

The Jingzhang Rings · Urban Design

A 9.7 km technology-history axis and a 6.2 km ecological axis hold the Eight Great Colleges and Zhongguancun between them

① Slow-traffic network

Greenway length	40.3 km
Greenway count	22
Li plazas	19
Interchange / waterfront	17 / 11
Road centrelines	50

② Heritage clearance

★ Qinghuayuan Station (heritage)

Protection and class-I control zones drawn as conservative envelopes; minimum clearance from new volumes is 12.2 m, and new eaves inside the control zone stay under 9 m.

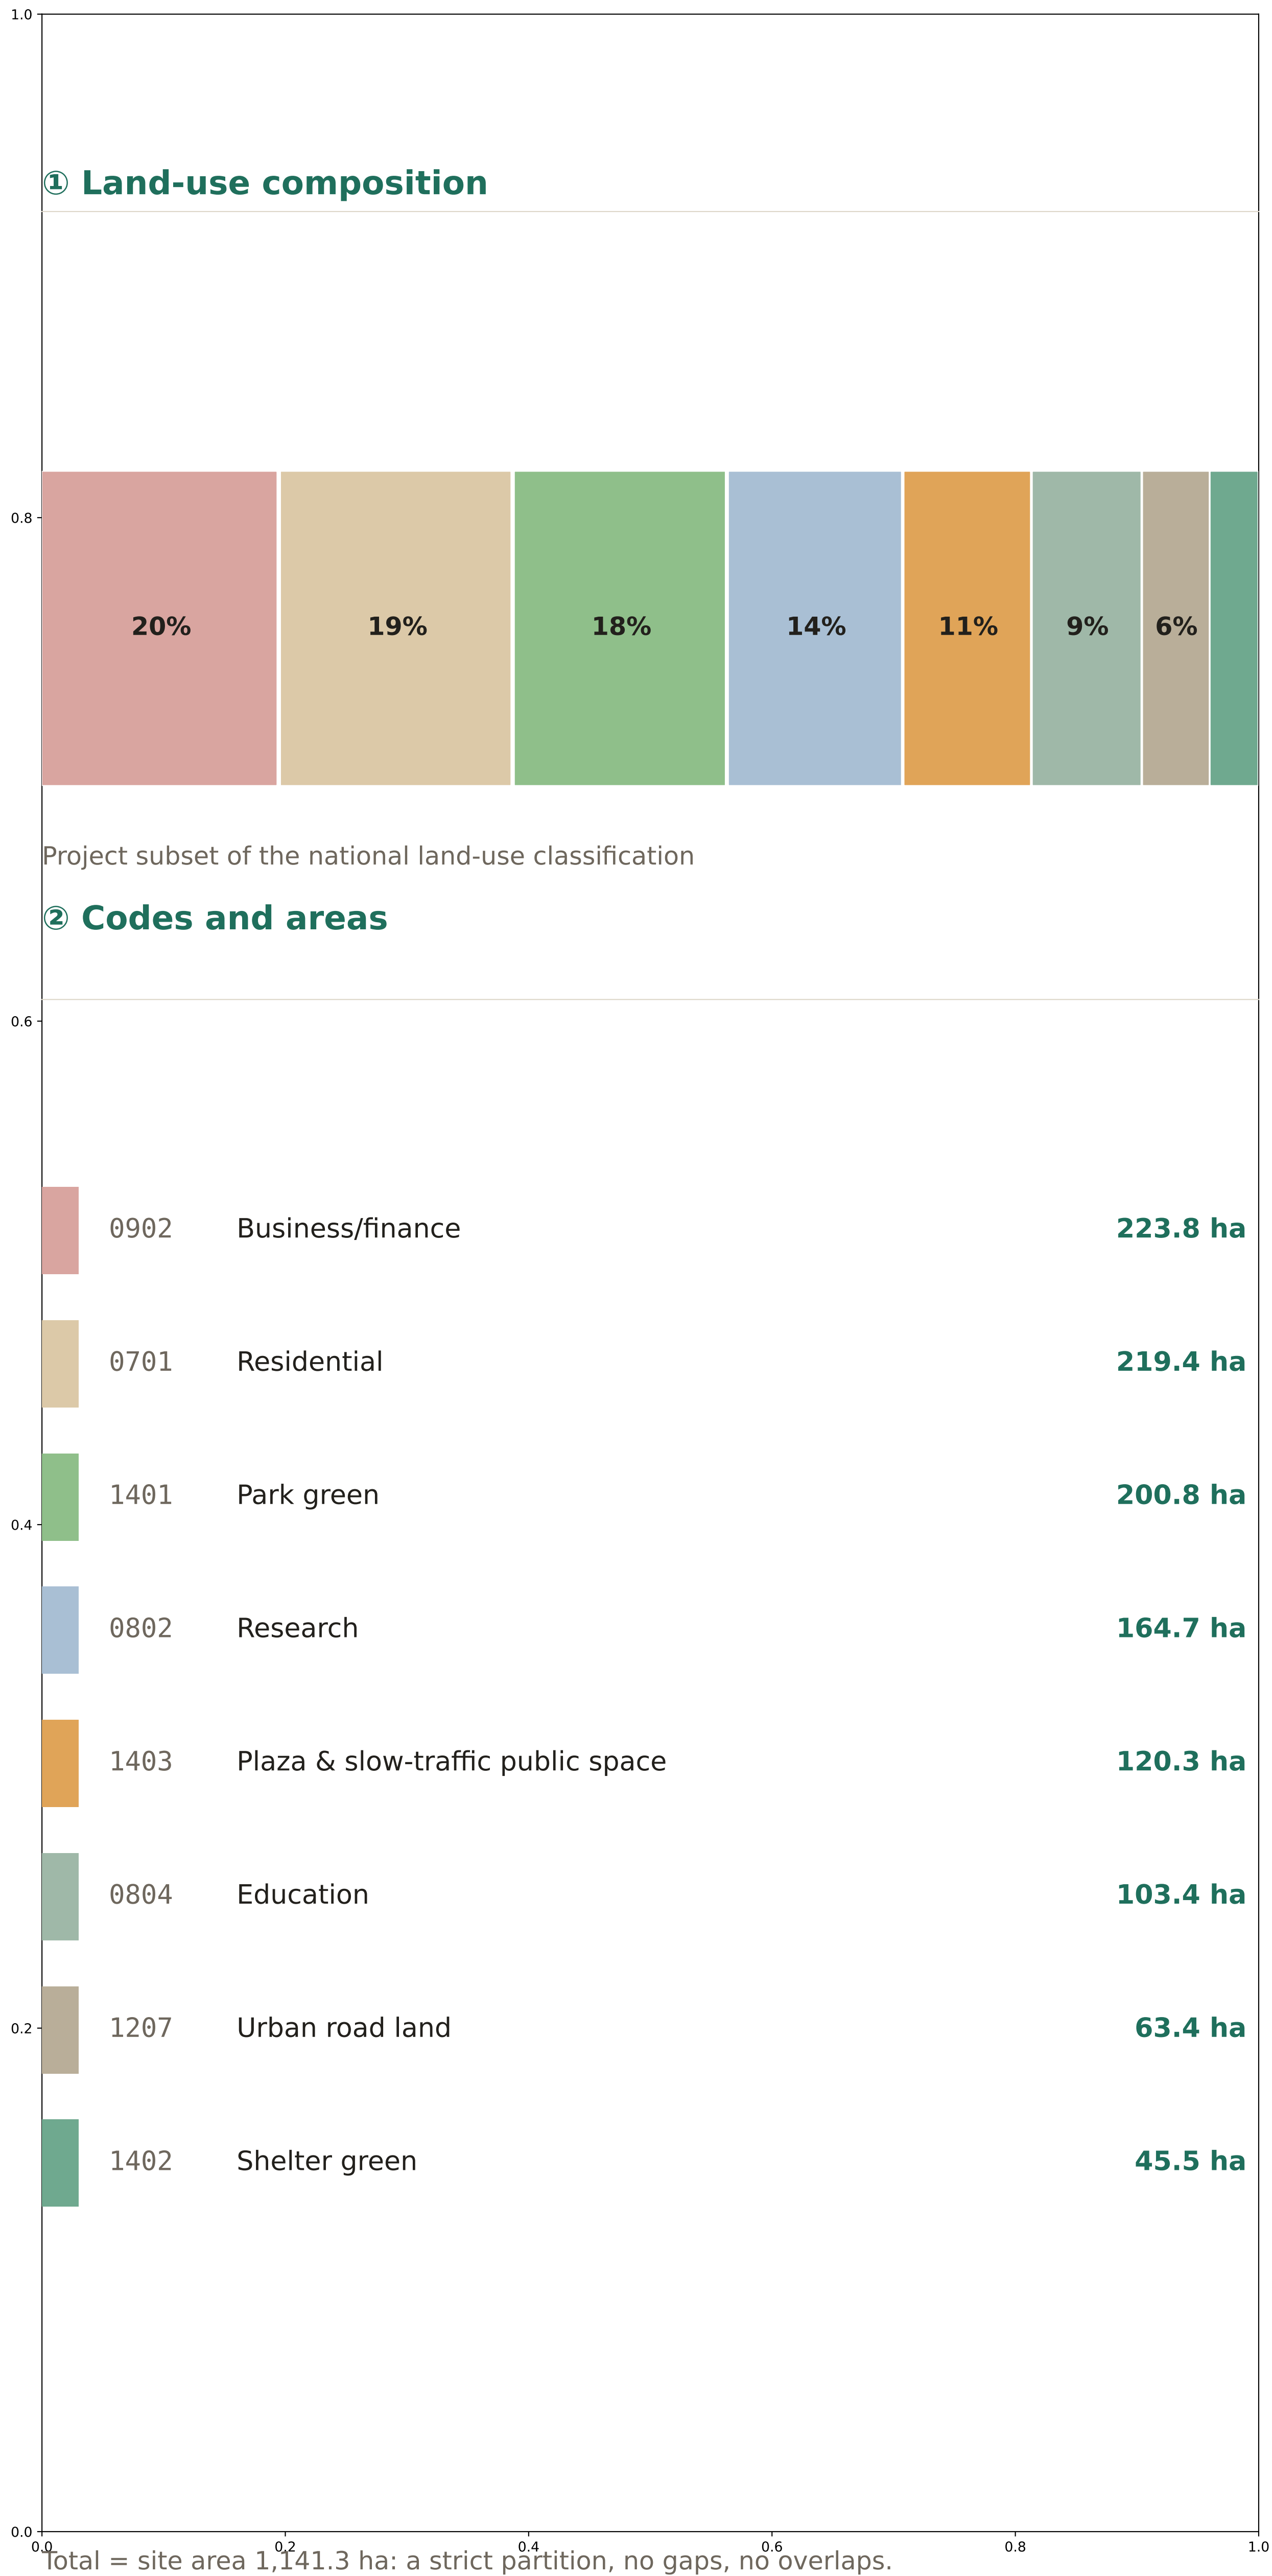

