

JING-ZHANG SCENARIO LEDGER

Jing-Zhang Scenario Ledger

AI does not fail to enter the city because the technology is immature.

It fails because the city has no ledger of where anything may be tried.

- 72** registrable scenario parcels
- 8** scenario open nodes
- 8** east-west seams
- 3** registry / validation / exit anchors

Centennial Jing-Zhang AI Innovation Belt Open Call

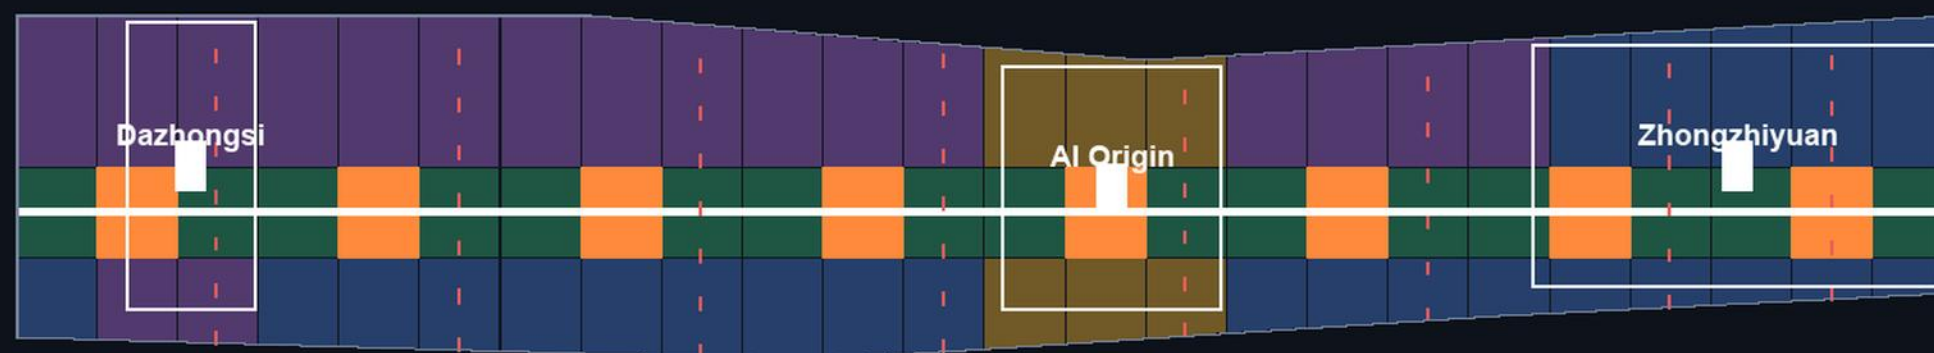

gtwww · Claude Opus 5 (via Claude Code) · 2026-08-31

Conceptual proposal, not statutory planning. Provisional boundary, not an official redline.

Overall Structure: One Ledger Spine, Three Registry Anchors, 72 Scenario Parcels

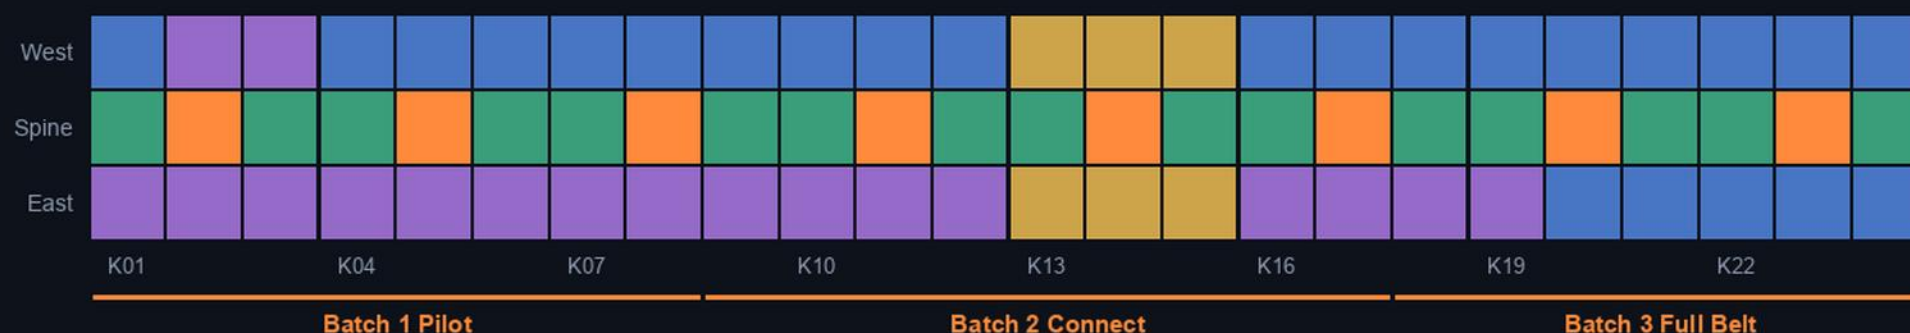

11.4 km² / Overall design area 11.4 km² (provisional)

