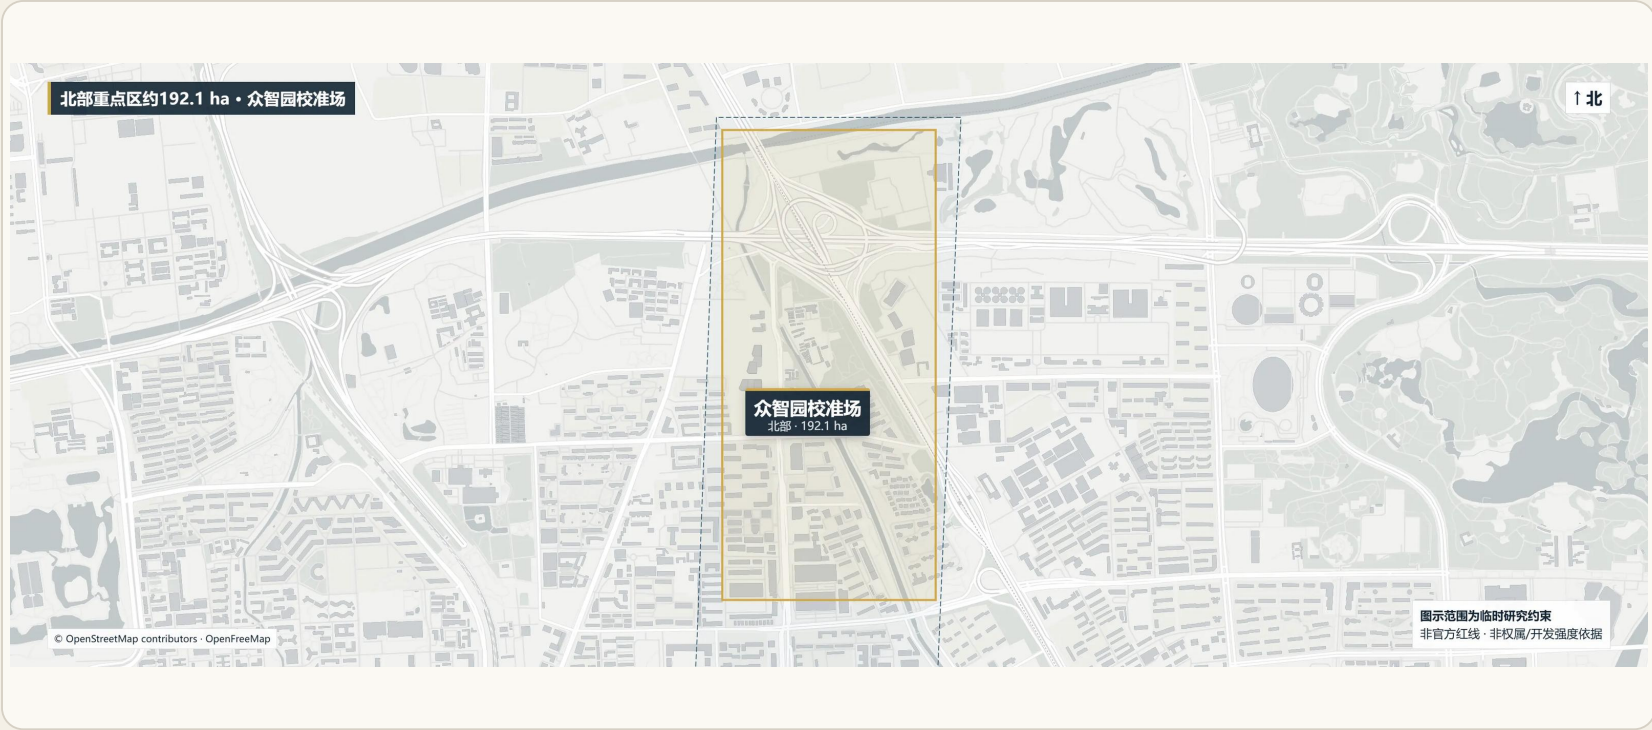

Start new interventions as movable, reversible, low-impact prototypes; scale or exit through feedback.

Left: OpenFreeMap public basemap with concept overlays (© OpenStreetMap contributors · OpenFreeMap); right: Imagegen concept aerial. Both follow broad existing grain, not one-to-one building reconstruction and not a substitute for survey, site verification, or official design.

North / Zhongzhiyuan: low-impact insertion of a calibration field

Retain campus and neighborhood grain; use demountable co-location rigs, pocket plazas, walking loops, and shared courtyards for S01 calibration and S02 drift red-teaming.

