

ZHANGHEN · JINGZHANG NARRATIVE WAYFINDING BELT

Cultural Storytelling Sign System Concept · One Belt, Three Stations: Reading—Walking—Listening

Metric evidence · counts, ratios and pilot thresholds separated

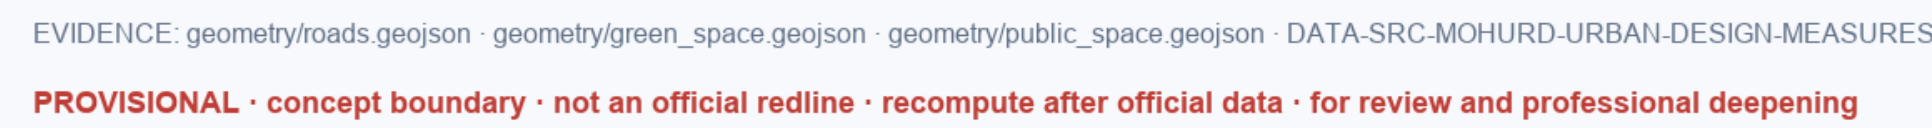

Geometry-recomputable metrics stay known/provisional; T1-T3 are participant proposals, not results

EVIDENCE: metrics.json · visual/assets/test_protocols.json · geometry/site_boundary.geojson · geometry/green_space.geojson · geometry/public_space.geojson

PROVISIONAL · concept boundary · not an official redline · recompute after official data · for review and professional deepening

Two public routes and convertible spatial components (concept diagram, not engineering alignments)

Green spine with park beads; daily / event / temporary conversion

Spatial types, road/rail/station clues and agent.4 public routes (concept diagram)

PROVISIONAL · concept boundary · not an official redline · recompute after official data · for review and professional deepening

Station: Signal Sound Pavillion
Type: Cross-street Slow Gateway + convertible station-front space
Operator: park team + merchant group; consumption/business test

Public route: read -> walk -> listen; human guides, paper/tactile boards and mute mode remain fallback

East-west stitch = Rail Heritage Stitch Promenade; north-south continuity = Cross-street Slow Gateway; the three key areas and Dazhongsi intelligent-native consumption/business gateway are explicitly mapped.