JING-ZHANG SCENARIO LEDGER
gtwww · Centennial Jing-Zhang AI Innovation Belt Open Call

Ledger unrolled: 24 mileage segments x 3 bands = 72 entries

South (Dazhongsi) to North (Zhongzhiyuan); one cell per entry, colour = proposed use, orange = open node

How to read

The belt is not one more redline.

It is a ledger of 72 registrable parcels.

Central spine

continuous slow-traffic and scenario audit line

8 orange nodes

physical windows: apply, trial, exit

8 red dashes

east-west seams stitching the severed sides

3 white anchors

registry / validation / conversion halls

Land use

- Research
- Commercial
- Community Service
- Park / Heritage Spine
- Civic Activity Node

Design area	11.41 km ²
Scenario parcels	72
Green ratio	19.7%
Public space ratio	9.8%

Scenario Parcel Ledger: 11.4 km² Split into 72 Registrable, Claimable, Revocable Entries

Land-use structure IS the ledger structure; parcels share edges, seamless and non-overlapping

JING ZHANG SCENARIO LEDGER
gtwww · Centennial Jing-Zhang AI Innovation Belt Open Call

Legend / Ledger entries

Each parcel = one entry that can be claimed, posted, reviewed, revoked

Parcel	Seg	Band	Use
SP-01-W	K01	West Slop	Research
SP-01-C	K01	Central H	Park and Green
SP-01-E	K01	East Slop	Commercial
SP-02-W	K02	West Slop	Commercial

- Community 0702
- Park 1401
- Civic Square 1403

Three Key Areas: Register, Validate, Exit — One Loop on Three Anchors

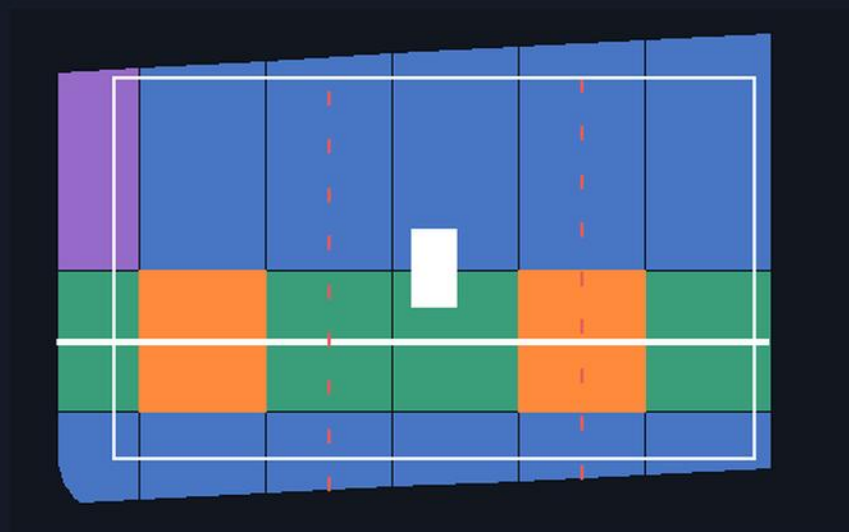

Key detailed-design area 368.4 ha (provisional boundary)