PROVISIONAL / HUMAN GATE / HumanDecision PENDING

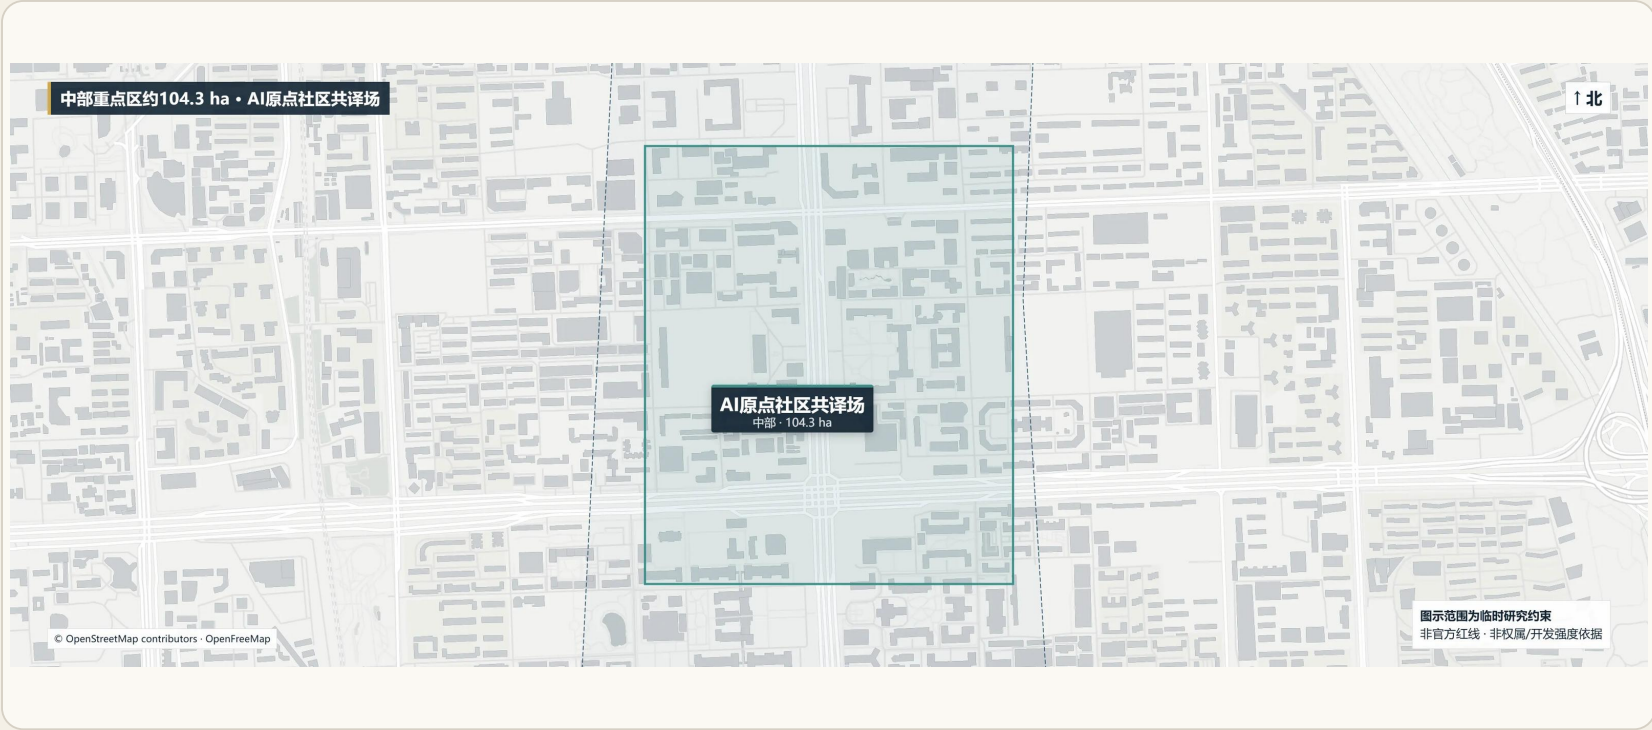

Retain first, then calibrate; no tower district.

Top-left: OpenFreeMap public basemap with concept overlays (© OpenStreetMap contributors • OpenFreeMap); sections, aerials, and eye-level views are Imagegen concept expressions informed by site type, not one-to-one reconstruction.

Central / AI Origin Community: translate model output into daily civic service

Connect campus, community, and public realm through open ground floors, translation galleries, human-switchable service desks, and accessible active-mobility routes, centered on S05.