Pilot protocol matrix · T1-T3 and go/no-go

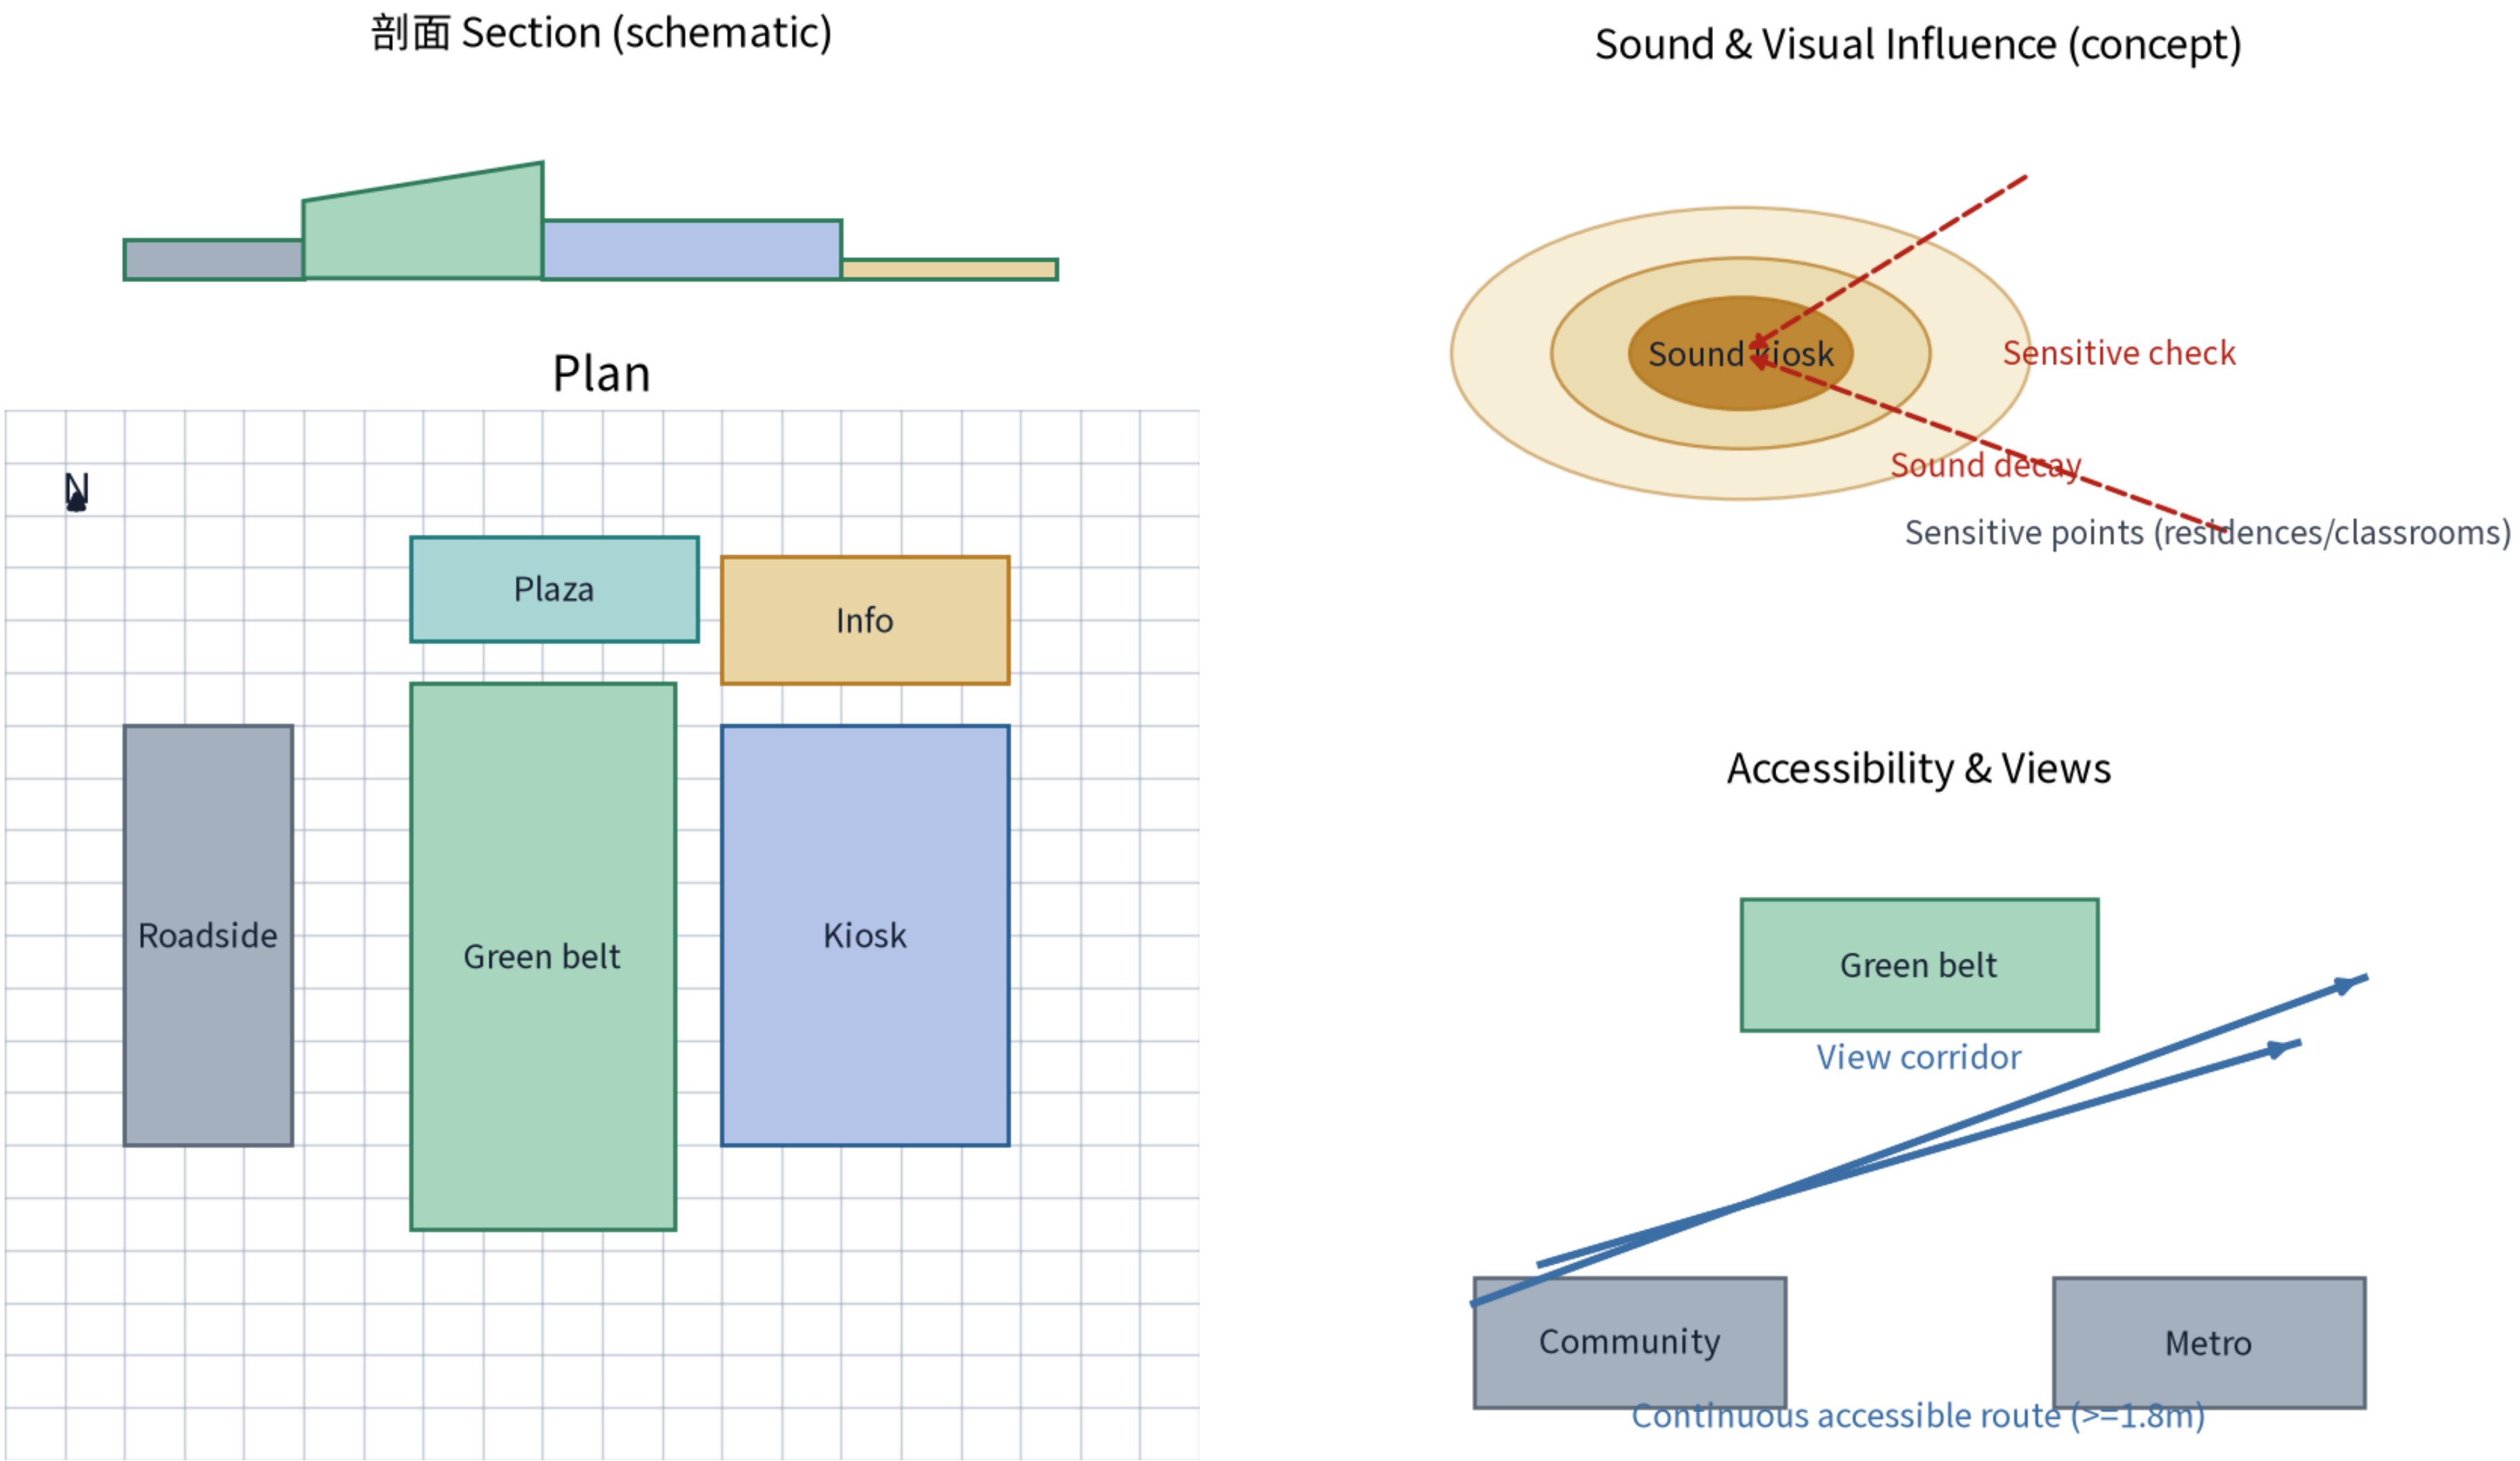

Participant-proposed · provisional · non-official; jointly confirm before launch

T1Visit conversion Zhongzhiyuan AI Autonomous Innovation Acceleration Area B 4 weeks + P 4 weeks · >=30 eligible groups each Formula: completed_visits / eligible_bookings; lift >= 10% Owner: park operator + university; miss or P0 -> NO-GO participant-proposed / provisional / non-official	T2Talent signal Beijing AI Origin Community B 4 weeks + P 4 weeks · >=30 valid questionnaires each; validity >=80% Formula: pilot_mean - baseline_mean; difference >= 0.20 points Owner: community council + university; miss -> redesign and rebaseline participant-proposed / provisional / non-official
T3Operations supply Dazhongsi AI Industry Cluster B 4 weeks + P 8 weeks · >=50 eligible work orders; rolling 2-week review Formula: 24h closure rate and false alarms; >=90% and <=5% Owner: park operations + merchants; 2-week miss or re-identification -> stop participant-proposed / provisional / non-official	GOgo/no-go gate Three-protocol joint gate Compute after T1/T2/T3 windows; formula: passed_protocols / 3 Threshold: 3/3 and zero privacy, heritage, accessibility or transport-safety P0 Owner: temporary review group + professional confirmation; any miss -> NO-GO participant-proposed / provisional / non-official

EVIDENCE: visualassets/test_protocols.json · proposal.en.md §Renewal Projects, Implementation Policy, and Phasing

PROVISIONAL · concept boundary · not an official redline · recompute after official data · for review and professional deepening

Storyboard Stop Deepening: Plan, Section, Accessible Route, View & Sound

Provisional - temporary conceptual boundary, not an official redline
Concept output: not for approval, engineering or precise-area use; recompute on official data

Participant-proposed protocols state baseline, sample, window, formula, numeric threshold, owner, provisional/non-official status and failure exit; they are not ready-made acceptance commitments.

Functional counts are separate from geometry ratios; provisional, not existing or statutory land use

PROVISIONAL · concept boundary · not an official redline · recompute after official data · for review and professional deepening

Numerator: union of six GREEN_SPACE features = 1,188,026 sqm
Denominator: SITE-001 union = 11,412,825 sqm
Ratio: $1,188,025.644 / 11,412,825.386 = 10.4096\% \approx 10.4\%$
The 6/27 code-1401 count is classification only, not the numerator.

The 27 features come from geometry/land_use.geojson; all are design_proposal and low-confidence.

The structure shows relative configuration only, not existing land use, green lines, tenure or approvals.

When official boundaries, green lines and statutory classes arrive, rerun the same union/classification caliber and refresh text, figures, HTML and A0/A3.

The 27 geometry/land_use.geojson features reconcile with six classification counts; green ratio, public-space ratio and overall area keep one geometry-recompute chain and refresh after official data.