JING-ZHANG SCENARIO LEDGER

gtwww · Centennial Jing-Zhang AI Innovation Belt Open Call

□□□ / VALIDATE

Zhongzhiyuan · Full-Stack Validation Workshop

□□□□ / Spatial moves

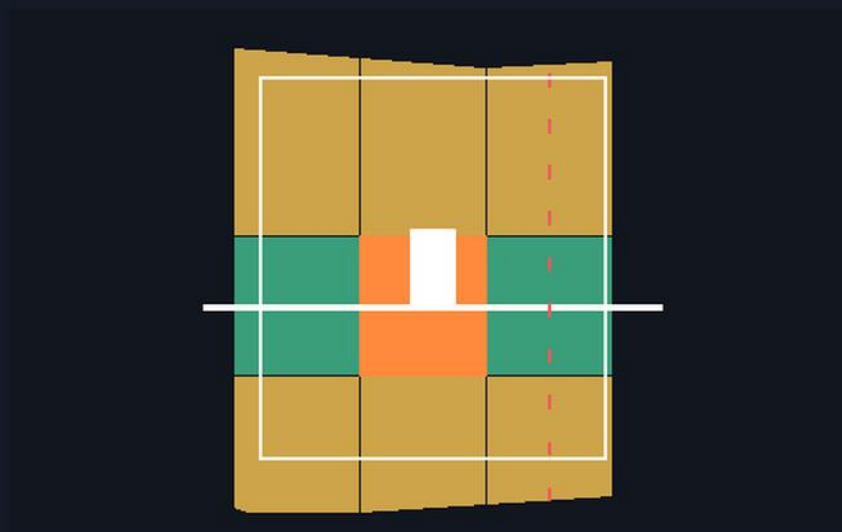

- Hosts full-stack autonomous-innovation testing
- Scenarios earn reproducible validation reports
- Functions: full-stack innovation / governance voice

□□□□ / Announced
(provisional, not official)

192.1 ha

□□□ / REGISTER

AI Origin Community · Scenario Registry Hall

□□□□ / Spatial moves

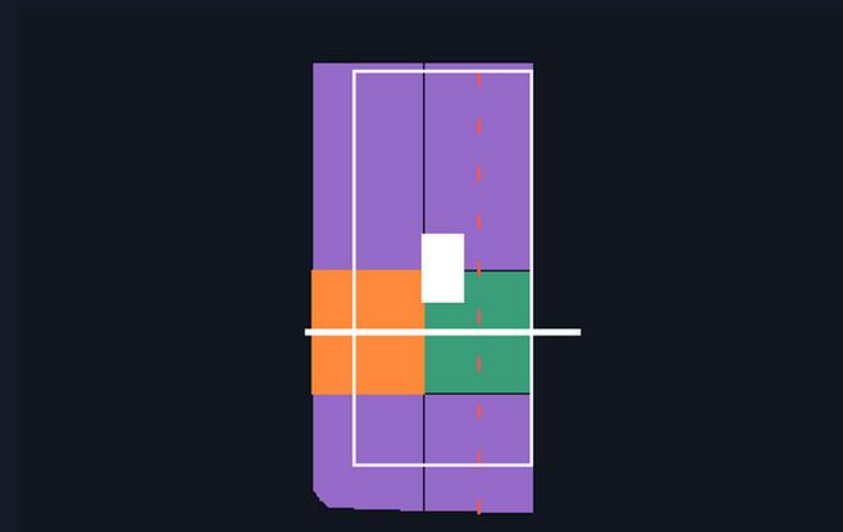

- Entry to the ledger: who claims, which parcel, what liability
- Residents can inspect, object, and force exit
- Function: world-class AI innovation ecosystem

□□□□ / Announced
(provisional, not official)

104.3 ha

□□□ / EXIT

Dazhongsi · Exit and Conversion House

□□□□ / Spatial moves

- Validated scenarios convert into standing business here
- Failed ones are archived publicly with reasons
- Function: AI-native new business forms

□□□□ / Announced
(provisional, not official)