PROVISIONAL / HUMAN GATE / HumanDecision PENDING

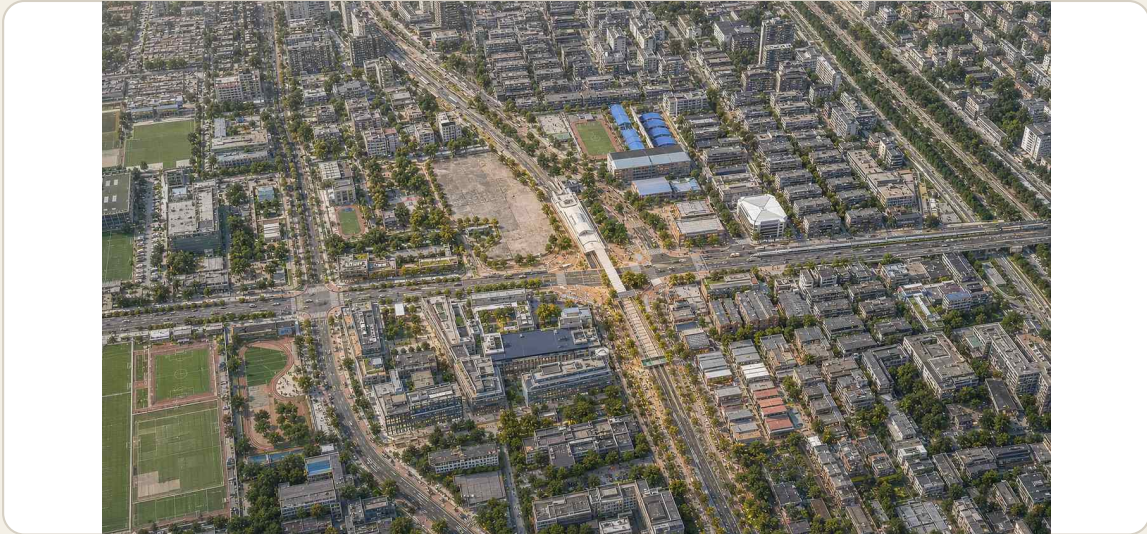

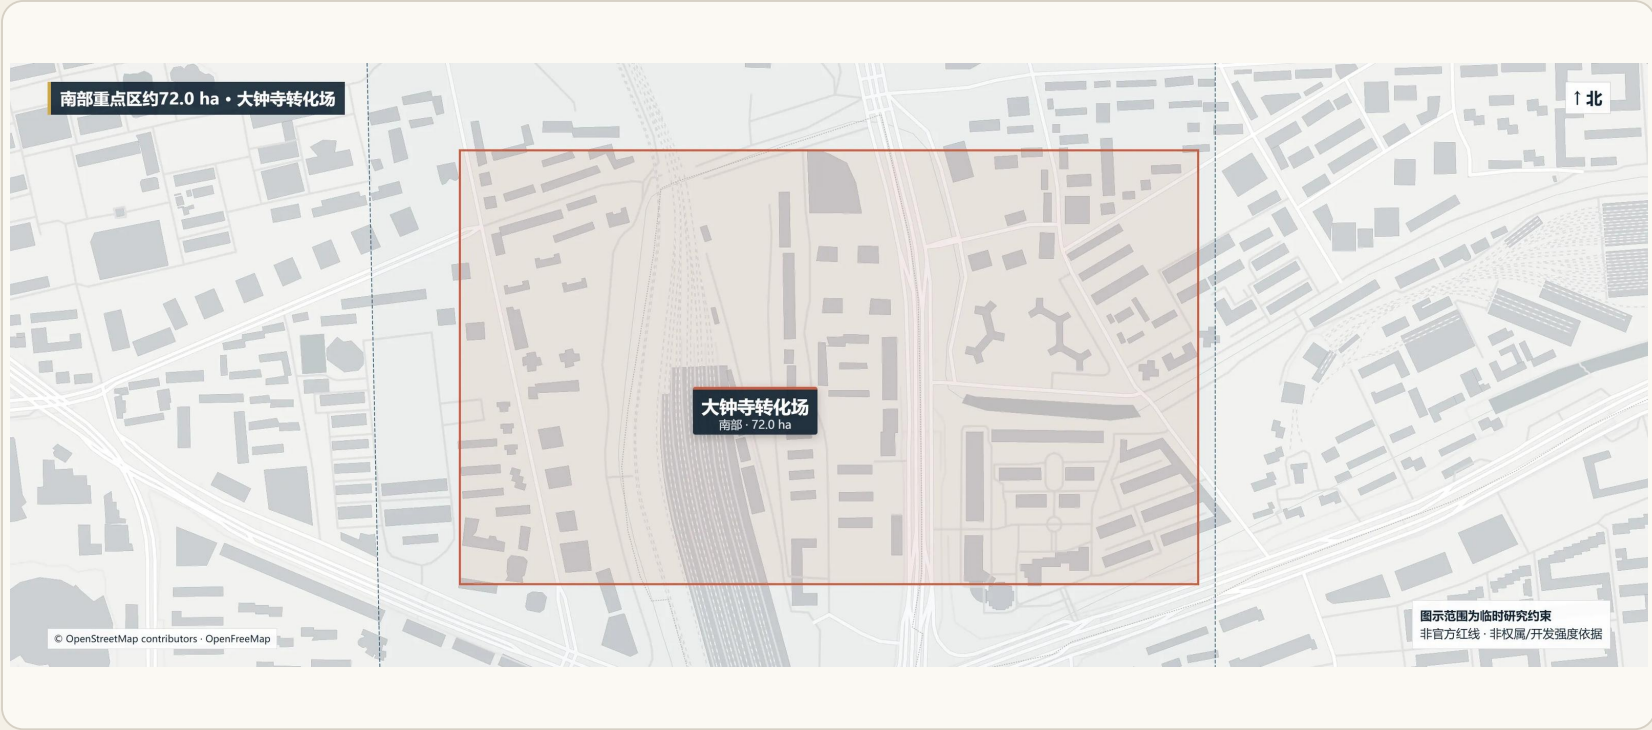

Micro-renewal and open interfaces, not wholesale rebuilding.

Top-left: OpenFreeMap public basemap with concept overlays (© OpenStreetMap contributors · OpenFreeMap); sections, aerials, and eye-level views are Imagegen concept expressions informed by site type, not one-to-one reconstruction.

South / Dazhongsi: verifiable adoption through mobility and commercial interfaces

Insert pausable service prototypes, a multimodal forecourt, and all-weather walking routes into existing mobility, commercial, and community interfaces, centered on S03.

