

CENTENNIAL JING-ZHANG AI INNOVATION BELT

# Aaron-XP2060

AI-RSI Future

Nature–Human–Machine City

Nature as foundation. Human agency as rule. AI  
that learns restraint.

AI-generated concept cover | not a photo, map, redline, or engineering source

# A future city is discussable only when sources and capability boundaries are explicit

- Only public/cleared sources in sources.json; no local knowledge base, private research, personal data, or credentials.
- Overall and key-area geometry is provisional and supports generation, self-check, and presentation only.
- Fiction supplies ethical tensions, not planning facts; NIST/UNESCO provide governance references only.
- Statutory controls, ownership, buildings, roads, utilities, heritage, ecology, and public-service baselines remain missing.

## NON-NEGOTIABLE BOUNDARIES

- no approved-planning claim
- no real-building demolition decision
- no engineering alignment or capacity
- no investment or government schedule
- no deployed or proven-safe RSI claim

# Translate civilizational imagination into civic principles—not copied worldbuilding

## ABUNDANCE

basic civic capability before spectacle

## COEXISTENCE

AI as a publicly governed trustee

## PLURAL HABITATS

digital, low-digital, and AI-off equivalents

## RESTRAINT

default non-interference and minimum necessity

## LONG HORIZON

reversible renewal and version governance

No novel text, characters, plots, proprietary names, ship/habitat designs, illustrations, trademarks, or publisher layout is copied.

# Six protocols jointly constrain space, services, and controlled RSI

**P0 HUMAN SOVEREIGNTY**

notice, refusal, human service, appeal, stop

**P1 NATURE LEDGER**

water, energy, carbon, heat, biodiversity budgets

**P2 AI COMMONS**

provenance, responsibility, interfaces, audit

**P3 RSI SANDBOX**

version, ceiling, red-team, approval, rollback

**P4 PLURAL HABITATS**

high-digital, low-digital, and AI-off equivalents

**P5 REVERSIBLE URBANISM**

existing assets, modularity, removable pilots

# One spine, three circuits, three cores, two wings, twelve touchpoints

Nature as foundation, human agency as rule, AI that learns restraint

Aaron-XP2060 | one spine · three circuits · three cores · two wings · twelve touchpoints

## ONE SPINE

1

A Nature - Human - Machine Protocol Spine combines ecology, walking, herit age, service, and accountability.

## THREE CIRCUITS

3

Natural metabolism, human commons, and trusted machine intelligence; the machine layer remains stoppable.

## THREE CORES + TWO WINGS

3+2

Controlled evolution, everyday coexistence, civic civilization, plus service and scenario coordination.

## TWELVE TOUCHPOINTS

12

Four industry tests and eight civic scenarios share notice, human service, ap peal, exit, and rollback.

Public brief + provisional geometry + original design reasoning. Dashed and pale boundaries are not official redlines.

## Nature first, human commons second, machine systems last

### Six land uses serve three protocol layers—not a colour-block masterplan

Nature foundation → human commons → stoppable machine systems

The conceptual partition covers the provisional boundary; it is neither approved land use nor statutory control.

# Controlled evolution, everyday coexistence, and civic civilization

Three cores carry different civic roles under one P0 - P5 protocol

Differentiated key areas | boundaries, scale, and engineering remain provisional

All three key-area polygons are provisional; content does not represent ownership, approved volume, or engineering.

# Every scenario must be understandable, human-takeover-ready, appealable, exitable, and reversible

## 01 Controlled RSI Model & Version Evaluation

INDUSTRY TEST | isolation, least privilege, independent review, physical stop

## 02 Low-Speed Embodied-AI Safety Loop

INDUSTRY TEST | isolation, least privilege, independent review, physical stop

## 03 Agent Interoperability & Cybersecurity Sandbox

INDUSTRY TEST | isolation, least privilege, independent review, physical stop

## 04 Green Edge-Compute Metabolism Lab

INDUSTRY TEST | isolation, least privilege, independent review, physical stop

## 05 AI-off Inclusive Mobility Guide

CIVIC / DAILY LIFE | minimum data, human service, appeal, exit

## 06 Human-in-the-Loop Health Navigation

CIVIC / DAILY LIFE | minimum data, human service, appeal, exit

Every scenario must be understandable, human-takeover-ready, appealable, exitable, and reversible