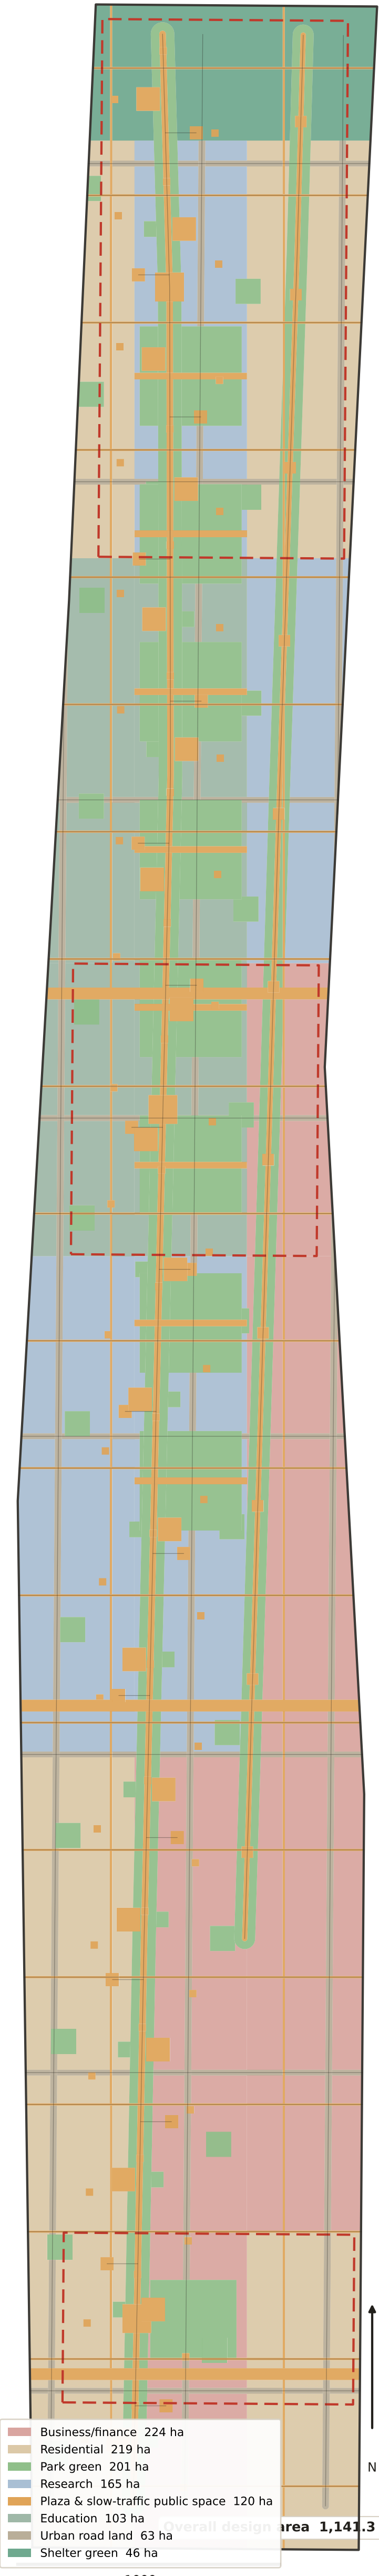

③ Test-road grading

Low-speed delivery and interchange-based speed limited, human-reinforced or campus redlines

The Jingzhang Rings · Land use and metric recomputation

Land use is a strict partition of the site: no gaps, no overlaps, areas recomputable

A · Recomputed from submitted geometry

A · Recomputed from submitted geometry

site_area	1,141,825.386	sqm	Official provisional boundary · EPSG:4548
green_space	2,463,013.830	sqm	union of green_space.geojson
public_space	1,203,476.584	sqm	union of public_space.geojson
building_footprint	15,155,006	sqm	37 new conceptual volumes
green_ratio	0.2158	ratio	green/site, not a statutory figure
public_space_ratio	0.1054	ratio	public space/site

C · Unknowns: left blank on purpose

- floor_area_ratio — regulatory controls missing, existing building stock unknown
- Height / density / setback / demolition / investment — conceptual advice only
- All areas and ratios must be recomputed once official polygons are released

B · Evidence chain: every number traces to a file