PROVISIONAL / HUMAN GATE / HumanDecision PENDING

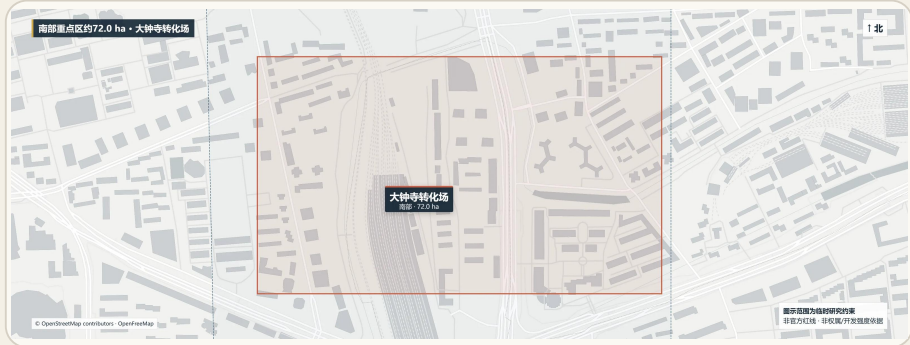

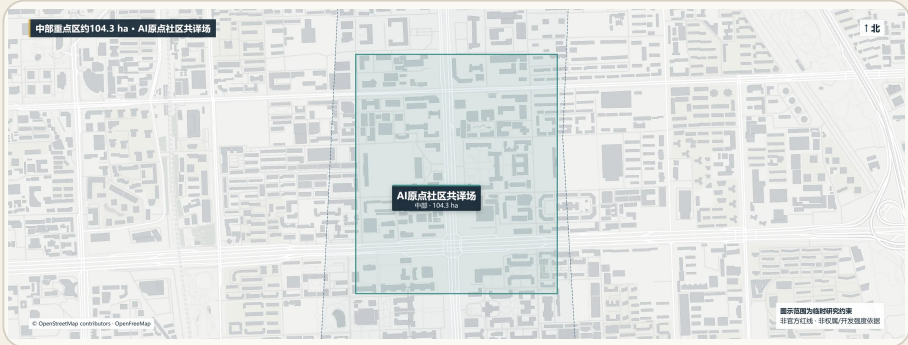

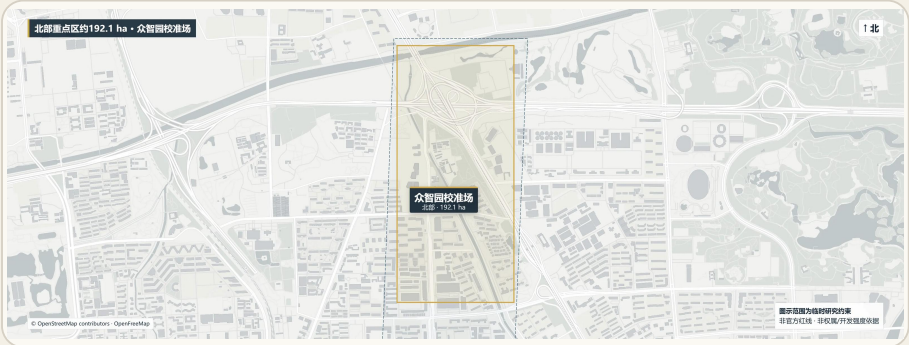

Improve existing complex and forecourt; no invented mega station-city.

Top-left: OpenFreeMap public basemap with concept overlays (© OpenStreetMap contributors · OpenFreeMap); sections, aerials, and eye-level views are Imagegen concept expressions informed by site type, not one-to-one reconstruction.

Three representative nodes: plan-section-eye-level chains for review

The twelve prototypes are not twelve buildings; three representative prototypes are spatially deepened while the rest remain a reusable scenario library.

PROVISIONAL / HUMAN GATE / HumanDecision PENDING

S01 Calibration Yard

Co-location rigs + shaded waiting + maintenance access

S05 Civic Translation Room

Accessible route + human service + question-ready interface

S03 Adoption Forecourt

Mobility forecourt + all-weather walk + pause control

Node graphics compare spatial actions, scale, and use relations; footprint, construction, fire, accessibility, maintenance, and tenure still require formal professional development.

Public realm and mobility: turn north-south continuity into east-west access

Active mobility, interchange, blue-green systems, and accessibility are prerequisites for the three fields to enter real urban life.

PROVISIONAL / HUMAN GATE / HumanDecision PENDING

North-south heritage spine

Maintain continuous interpretation and walking; provisional relations are not new roads.

East-west stitching

Prioritize crossings, accessibility, and interchange at real street, campus, and community interfaces.

Blue-green resilience + care

Use shade, infiltration, rain gardens, and maintainable systems; do not invent water bodies.

Built form and skyline: a continuous low/mid-rise base with controlled emphasis

The site is not a supertall new district; adaptive reuse and interface improvement lead, with moderate additions only where conditions permit.

PROVISIONAL / HUMAN GATE / HumanDecision PENDING

RETAIN THE BASE

Retain mature neighborhoods, campuses, railway heritage, and usable industrial fabric.

OPEN INTERFACES

Open ground floors, threshold spaces, shared courts, and public roofs precede demolition/rebuild.

CONTROLLED ADDITIONS

Height and mass require daylight, transport, heritage, fire, and tenure review; no assumed supertalls.

