

Jing-Zhang Symbiotic Innovation Belt

A green public axis connecting everyday life with an AI future

Centennial Jing-Zhang AI Innovation Belt Open Call | Formal design package

Provisional design model | Not an official redline, statutory plan or engineering commitment

Overall Spatial Framework

One axis, three cores and four connections. Jing-Zhang is an open but controlled public interface, not a route every project must use.

Land Use and Renewal Structure

Existing space and green mobility come first. Any construction sequence is conditional on tenure, structure, fire safety, utilities and accountable operators.

F02 Spatial Actions and Renewal Structure

Five actions on a real base | Every action binds carrier, AI support and a decision gate

JING-ZHANG / 2026

AI × GREEN LIFE

Provisional design model | Not an official redline, key-area boundary or engineering decision | 2026-08-31

Three Key Areas

Zhongzhiyuan, Beijing AI Origin and Dazhongsi serve incubation, talent vitality and industry clustering without copying one AI-park formula.

Mobility, Blue-Green and Controlled AI

Walking, cycling, accessibility, metro and ordinary transit come first. T01-T03 supplement service only under controlled conditions; they do not replace choice.

Metrics, Evidence and Delivery Boundaries

Metrics test layers and formulas. Recalculate and decide only after official boundaries, controls, tenure and engineering conditions are available.