07 Adaptive Co-learning Studio

CIVIC / DAILY LIFE | minimum data, human service, appeal, exit

08 Public-Policy Simulation Forum

CIVIC / DAILY LIFE | minimum data, human service, appeal, exit

09 Jing-Zhang Cultural Evidence Guide

CIVIC / DAILY LIFE | minimum data, human service, appeal, exit

10 Biodiversity Sentinel & Habitat Care

CIVIC / DAILY LIFE | minimum data, human service, appeal, exit

11 Circular Resource Exchange

CIVIC / DAILY LIFE | minimum data, human service, appeal, exit

12 Public Contribution & Version Archive

CIVIC / DAILY LIFE | minimum data, human service, appeal, exit

## Continuous nature and walking first; machine nodes small, metered, stoppable

### Continuous nature and walking first; machine nodes stay small, metered, and stoppable

Natural-metabolism spine + east - west stitching + 12 reversible scenarios

#### NATURAL METABOLISM

Ecology, stormwater, thermal comfort, and walking precede digital devices.

#### HUMAN COMMONS

Paper, staffed, and AI-off routes remain equivalent to digital services.

#### TRUSTED MACHINE

Version, permission, energy, and incidents remain visible; on-site stop is physical.

#### TWELVE SCENARIOS

Four industry tests + eight civic scenarios; minimum data, human review, appeal, rollback.

All connections are conceptual; they do not establish road redlines, rail alignments, bridge feasibility, or utility capacity.

# Nine reversible project packages replace a one-shot blueprint with evidence gates

**P01**      **Protocol Spine sample**

small pilot → evidence review → accountable decision →  
expand/modify/exit

**P02**      **Controlled RSI Validation Garden**

small pilot → evidence review → accountable decision →  
expand/modify/exit

**P03**      **Protocol Zero Forum**

small pilot → evidence review → accountable decision →  
expand/modify/exit

**P04**      **Version Transparency Beacon**

small pilot → evidence review → accountable decision →  
expand/modify/exit

**P05**      **Coexistence Rings Garden**

small pilot → evidence review → accountable decision →  
expand/modify/exit

**P06**      **AI-off Mobility Network**

small pilot → evidence review → accountable decision →  
expand/modify/exit

**P07**      **Green Edge-Compute Pod**

small pilot → evidence review → accountable decision →  
expand/modify/exit

**P08**      **Nature Ledger & Biodiversity  
Sentinel**

small pilot → evidence review → accountable decision →  
expand/modify/exit

**P09**      **Public Version & Appeal Desk**

small pilot → evidence review → accountable decision →  
expand/modify/exit

**A system may propose candidate improvements; it may not alter production authority or scope**

---

## **RISKS THAT REMAIN UNDER CONTINUOUS REVIEW**

- capability jump
- goal drift
- evaluation gaming
- data leakage
- supply chain
- resource overuse
- irreversible dependence
-

# Recomputable is not approved; completeness counts are not quality scores

Recomputable is not approved: metrics, protocol gates, and accountability stay visible

GeoJSON → EPSG:4548 recomputation → matrices → bilingual artifacts → accountable review

Authority order: public/cleared sources → structured data → recomputation/matrices → explanation → accountable review.

## Human, ecological, and legal boundaries outrank efficiency and spectacle

### GOVERNANCE BOUNDARIES

- provisional geometry is not an official redline
- FAR, height, roads, utilities, and ecology stay unknown
- AI services retain staffed and AI-off equivalents
- production systems may not self-modify or self-expand
- authority

### COPYRIGHT & DATA ISOLATION

- fiction is acknowledged inspiration; protected expression is not copied
- core figures derive from GeoJSON, metrics, and matrices
- the cover is disclosed AI-generated concept art
- no local knowledge base, private research, personal data, or credentials