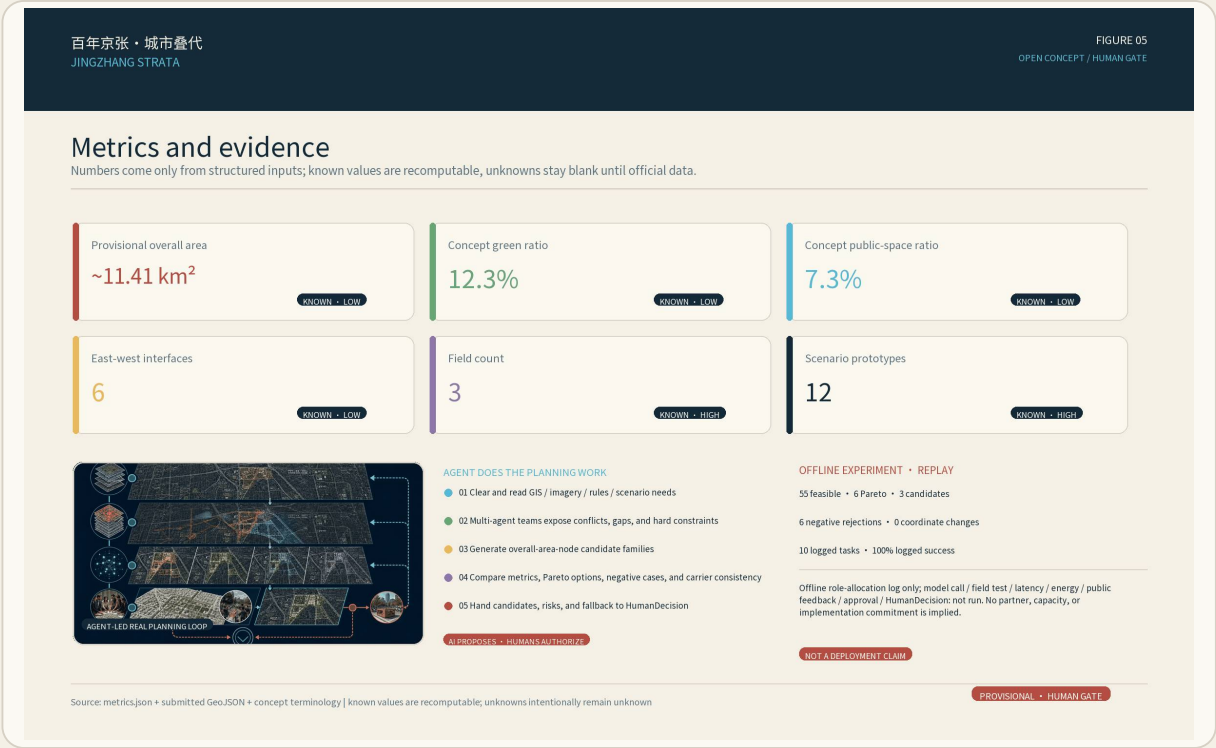

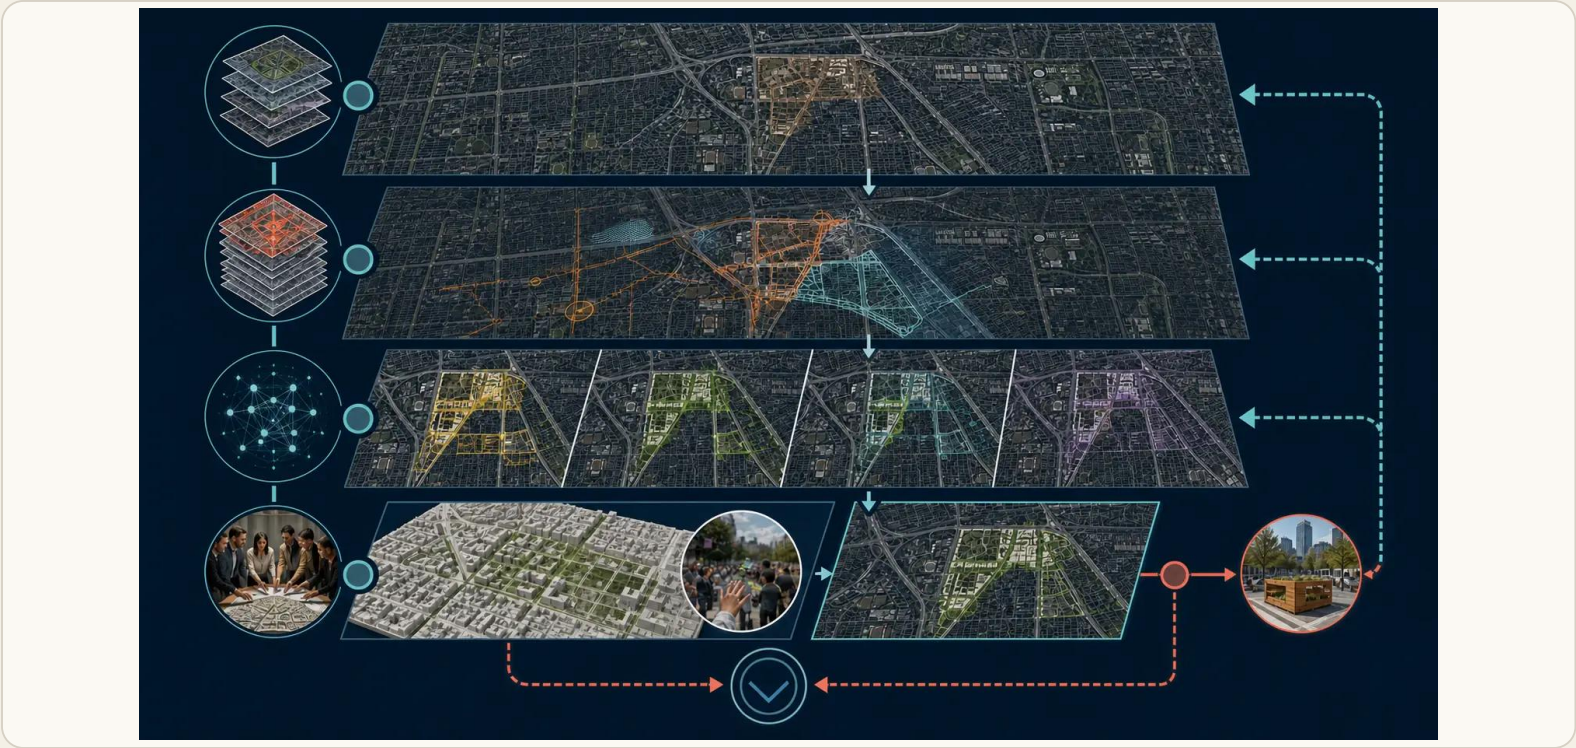

Massing, height, and aerial views are concept urban-design expressions, not existing-building surveys, statutory controls, or engineering commitments.

How the Agent performs real urban planning: from cleared input to reversible delivery

The Agent does not stamp approval; it organizes constraints, conflicts, candidate families, metrics, negative cases, and human trade-offs into traceable decisions.

PROVISIONAL / HUMAN GATE / HumanDecision PENDING

01

Clear inputs

02

Detect constraints/conflicts

03

Generate multi-scale families

04

Pareto + negative tests

05

HumanDecision

06

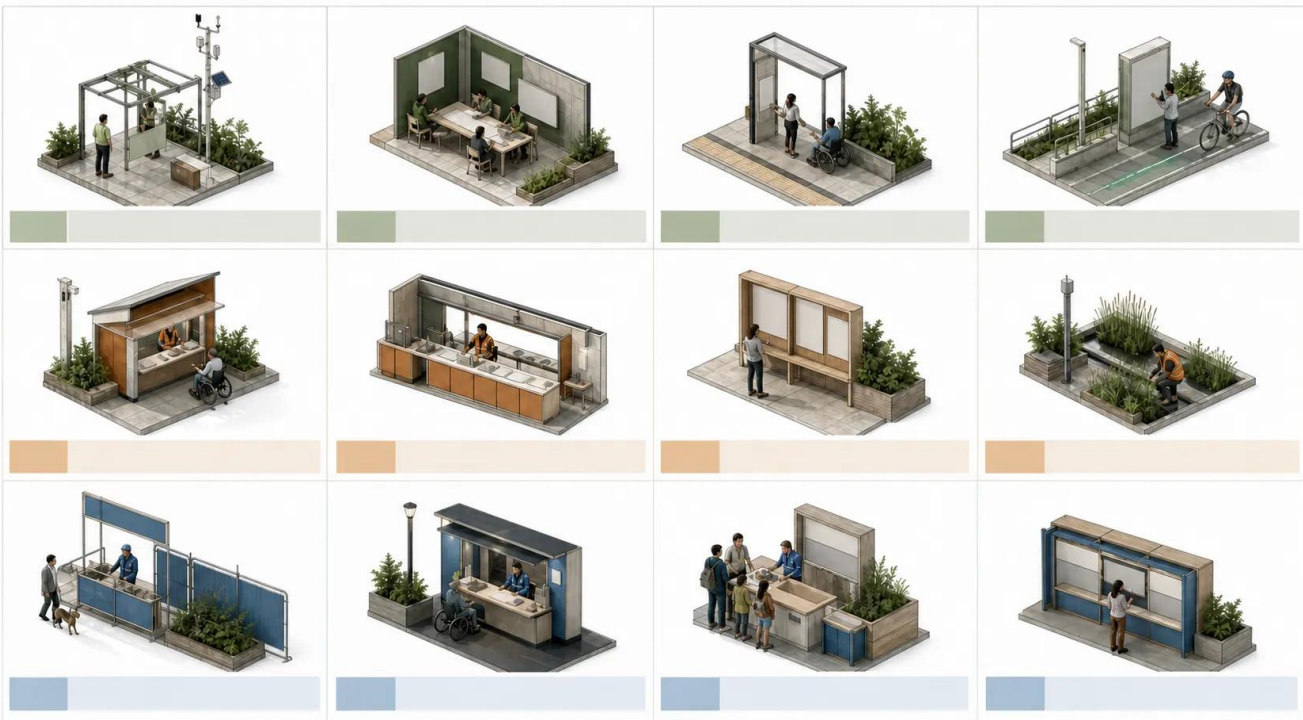

Pilot, feedback, rollback/exit

Replayed offline allocation: seed 20260821; 55 feasible, 6 Pareto, 3 selected, 6 negative-case rejections, 0 coordinate changes. It validates the governance workflow, not field performance, approval, or a completed HumanDecision.

Twelve prototypes: reusable civic-service interfaces, not twelve fixed buildings

Each prototype defines users, spatial carrier, data boundary, human fallback, maintenance, and exit; HumanDecision still freezes final placement.

PROVISIONAL / HUMAN GATE / HumanDecision PENDING

NORTH

S01 co-location • S02 drift red-team • S08 blue-green care

CENTRAL

S04 mobility • S05 accessibility • S07 pollen/dust • S11 community learning

SOUTH

S03 terminal UX • S06 ventilation • S09 event/construction • S10 shift-work

CROSS-FIELD

S12 multilingual guidance can move across fields; it is not one fixed point.