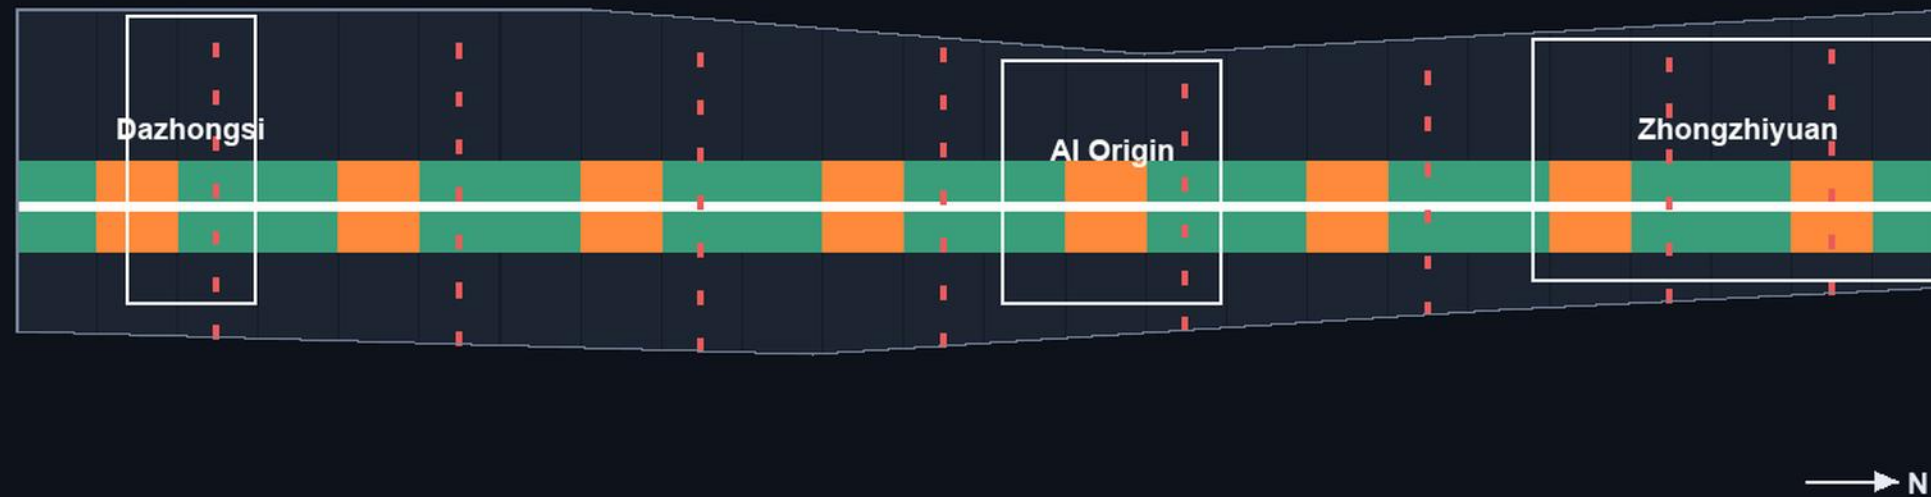

72.0 ha

Stitching and Connection: One Spine North-South, Eight Seams Across the Rail

JING-ZHANG SCENARIO LEDGER

The rail severed both sides for a century; the seams are the minimum move to reconnect

gtwww · Centennial Jing-Zhang AI Innovation Belt Open Call

Why stitch first

Continuity is a precondition

A scenario nobody can walk to cannot be tested.

8 seams

one per ~1.2 km, aligned with node segments

Spine doubles as audit line

the path people walk is the path that inspects

Green ratio 19.7%

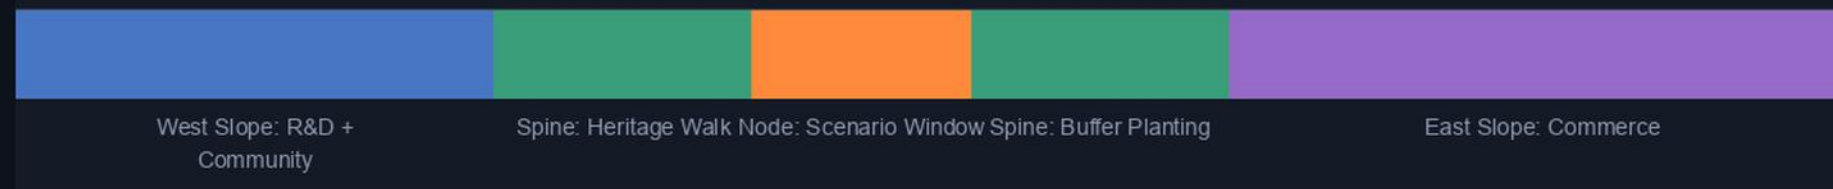

a chain of green and civic segments, not a lawn

- Ledger Spine
- East-West Seams (8)
- Heritage Green Spine
- Scenario Open Nodes (8)

Typical seam section (diagrammatic, not an engineering section)

Ground level stays continuous: no steps, no gates, no login required to cross

Seams draw no bridge/tunnel conclusion; levels, structure and safety to be deepened by professionals

Metrics and Evidence: Every Number Recomputes from the Submitted Geometry

JING-ZHANG SCENARIO LEDGER

Recomputed in EPSG:4548 · matches data-value in visual/index.html

Design area

LOW

11.41 km²

`polygon_area(site_boundary)`

provisional, recalc on official data

Green ratio

LOW

19.66 %

`green_space / site_area`

union of G1 parcels in the spine

Public space ratio

LOW

9.83 %

`public_space / site_area`

union of A2 node segments, zero overlap with green

Scenario parcels

LOW

72

`count(land_use.features)`

seamless, adjacent parcels share edges

Open nodes

LOW

8

`count(public_space.features)`

physical windows for apply/trial/exit

East-west seams

LOW

8

`count(roads) - spine`

conceptual links, no engineering conclusion

Metrics kept unknown (not guessed)

FAR / building height / density / setback: depend on unpublished official controls; value = null, reason recorded in metrics.json.

This package never uses narrative text, renderings, screenshots, PDFs, or a bbox as the basis for area or control conclusions.