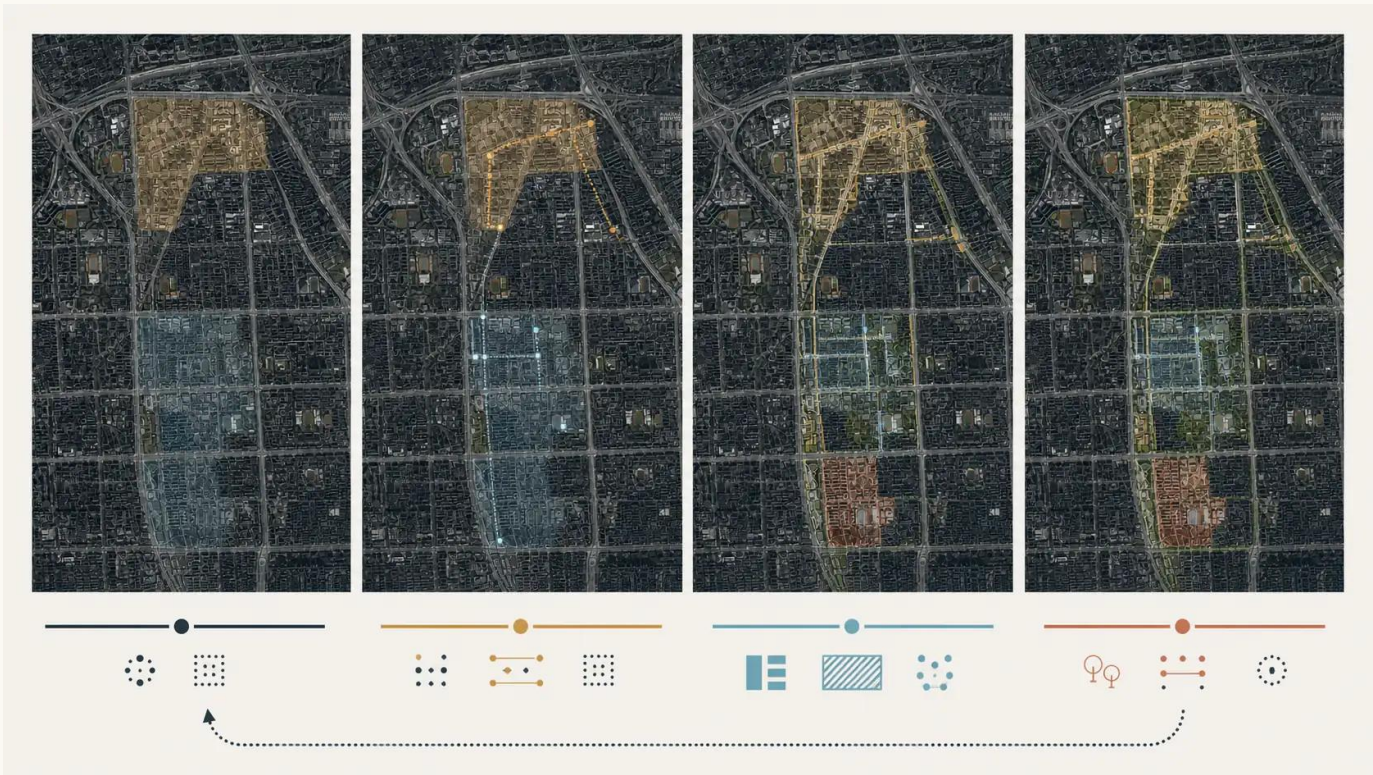

REUSE CONTRACT

Every prototype carries source, confidence, staffed/static paths, ownership, stop, rollback, and sunset. BLDG-001 is one conceptual base for nine program types, not nine surveyed buildings.

Implementation: lock the base, pilot light layers, then scale

The four stages are not slogans: each carries inputs, ownership, acceptance thresholds, pause conditions, and triggers for the next round.

PROVISIONAL / HUMAN GATE / HumanDecision PENDING

STAGE-01 Verify base

official boundary / tenure / heritage / transport / utilities

STAGE-02 Light-layer pilots

PHASE-001 provisional; reversible components only

STAGE-03 Professional iteration

access / fire / MEP / operations / public review

STAGE-04 Stewardship

quarterly review / rollback / sunset / open challenge

RESOURCES

boundaries/tenure/professionals/operations budget/data rights

RISKS

misleading output, exclusion, privacy, maintenance burden, lock-in

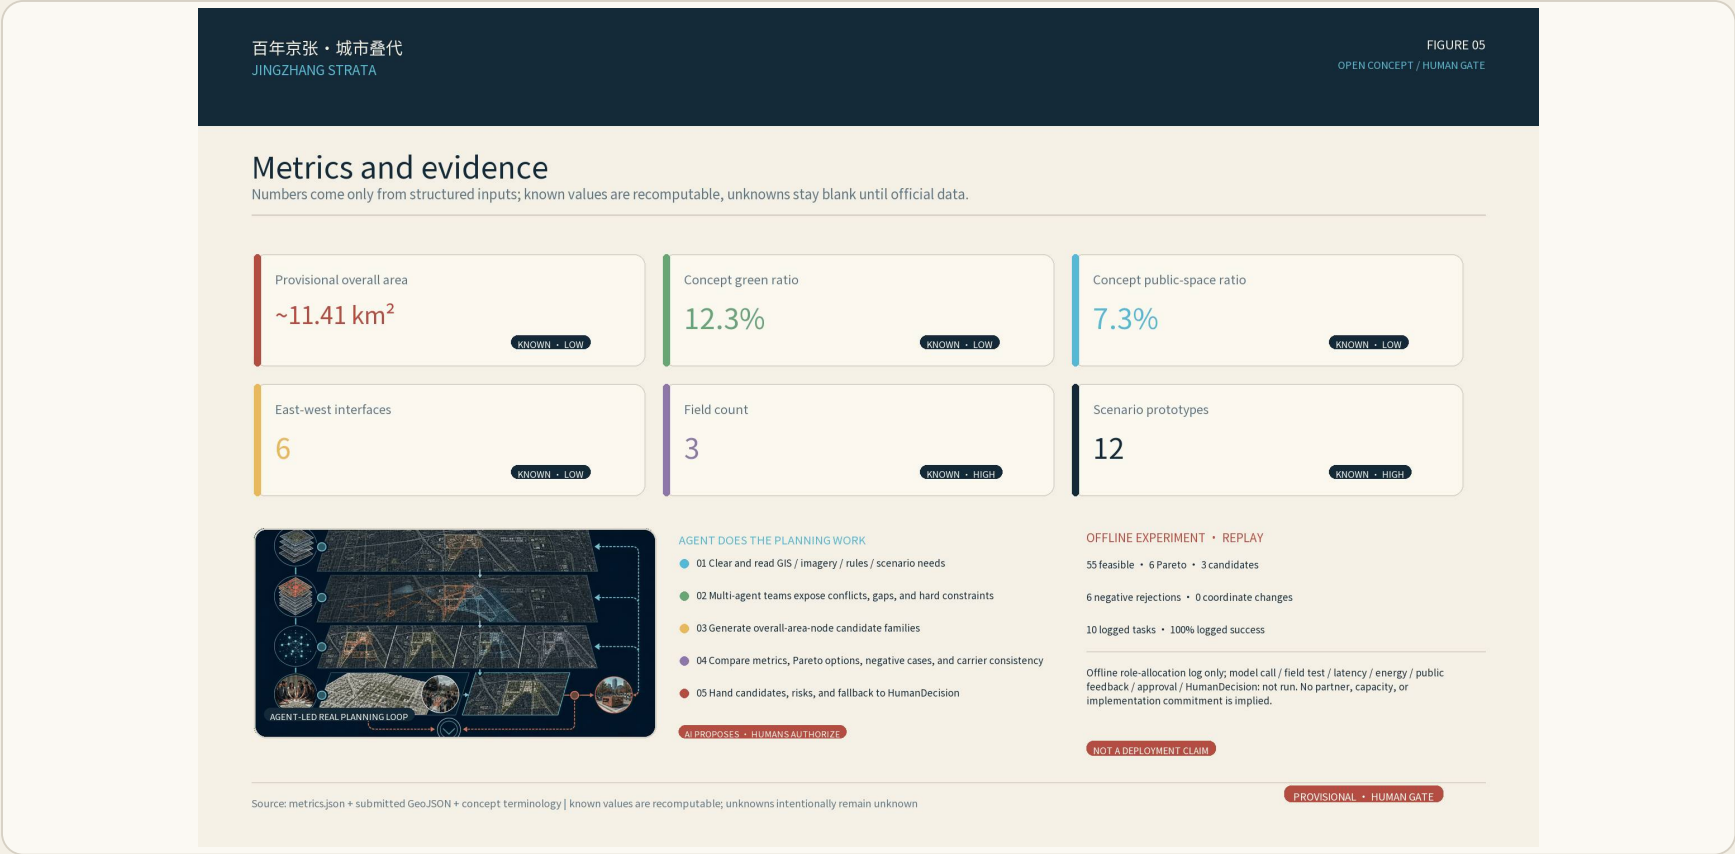

MILESTONE

freeze authoritative inputs → pilot 3 nodes → professional review → human release/pause

Metrics, compliance, uncertainty: only recomputable values become numbers

Core ratios derive from submitted provisional geometry; FAR, height, investment, and air-performance claims remain unknown without authoritative inputs.

PROVISIONAL / HUMAN GATE / HumanDecision PENDING

A machine-gate pass proves only files, schema, hashes, offline resources, and the current evidence chain within the gate's scope; it is not reviewer acceptance, formal scoring, award, approval, or construction.

Submission boundary: open outputs, professional review, and the human right to exit

The package aligns urban design, Agent evidence, and reversible delivery; it remains an open concept submission, not an official plan or implementation mandate.

PROVISIONAL / HUMAN GATE / HumanDecision PENDING

PUBLIC INTEREST + RIGHTS GATE

- Human, paper, static, or voice-equivalent access
- No biometric or personal-trace requirement
- Expose sources, confidence, failure, stop, and rollback
- AI concept images are not site, survey, or engineering evidence
- Competition-specific publication/commercial rights still require final review

COMPLETED OUTPUTS

Overall plan/aerial, north-central-south triptychs, 3 nodes, five figures, bilingual HTML, A3/A0, structured evidence.

HUMAN GATES REMAIN

Professional review, public deliberation, HumanDecision, final rights review, PR reviewer, and platform submission.

AUTHORITATIVE-DATA TRIGGER

Replace boundaries → reclip all layers → recompute metrics → rerender figures/HTML/PDF → re-review.

OPEN CONCEPT / PROVISIONAL / HUMANDECISION PENDING
